<sup>44</sup> The feature film rules as they apply to broadcast subscription television are still in force, although the Commission has commenced a proceeding in which their deletion is also proposed. Notice of Proposed Rule Making in Docket 21311, FCC 77-436, \_\_\_\_\_ FCC 2d \_\_\_\_\_ (Adopted June 22, 1977).

are far smaller, and the duration of the contracts is shorter. The nature of the exclusivity sought by the networks is detailed in paragraph 3 above. Basically, the networks are granted exclusive use of the films under contract from the day the film is available for use until the last broadcast use permitted or until the end of the contract. The contracts also specify a fixed period, of between 60 and 180 days prior to the day when they may first be broadcast, during which time the film may not be broadcast by any other network or station, cable or pay cable television system. Although these contracts generally provide for exclusivity against other broadcast and cable television uses they generally do not appear to restrict theatrical or home video recorder use, or display in hotels, or on airplanes. Although only between 60 and 180 days of exclusivity in advance of the broadcast availability date is sought, this could mean a much greater period of time prior to actual broadcast. Up to a year or more could conceivably elapse between the time the film is contractually available for broadcast and the date it is actually broadcast.<sup>45</sup>

18. The consequences of these exclusivity practices for subscription television operations also are generally not disputed at this time. As new feature films are produced and complete their initial theatrical runs, virtually all are made available for subscription use. Although almost all films are made available for pay use, the duration of this availability is then controlled by sales of the films for network use and the exclusivity clauses of these contracts. When the network exclusivity terms come into force pay use is terminated. Thereafter, because of the influence of our former rules, be-

<sup>45</sup> These patterns of film exclusivity are taken from the comments filed in this proceeding as well as from testimony heard before the Subcommittee on Antitrust and Monopoly of the Senate Committee on the Judiciary. We note that the NCTA has asked that we obtain copies of the feature film contracts of the three national television networks for those films purchased in 1974 and those telecasts in 1974 and 1975. We have given serious consideration as to the need for an update of the information now available in order to be sure that this record in this proceeding is complete. It seems to us at this point, however, that the usefulness of this additional information would be limited. The exclusivity provisions of local station film contracts are, at least in the major television markets where our distant signal syndicated exclusivity provisions apply, available in the public inspection files of the stations seeking exclusivity and we have no indication of any change in the basic pattern of these feature film sales. As to network contracts, it seems likely that over time market forces may in fact bring about changes in the exclusivity sold, but the economic forces being brought to bear as the result of the elimination of the anti-siphoning feature film rules would not have already been reflected to any significant extent in contractual practices. Those rules were in force up until May of this year at which time it is apparent that the pattern described herein generally continued to be applied.

cause pay cable has been marketed primarily as a source of recent feature films, and because the major pay cable program supplier is nationwide in scope, the pattern is less easily known. Generally, however, it appears that feature films go from the network into the syndication market where they are sold on an exclusive basis to local stations. Some films remain unsold but these are generally the less desirable films. Sales of these older films to pay cable appear to have been limited by our former rules, by marketing problems, by the fact that a pattern of local sales in syndication makes it extremely difficult for a nationwide pay distribution such as Home Box Office to find product that is available for nationwide sale,<sup>46</sup> and, of course, by prior exclusive sales to local broadcasters.

19. As the comments in this proceeding reflect, the legal and policy judgments that should be drawn from these exclusivity practices and their consequences are contested. Cable interests find these contractual practices to be anti-competitive behavior in violation of antitrust law which results in a loss of television program diversity to the public and a retardation of the growth of the pay cable television industry. Broadcasters find the practices to be in conformity with existing antitrust precedent, necessary to protect the broadcast rights they have required, simply a reflection of the interplay of free market forces, and integrally related to the continued public interest in providing the public advertiser-supported conventional television broadcast service. Film producers view the situation somewhat differently with most believing that, over time, market forces will afford pay television operations an appropriate use of feature film product while others believe that the "oligopolistic" power of the networks prevents the market from operating freely and that the growth of pay cable will be retarded in the absence of effective regulation.

20. In our view, the best analysis of this whole issue is found in the comments filed in this proceeding by Paramount Pictures Corporation. In brief, Paramount concludes, and with this we agree, that market forces should be given an opportunity to find an appropriate place for feature films in the sequential media use of feature films, that the antitrust laws as currently interpreted and enforced should be sufficient to deter the unlawful exercise of market power, collusive behavior, and any other anti-competitive practices in the distribution of feature films to television, and that it is appropriate for the Commission to defer the adoption of rules until such time as there is some credible evidence that the structure of the marketplace, reinforced with appropriate antitrust

<sup>46</sup> An article in the May 25, 1977 issue of *Variety* (p. 1) headlined "Old Films to Ride Paycable Cycle, Rust to Index All TV License Expirations," illustrates the difficulties of purchasing older films for nationwide sale when the contract in each market has a different expiration date.

enforcement procedures, is insufficient to protect the public.

21. To impute improper motivation to current exclusivity practices would be, we believe, particularly inappropriate at this time in view of the fact that until recently our own rules, even in the absence of contractual exclusivity, provided broadcast television with a period of virtually complete "regulatory" exclusivity from subscription television feature films competition, and rules still in force, which apply in the distant signal context, continue to provide their own measure of exclusivity for syndicated television programming including feature films. See section 78.151 et seq.

22. Putting aside for the moment the purely antitrust aspects of this proceeding and concentrating on the more general public policy considerations, we are unable to conclude that there is sufficient evidence to warrant our acting either because existing exclusivity practices limit program diversity on subscription television operations or retard its growth. In this regard, we are mindful of the admonition of the Court in *Home Box Office* that "... regulation perfectly reasonable and appropriate in the face of a given problem is highly capricious if that problem does not exist."<sup>47</sup> It is not disputed that, almost without exception, every new feature film is available for subscription television use between its theatrical and network exhibitions and that the growth of the industry has been dramatic. The exclusivity purchased by the television networks does, of course, have an impact on the timing of pay exhibition. Although the question of timing clearly is of consequence, absent antitrust considerations, it provides far less reason for regulatory intervention than would the total unavailability of film product to the pay media.<sup>48</sup> Here, we believe policy grounds alone suggest that it is particularly appropriate to allow market forces a full opportunity to bring their influence to bear on distribution patterns before it is concluded that the pattern as it exists is the product of willful efforts to stifle the developing subscription industry or that the market is so burdened with concentrations of economic power that its own curative process will not take hold. We are mindful in this regard that the adoption of regulations to correct perceived deficiencies in the market brings with it its own deficiencies and penalties in the form of the rigidities of regulation and the necessity of continuing detailed oversight.

<sup>47</sup> *Home Box Office v. FCC*, supra, Slip. Op. at 52 quoting *City of Chicago v. FPC*, 458 F.2d 731, 742 (D.C. Cir. 1971), cert. denied, 405 U.S. 1074 (1972).

<sup>48</sup> In *Home Box Office v. FCC*, supra, in discussing our concern with the delay in film broadcast that might result from pay use, the Court made the following statement, after noting what it viewed as an absence of record evidence: "Moreover, we doubt that the Commission's interest in preventing delay of motion picture broadcast could be shown to be important or substantial on any record." Slip. Op. p. 81 (footnote omitted).

23. It should be noted, moreover, that the question before us when this proceeding was commenced was whether: Having restricted the use of programming of subscription television in order to conserve conventional television programming, should we then allow conventional television to further restrict the programming available to subscription television by demanding exclusive rights to programs? Or, does the public interest require, in addition to the anti-siphoning protection afforded conventional television, measures which limit or prohibit conventional television from excluding the subscription industry from access to programs which conventional television holds present or future rights to exhibit and where the danger of siphoning is not present."

24. As a result of the court's decision in *Home Box Office v. FCC*, supra, and the Commission's acquiescence in the decision insofar as it vacates the pay cable feature film's rules, a major impetus for this proceeding's commencement has been eliminated. However, in a recent pleading filed in this Docket after the close of the comment period," the NCTA warns that "as far as the broadcasters' appetite for exclusivity is concerned, the Court of Appeals' decision in the *Home Box Office* case ending the so-called anti-siphoning rules may only be expected to serve as a stimulant." In urging the Commission to "immediately convert" this inquiry to a rule-making proceeding, the NCTA claims that:

"The practical effect of broadcaster exclusivity practices is that, except during brief periods following their theatrical runs, popular feature films are simply not available on pay cable TV. (p. 3)

Referring to market-by-market, long-run exclusive sales of feature films to television stations—some of which films have been used by networks exclusively beforehand—NCTA concludes:

"Putting this much film product under restraint for so long leaves very little for pay cable to purchase. These widespread local practices not only tie up the most attractive films in most markets, but render pay cable networking of these attractive older films virtually impossible. (p. 15)

25. Whether by dint of its late filing or for other reasons, the numerous parties to this inquiry have not commented upon the NCTA pleading, and we do not intend to consider it in disposing of Docket 20402. It is worth noting, however, that the principal ground for NCTA's concern appears to have shifted over the time since its initial comments in the inquiry. In its earlier pleading, the industry group chose to limit itself "to the issue of the reasonableness of exclusivity in network contracts," explaining:

"First Report and Order in Docket 19554, FCC 75-369, 52 FCC 2d 1, paragraph 181 (1975).

"Suggestion of the National Cable Television Association for Compliance with the Court's Mandate in *Home Box Office v. FCC*," received July 14, 1977.

Under the previous [pre-1975] Commission feature film rules, pay cable's access was virtually limited to the newer films where network exclusivity was quite influential. Pay cable experience with exclusivity in syndication contracts has been minimal."

The association promised to address the latter issue in reply comments "should the exclusivity practices in syndication become apparent from comments in this proceeding." (Note 12, p. 9) However the reply comments it filed, received January 13, 1976, did not address these questions.

26. The NCTA has explained its decision to focus on network exclusivity in terms of the prior existence of FCC restraints which limited cable television's access to older films—those which had passed beyond or had been declined for network exhibition—quite apart from contractual exclusivity. Thus the industry association, in 1975, described a "minimal" experience with syndicated contractual exclusivity. We feel the same way today, even though two years have passed. That is, most of the period—until May of 1977—still has been affected by anti-siphoning rules. Now those rules are gone so far as feature films are concerned. Along with the majority of the film suppliers commenting in Docket 20402, we feel a need to look at 1977 and later developments in the absence of regulatory restraints. We would like to see whether the removal of the three- to ten-year moratorium will allow the claimed "theater-pay cable-network-syndication" sequencing foreseen by the suppliers to come into being. We would like to know whether pay cable networks, if offered films between theatrical and network or other broadcast exhibition, will be able to protect themselves contractually against premature "yanking" of those films arising from network clearance desires. Admittedly, the probable relatively slow fashioning of this sequence may not provide immediate help in gaining pay cable access to older films already in syndication and often under station contract in individual markets. But the difficulties here are partly technological, resulting in a disparity of phases in the pay cable and conventional television industries. That is, most pay cable is networked. But it is seeking to compete for older films which, so far as broadcasting is concerned, are in a post-network, syndicated, market-to-market phase of the sequence. Hence the problems described at Para. 18 and Note 9, supra, where pay cable networking may be denied access for a given film if that film already is under exclusive contract to stations in certain markets the pay network needs to reach.

27. We assume, however, that if the suppliers are right in their expectation of an immediate post-theatrical pay exhibition phase, the likely continued growth of the pay media, both cable and broadcast, will give them an increasing

"Comments of the National Cable Television Association, pp. 8-9, received December 1, 1975.

ability to bid for product in the later local marketing phase. We see no reason why a supplier or distributor of films in syndication would not take increasing account of prospective pay purchasers if the dollars were available. And that recognition of the new power in the market might affect not only price but also the means by which films are packaged and the degree of exclusivity granted for their exhibition. Present syndication practices, not surprisingly, are tailored to the needs of individual broadcast stations. But if broadcast and cable subscription television continue to grow, their needs increasingly should become important to suppliers and distributors.

28. Finding no present general public policy reason for intervention, outside of the antitrust considerations raised, we are mindful that we are not without responsibilities under these policies as well and that "competition is a relevant factor in weighing the public interest". *FCC v. RCA Communications, Inc.*, 346 U.S. 86 at 94 (1953). While the Communications Act does not empower the Commission "to decide antitrust issues as such," the Commission may under the standard of "public interest, convenience, or necessity" consider antitrust policy in the course of its regulation. *U.S. v. RCA*, 358 U.S. 334 (1959). Indeed, the relationship between the antitrust law and administrative law has been said to be a complementary one in which the "basic goal of direct governmental regulation through administrative bodies and the goal of indirect governmental regulation in the form of the antitrust law is the same." *Northern Natural Gas Co. v. F.P.C.*, 399 F.2d 953 at 959 (D.C. Cir., 1968).

29. Bearing in mind that it is not within our power to decide antitrust issues as such, it is appropriate that we pay close attention to those concepts in this proceeding. This is particularly so in view of the *Home Box Office* Court's agreement with our statement in Docket 19554, that the use of exclusivity clauses "raise[s] antitrust questions" and the statement of the Department of Justice in its response to comments on the proposed NBC consent decree that it was deleting this issue from the consent decree as a consequence of the Court's order in *Home Box Office* that the Commission consider and resolve the problem in this proceeding."

30. The focus of the commenting parties, insofar as they directed their attention to questions of antitrust policy, generally fell on the statement of the

"*Home Box Office v. FCC*, supra, footnote 4.

"See also the opinion of the Court in *U.S. v. CBS, et al.*, discussing the relationship between the Commission's role in regulating the television networks and the pending antitrust litigation. 39 RR 2d 1504 (C.D. Cal., (1977)). In this forum the networks were arguing that the problem was entirely one for Commission resolution and immune from application of the antitrust laws because subject to a pervasive scheme of agency regulation.

Court in *U.S. v. Paramount Pictures, Inc.*, 334 U.S. 131, 145, 147 (1948), which is quoted in the Notice in this proceeding, to the effect that exclusivity clearances are reasonable only "when not unduly extended in area or duration" and are not reasonable "if in excess of what is reasonably necessary to protect the licensee in the run granted." These concepts follow from application of the "Rule of Reason" to the strictures in Sections 1 and 2 of the Sherman Act against contracts in restraint of commerce and attempts to monopolize trade or commerce among the States. On the cable side of this debate the contention is heard that the contracts here in question are not of reasonable duration when compared to the exclusivity clearance clauses of a few weeks duration approved between first and subsequent run theatres in the *Paramount* case and that pay cable, having only 1/10th of 1 percent of the audience of network television and 1/10th the number of television households, is not in "substantial" competition with network broadcasting and thus exclusivity is either unreasonable or is per se unlawful without regard to the rule of reason. Moreover, it is argued that since exclusive contracts are disfavored in the law, the party seeking to justify such contracts must bear the burden of proving that his legitimate interests require such exclusivity and the networks have failed to do this and finally, that "upstream exclusivity" (exclusivity by a lower priced medium against a higher priced medium) cannot be sustained by reference to the *Paramount* standard in which the higher priced theatre sought and received protection against the lower priced theatre." Finally, the argument is made that even where restraints might otherwise be reasonable, they are not considered permissible under the antitrust laws if they result in a foreclosure of a large portion of the marketplace.

31. Network and broadcast comments focus on the issue of "reasonableness" and state that there are legitimate business reasons for the contracts entered into and, consequently, there can be no finding of unreasonableness. *Metromedia*, for example, states that stations must have exclusive right for a meaningful term (at least seven years) in order to build up an image of being the exclusive outlet for the type of product in question. In the joint comments of several television station licensees, it is said that, although free television and pay television generate revenues from different sources, they are direct competitors for audience and thus exclusivity between free television and pay television would appear to meet the test of reasonableness. ABC states that it has been advised by antitrust counsel that its

"According to calculation included in the comments of *Paramount Pictures*, the average price of a feature film on pay television is about 75 cents, from which the film producer derives about 35 cents. If \$800,000 is the average price paid by networks for feature films this translates into a value of 7 cents per home exhibition.

present exclusivity arrangements vis a vis pay television are reasonable. CBS notes that exclusivity is needed to protect the value of a broadcaster's license against dilution by previous or contemporaneous exhibition and that it might be compared to a prohibition, in a contract to sell a coal mine, against extraction of coal from the mine prior to delivery. NBC in its comments notes that the audience a network film showing can garner depends in large measure on the "glamor" and "freshness" of the product offered and that exclusivity to preserve that appeal from dilution by prior use is reasonable. The National Association of Broadcasters comments cite extensively to cases purporting to prove that exclusive contracts are legal and reasonable in the circumstances here involved. Broadcasters generally note that when feature film licenses are offered to broadcasters, the film suppliers are in absolute control of the timing.

32. However, with due regard for the learning contained in the various cases cited to us, it appears that the criteria for establishing the reasonableness of exclusivity provisions of television network and broadcast programming contracts vis a vis subscription broadcast and cable pay television are not established therein. This is so basically because the role of subscription television in its use of feature films remains to be established. In particular, it seems that much of the debate over how the law should be applied is a debate over whether pay television will end up simply as the equivalent of a slightly different type of broadcast entity or whether it will operate as a theatre that has, incidentally, been electronically extended into the homes of subscribers. Actual answers to these questions are only now beginning to be developed by a process of trial and error on the part of those actually involved in marketing subscription television services."

33. In making judgments on the reasonableness of exclusive contractual practices, such judgments must be grounded on the facts involved in the economic situation presented. In each instance, the determination of the legality of a practice alleged to restrain must rest upon factors such as (a) the conditions, marketing and other, existing or believed to exist in the industry involved, (b) the economic and business considerations leading to the adoption of the

"The magnitude of the uncertainties is made clearer when it is remembered that experiments with per-program charge systems of pay are just commencing and that the marketing of a contemplated second channel of older films has not yet commenced. It is also worth remembering that while it now seems to be conceded that it is appropriate for pay television use of feature films to follow after theatrical use, in the past it has been thought that films might have to be available "day and date" with theatrical release in order for subscription use to be attractive. Compare Fourth Report and Order in Docket 11279, FCC 68-1174, 15 FCC 2d 466, paragraphs 28-29 (1968).

practice, and (c) the end sought to be attained."

34. In view of the uncertainties as to the likely developmental path of the subscription industry, this is a singularly poor time for us to attempt to answer these questions or for us to call upon the various industries to answer them, for the result of such an exercise would inevitably involve us in speculation rather than fact finding. Accordingly, for the time being, we believe it appropriate to leave the resolution of these questions to the courts and to the marketplace. We will, therefore, terminate this proceeding at this time without further action.

35. In taking this action, however, two additional points should be made quite firmly. First, we are strongly influenced in our analysis, and in our feeling that it is not necessary to pursue the antitrust issues to their ultimate conclusion, by a belief that subscription television is developing and will continue to develop without our intervention. Evidence to the contrary would be grounds for our reopening this proceeding. Second, it is our belief that over the long run some accommodation in the marketplace will be made so that the public is provided a choice between pay and advertiser-supported television. The statement of ABC in its petition for stay of the *Home Box Office* mandate to the effect that "the free television industry may be induced to seek greater exclusivity for particular product" if the subscription product regulations are eliminated, has been cited to us as evidence that, if left unregulated, the market will restrict rather than expand the availability of product for pay use. We would find such an occurrence deeply troubling and intend to review the situation from time to time both to ascertain whether such a development is occurring and to determine whether further action on our part may be necessary.

Accordingly, it is ordered, That the proceedings in Docket 20402 are terminated, without prejudice to the proceeding, or a similar one, being reopened as future developments may warrant.

FEDERAL COMMUNICATIONS COMMISSION,  
VINCENT J. MULLINS,  
Secretary.

FEDERAL ENERGY  
ADMINISTRATIONCASES FILED WITH THE OFFICE OF  
EXCEPTIONS AND APPEALSWeek of September 2 Through  
September 9, 1977

Notice is hereby given that during the week of September 2 through September 9, 1977, the appeals and applications for exception or other relief listed in the Appendix to this Notice were filed with the Federal Energy Administration's Office of Exceptions and Appeals.

APPENDIX—List of cases received by the Office of Exceptions and Appeals—Week of  
Sept. 2 through 9, 1977

Date	Name and location of applicant	Case No.	Type of submission
Sept. 2, 1977	Feconizer Pump Co., Casper, Wyo. (If granted, 26 producing wells would receive an exception to the provisions of pt. 212, subpt. D in connection with a field test of the Feconizer pump.)	FEE-4779	Price exception (pt. 212, subpt. D).
Do	Moore and Miller, Oklahoma City, Okla. (If granted: The consent order issued by FEA region VI on May 6, 1977, would be modified to eliminate the requirements that interest be included in refunds to be made on overcharges in its sales of crude oil.)	FEE-4782	Exception from the consent order issued by FEA region VI on May 6, 1977.
Do	South Hampton Co., Washington, D.C. (If granted: South Hampton Co. would receive an exception from the provisions of 10 CFR 211.500-3.)	FEE-4778	Exception from the provisions of 10 CFR 211.500-3.
Do	Sun Co., Inc., Dallas, Tex. (If granted: Sun Co., Inc. would receive an extension of the exception granted in the FEA's Apr. 4, 1977, decision and order and would be permitted to increase its prices to reflect nonproduct cost increases in excess of \$4.05 per gallon for natural gas liquid products produced at its Jack, Tex., (including Fordeche, Macomber, P. 1601, and Victoria plants.)	FEE-4780- FEE-4785	Extension of the relief granted in Sun Co., Inc. case Nos. FEE-3904, 3911, 3913, 3916, 3941, 3943 (decided Apr. 4, 1977) unreported decision.
Do	Leo G. Withenell, Jr., Kansas City, Mo. (If granted: The FEA's Aug. 5, 1977, remedial order would be modified to relieve Leo G. Withenell, Jr. of the requirement that interest be paid to the Koch Oil Co. on overcharges made on sales of crude oil.)	FRA-1463	Appeal of FEA's Aug. 5, 1977, remedial order.
Sept. 6, 1977	Chevron U.S.A., Inc., San Francisco, Calif. (If granted: Chevron U.S.A., Inc. would receive an exception from special rule No. 9 and would not be required to supply Plateau with 1,800 BPD of Altamont crude during the month of September 1977.)	FEE-4786 FES-4786	Exception from the crude oil buyback program, stay request.
Do	Cotton Petroleum Corp., Tulsa, Okla. (If granted: The remedial order issued by FEA region VI on Aug. 26, 1977, would be rescinded and Cotton Petroleum Corp. would not be required to refund overcharges made in its sales of crude oil produced from the North Goose Lake unit.)	FRA-1460 FES-1460	Appeal of the remedial order issued by FEA region VI on Aug. 26, 1977; stay request.
Do	Estate of George H. Coates, Dallas, Tex. (If granted: The estate of George H. Coates would receive an extension of the relief granted in the FEA's Mar. 11, 1977, decision and order and would be permitted to increase its prices to reflect nonproduct cost increases in excess of \$3.05 per gallon for natural gas liquid products.)	FEE-4790	Extension of the relief granted in Estate of George H. Coates, case No. FEE-3647 (decided Mar. 11, 1977) (unreported decision).
Do	Martin Exploration Co., Metairie, La. (If granted: Martin Exploration Co. would be permitted to sell the crude oil produced from the Wilcox B sand unit located in Beauregard Parish, La., at prices in excess of the lower tier ceiling price.)	FEE-4789	Price exception (sec. 212.73).
Do	Victor E. Saere, Lewiston, Maine (If granted: Mr. Saere would be assigned a new, lower priced supplier of motor gasoline to replace his base period supplier, F. & M. Oil Co.)	FEE-4787	Exception to changes suppliers.
Do	Tenneco Oil Co., Houston, Tex. (If granted: Tenneco Oil Co. would be permitted to sell the crude oil produced from the State lease 3706 located in St. Mary Parish, La., at prices in excess of the lower tier ceiling price.)	FEE-4788	Price exception (sec. 212.73).

## NOTICES

Date	Name and location of applicant	Case No.	Type of submission
Sept. 7, 1977	Farmers Gas and Oil Co., Lithia, Mich. (If granted: The FEA's Aug. 12, 1977, stay decision would be modified by eliminating the condition that certain monies be placed into an escrow account.)	FER 0125	Modification of decision and order in <i>Farmers Gas and Oil Co.</i> , 6 FEA par. — (Aug. 12, 1977).
Do	Great Western Drilling Co., Midland, Tex. (If granted: Great Western Drilling Co. would receive an extension of the exception relief granted in the FEA's Apr. 29, 1977, decision and order and would be permitted to increase its prices to reflect nonproduct cost increases in excess of \$0.05 per gallon for natural gas liquid products produced at its Permian and West Seminole plants.)	FEX 4793 FEX 4794	Extension of the relief granted in <i>Great Western Drilling Co.</i> , case No. FEX-3910 and FEX-3921 (decided Apr. 29, 1977) (unreported decision).
Do	Standard Oil Co. (Indiana), Chicago, Ill. (If granted: The Office of Private Grievances and Redress would reverse FEA region V's Aug. 23, 1977, decision and order which affirmed a Nov. 26, 1976, assignment order requiring Standard Oil Co. (Indiana) to supply Wayne Co. (Indiana) with motor gasoline.)	FSR 0455	Petition for special redress.
Sept. 8, 1977	Carter Exploration Co., Corpus Christi, Tex. (If granted: The remedial order issued by FEA region VI on Aug. 9, 1977, would be rescinded and Carter Exploration Co. would not be required to refund overcharges made in its last sales of crude oil produced from the A. Trevino lease.)	FRA 1464 FRS 1464	Appeal of the remedial order issued by FEA region VI on Aug. 9, 1977; stay request.
Do	Continental Oil Co., Houston, Tex. (If granted: The FEA's Office of Regulatory Programs order would be rescinded and Continental Oil Co. would be permitted to use multiple-allocation fractions for kerosene base jet fuel.)	FEA 1462	Appeal of FEA's Office of Regulatory Programs order.
Do	Florida Gas Co., Houston, Tex. (If granted: The FEA's Aug. 3, 1977, decision and order would be rescinded and Florida Gas Co. would be permitted to increase its prices to reflect nonproduct cost increases in excess of \$0.05 per gallon for natural gas liquid products produced at its Brookier plant.)	FEX 1159	Appeal of the decision and order in <i>Florida Gas Co.</i> , case No. FEE-3745 (decided Aug. 3, 1977) (unreported decision).
Do	Nordam and Co., San Antonio, Tex. (If granted: The remedial order issued by FEA region VI on Aug. 19, 1977, would be rescinded and Nordam and Co. would not be required to refund overcharges made in its sales of crude oil produced from the L.A. O'Connor-Thomas estate lease.)	FRA 1457 FRS 1457	Appeal of the remedial order issued by FEA region VI on Aug. 19, 1977; stay request.
Do	Sabre Refining, Inc., Bakersfield, Calif. (If granted: The July 5, 1977, decision and order would be modified to further reduce Sabre Refining's entitlement purchase obligations.)	FMR 0125	Modification of the decision and order in <i>Sabre Refining, Inc.</i> , 6 FEA par. 83,031 (July 5, 1977).
Sept. 9, 1977	Gulf Oil Corp., Washington, D.C. (If granted: The FEA's Aug. 9, 1977, information request denial would be rescinded and Gulf would receive access to the information requested in its May 20, 1977, submission.)	FEA 1463	Appeal of the FEA's information request denial.

## CASES FILED WITH THE OFFICE OF EXCEPTIONS AND APPEALS

Week of September 9 through September 16, 1977

Notice is hereby given that during the week of September 9 through September 16, 1977, the appeals and applications for exception or other relief listed in the Appendix to this Notice were filed with the Federal Energy Administration's Office of Exceptions and Appeals.

Under the FEA's procedural regulations, 10 CFR, Part 205, any person who

will be aggrieved by the FEA action sought in such cases may file with the FEA written comments on the application within ten days of service of notice, as prescribed in the procedural regulations. For purposes of those regulations, the date of service of notice shall be deemed to be the date of publication of this Notice or the date of receipt by an aggrieved person of actual notice, whichever occurs first.

ERIC J. FYGI,  
Acting General Counsel.

SEPTEMBER 24, 1977.

## NOTICES

## APPENDIX—List of cases received by the Office of Exceptions and Appeals—Week of Sept. 9 through 16, 1977

Date	Name and location of applicant	Case No.	Type of submission
Sept. 9, 1977	Keweenaw Oil Co., Tulsa, Okla. (If granted: Keweenaw Oil Co. would be permitted to sell the crude oil produced from the North Welch unit at upper tier ceiling prices.)	FEE-4797	Price exception (see 212.73).
Do	W. N. McMurry, Casper, Wyo. (If granted: W. N. McMurry would receive an extension of the exception relief granted in the FEA's June 17, 1977, decision and order and would be permitted to sell crude oil produced from the Hrabec and Warner Fredricks wells in Park County, Wyo., at upper tier ceiling prices for the benefit of the working interest owners.)	FEE 4600	Extension of the relief granted in <i>W. N. McMurry</i> , 6 FEA par. 83,014 (June 17, 1977).
Sept. 12, 1977	Continental Oil Co., Houston, Tex. (If granted: The FEA's Jan. 7, 1975, decision and order would be modified to adjust Continental Oil Co.'s requirements under the crude oil buy/sell program.)	FEX 0185	Supplemental order in <i>Continental Oil Co.</i> , 2 FEA par. 80,549 (Jan. 7, 1975).
Do	Exxon Co., U.S.A., Washington, D.C. (If granted: The FEA's Apr. 25, 1977, decision and order would be modified to adjust Exxon Co.'s requirements under the crude oil buy/sell program.)	FEX 0184	Supplemental order in <i>Exxon Co., U.S.A.</i> , 5 FEA par. 80,613 (Apr. 25, 1977).
Do	Home Gas Service, Inc., Swanton, Ohio. (If granted: The remedial order issued by FEA region V on Aug. 22, 1977, would be rescinded and Home Gas Service, Inc. would not be required to refund overcharges made in its sales of propane.)	FRA-1466 FRS-1466	Appeal of the remedial order issued by FEA region V on Aug. 22, 1977; stay request.
Do	Rock Island Refining Corp., Indianapolis, Ind. (If granted: The FEA's Aug. 12, 1977, decision and order would be rescinded and Rock Island Refining Corp. would not be required to purchase additional entitlements during the period August 1977 through August 1978.)	FRA 1465	Appeal of the decision and order in <i>Rock Island Refining Corp.</i> , 6 FEA par. — (Aug. 12, 1977).
Do	Southland Oil Co., VGS Corp., Washington, D.C. (If granted: The FEA's Apr. 8, 1977, decision and order would be modified and the FEA would review the appropriateness of the inclusion of the months of October and November 1975 in calculating the level of entitlements exception relief which Southland received in 1975.)	FEX 0188	Supplemental order in <i>Southland Oil Co.</i> , 5 FEA par. 80,596 (Apr. 8, 1977).
Do	Pam Terada, Palo Alto, Calif. (If granted: The remedial order issued by FEA region IX on July 19, 1977, would be rescinded and Terada would not be required to refund overcharges made in his sales of motor gasoline.)	FRA 1464	Appeal of the remedial order issued by FEA region IX on July 19, 1977.
Sept. 13, 1977	Big Sky Propane, Inc., Billings, Mont. (If granted: The FEA region VIII's July 18, 1977, decision and order would be rescinded and Big Sky Propane, Inc. would be permitted to increase its prices for propane above the maximum levels allowed under the mandatory petroleum price regulations.)	FEA 1467	Appeal of FEA region VIII's decision and order issued July 18, 1977.
Do	Cities Service Oil Co., Braintree, Mass. (If granted: Cities Service Oil Co. would receive a stay of the supplier/wholesale purchaser-reseller relationship requirements under the FEA region I's July 8, 1977, Aug. 8, 1977, Aug. 12, 1977, and Aug. 19, 1977, remedial orders.)	FRS-0107— FRS-1443— FRS-1444 FRS-1449	Stay of the remedial order issued by FEA region I on July 8, 1977, Aug. 8, 1977, Aug. 12, 1977, and Aug. 19, 1977.
Do	Daytona Beach Aviation, Daytona Beach, Fla. (If granted: Daytona Beach Aviation would be permitted to increase its prices for 100 L. Avraas and Jet 1-A fuel above the maximum levels allowed under the mandatory petroleum price regulations.)	FEE 1800	Price exception (see 212.73).
Do	Delta Drilling Co., Dallas, Tex. (If granted: Delta Drilling Co. would receive an extension of the exception relief granted in the FEA's June 8, 1977, decision and order and would be permitted to increase its prices to reflect nonproduct cost increases in excess of \$0.05 per gallon for natural gas liquid products produced at its Etexas plant.)	FEX 4804	Extension of the relief granted in <i>Delta Drilling Co.</i> , case No. FEE-4000 (decided June 8, 1977) (unreported decision).
Do	International Oil and Gas, Inc., Plymouth Meeting, Pa. (If granted: International Oil and Gas, Inc. would receive a stay of the requirement that it make refunds in connection with its sales of crude oil pursuant to the remedial order issued by FEA region III on Aug. 31, 1977, pending a determination on the appeal which it intends to file.)	FRS 1465	Stay of the remedial order issued by FEA region III on Aug. 31, 1977.

FEDERAL REGISTER, VOL. 42, NO. 190—FRIDAY, SEPTEMBER 30, 1977

V 4 2 1 9 0 S E P 3 0 7 7

Date	Name and location of applicant	Case No.	Type of submission
Do.....	Marshall R. Young Oil Co., Midland, Tex. (If granted: Marshall R. Young Oil Co. would be permitted to sell the crude oil produced from the Sawyer "A" well No. 1 located in Terry County, Tex. at prices in excess of the lower tier ceiling prices.)	FEE 4803	Price exception (sec. 212.73).
Do.....	McGoldrick Oil Co., Shreveport, La. (If granted: McGoldrick Oil Co. would be permitted to sell the crude oil produced from the Chaparral oil fields, and the Emboss Fisher State, Quinn and Moore West U. I. lease at prices in excess of the lower tier ceiling prices.)	FEE 4798	Do.

## PRIVACY ACT OF 1974

## Proposed New and Amended Systems of Records

AGENCY: Federal Energy Administration.

ACTION: Notice of Proposed New and Amended Systems of Records.

SUMMARY: Notice is hereby given that the Federal Energy Administration (FEA) is proposing to add to its existing systems of records two additional systems to be designated as "FEA-22, Correspondence Files" and "FEA-23, Telephone Numbers of FEA Officials." In accordance with 5 U.S.C. 552a(o), Office of Management and Budget (OMB) Circular No. A-108 and the transmittal memoranda thereto, a report on these systems of records has been filed, concurrent with this publication, with the Director of the Office of Management and Budget, the Speaker of the House of Representatives, the President of the Senate, and the Privacy Protection Study Commission.

Notice is also being given of the proposal by FEA to amend the routine uses of four of its existing systems of records: FEA-8, Statements of Financial Interest; FEA-14, Employee Carpool Parking; FEA-15, Mailing Lists for Requestors of Energy Related Information; and FEA-19, Congressional Constituent In-

quiries. A Report on New Systems is not being submitted under 5 U.S.C. 552a(o) with respect to these proposed amendments since they do not alter the purposes for which the systems are maintained.

Written comments will be received with respect to these proposals; however, it is the intent of FEA to operate the proposed systems of records and the existing systems as amended at the expiration of the advance notice period if no comments to the contrary are received.

DATES: Comments by October 31, 1977. 4:30 p.m.

ADDRESS: Written comments to: Executive Communications, Room 3317, Federal Energy Administration, Box PH, Washington, D.C. 20461.

FOR FURTHER INFORMATION CONTACT:

John Treanor, Privacy Act Officer, Room 2121, 12th and Pennsylvania Ave. NW., Washington, D.C. 20461, (202-566-9840). Susan Weinstein, Office of General Counsel, room 6144, 12th and Pennsylvania Ave., NW., Washington, D.C. 20461, (202-566-9296).

## SUPPLEMENTARY INFORMATION:

I. Narrative Statement, as required by the Privacy Act of 1974 and OMB Circular No. A-108:

A. Purposes.  
B. Authority.  
C. Potential Consequences on Individual Privacy.

D. Safeguards Against Unauthorized Access.

II. Amendments to Routine Uses:  
A. FEA-8, Statements of Financial Interests.

B. FEA-14, Employee Carpool Parking.

C. FEA-15, Mailing Lists for Requestors of Energy Related Information.

D. FEA-19, Congressional Constituent Inquiries.

III. Comment Procedures.

I. Narrative Statement, as Required by the Privacy Act of 1974 and OMB Circular No. A-108.

A. Purposes. FEA-22, Correspondence Files, is a system designed to facilitate the administrative control of FEA correspondence. Appropriate indexing permits the retrieval of pertinent information by correspondent name, date of correspondence, or assigned control number. The system is utilized to assure an efficient processing of FEA correspondence through the agency and as a reference in case of further inquiries by the original correspondent or an inquiry on a similar matter by another party.

The information contained in FEA-23, Telephone Numbers of FEA Officials, is used as a reference for the home telephone numbers of senior FEA staff members. The establishment of this system is a necessary precaution to guard against an emergency situation during which the appropriate FEA official could not be contacted.

B. Authority. The authority for the maintenance of FEA-22 and FEA-23 are as listed in the proposed system notices. Both systems are established under the authority vested in the EPA administrator contained in section 7(c) of the Federal Energy Administration Act of 1974 (Pub. L. 93-275) to promulgate such rules, regulations, and procedures as may be necessary to carry out his functions, as well as his authority under 5 U.S.C. 301 to prescribe regulations for the performance of FEA business and for the custody, use, and preservation of its records, papers, and property. In addition, FEA-22 is maintained under the authority of the Administrator under 44 U.S.C. 3101 to make and preserve records.

C. Potential Consequences on Individual Privacy. FEA does not deem that the maintenance of either FEA-22 or FEA-23 will have any substantial effect on the privacy and other personal or property rights of individuals. No information is retained in either system other than that which is given voluntarily to the agency by the individual. The use of FEA-22 is totally internal to FEA operations, with no access to the information contained therein allowed to any persons other than those with a need to know for the purpose of conducting official FEA business. Access to FEA-23 is likewise limited to those requiring the information contained therein for official purposes. With FEA's

V 4 2 1 9 0 S E P 3 0 7 7 U M I

stringent access controls and limited use of the records contained in FEA-22 and FEA-23, the operation of these systems will have minimal effect on an individual's privacy and other personal or property rights.

Because both FEA-22 and FEA-23 are systems designed to facilitate the internal administrative operations of the agency, their operation will have no effect on the preservation of the constitutional principle of federalism and separation of power.

**D. Safeguards Against Unauthorized Access.** The risk of unauthorized access has been minimized by locating both FEA-22 and FEA-23 in lockable containers within rooms secured when authorized users or the system managers are not present. Control over these facilities is given only to the system managers and those qualifying for access under the routine uses listed in the proposed system notices. The lower risk alternative of maintaining both systems in locked cabinets within secured rooms was considered; however, the presence of responsible FEA personnel was considered to be sufficient to prevent unauthorized access to the systems. No higher risk alternatives were considered.

## II. Amendments to Routine Uses.

**A. FEA-8, Statements of Financial Interest.** The amendments to its system notices submitted by FEA concurrently with this notice enlarge the system of records designated as FEA-8 to include information collected on the form entitled "Statement of Known Financial Interests." This form was designed by FEA to satisfy the financial reporting requirement contained in section 522 of the Energy Policy and Conservation Act (Pub. L. 94-163). As such, the information contained therein is required by section 522 to be made available to the public. Accordingly, FEA proposes to amend the routine use of FEA-8 to permit public access to the information collected from employees through their filing of a "Statement of Known Financial Interest." The routine uses for other records contained in FEA-8 will not be affected by this amendment.

**B. FEA-14 Employee Carpool Parking.** FEA proposes to amend the routine uses for records contained in FEA-14 to delete the transmittal of social security numbers to the General Services Administration. Social security numbers are no longer collected by the agency for retention in FEA-14.

**C. FEA-15, Mailing Lists for Requestors of Energy Related Information.** FEA proposes to amend the routine uses for FEA-15 to delete the transmittal of information to the U.S. Treasury and the American Mailing Co., since FEA no longer contracts for printing with either of these organizations. Instead, FEA proposes to include as a routine user any contractor handling bulk or single copy mailings for FEA. The system manager will retain a current list of all contractors which will be made available to the public upon request.

**D. FEA-19, Congressional Constituent Inquiries.** FEA proposes to add to the current routine uses for information contained in FEA-19 the use of the system as a substantive reference for previous FEA responses to Congressional inquiries on behalf of constituents. Such use is necessary to permit FEA to research past responses in the event of an additional request with reference to a subject individual or a request by a member of Congress on a similar subject with reference to a new party.

## III. Comment Procedures

As provided by section 3(e)(11) of the Privacy Act of 1974 (5 U.S.C. 552a(e)(11)), interested persons are invited to submit written data, views, or arguments related to these proposals to Executive Communications, Federal Energy Administration, Box PH, Washington, D.C. 20461. Hand carried comments may be delivered to Room 3309, Federal Building, 12th and Pennsylvania Avenue, NW., Washington, D.C., between the hours of 8:00 a.m. to 4:30 p.m., Monday through Friday, except on legal public holidays.

Comments should be identified on the outside of the envelope and on the documents submitted to FEA Executive Communications with the designation "Privacy Act System of Records" and include the appropriate system number(s). Fifteen copies should be submitted. All comments received on or before October 31, 1977, will be available for public inspection in the FEA Reading Room, Room 2107, Federal Building, 12th and Pennsylvania Avenue, N.W., Washington, D.C., between the hours of 8:00 a.m. and 4:30 p.m., Monday through Friday, except on legal public holidays. These comments and all other relevant information, will be considered by FEA before the new or amended systems are adopted in their final form.

Any information or data considered by the person furnishing it to be confidential must be so identified and submitted in writing, one copy only. The FEA reserves the right to determine the confidential status of the information or data and to treat it according to that determination.

It is the intent of the Federal Energy Administration to operate the systems of records as proposed at the expiration of the advance notice period if no comments to the contrary are received. The FEA has determined that this document does not contain a major proposal requiring preparation of an Inflation Impact Statement under Executive Order 11821 and OMB Circular A-107. (Privacy Act of 1974, Pub. L. 93-579; Federal Energy Administration Act of 1974, Pub. L. 93-275, as amended by Pub. L. 94-385; Executive Order 11790, 39 FR 23185.)

In consideration of the foregoing, the adoption or amendment, as appropriate, of each of the six systems of records set forth below is proposed.

Issued in Washington, D.C., September 16, 1977.

ERIC J. FYGI,  
Acting General Counsel,  
Federal Energy Administration.

### FEA-8

(Complete text, as amended, is published concurrently with this notice in the FEA annual compilation of its system notices.)  
**System name:** Statements of Financial Interest.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses: The "Statement of Known Financial Interest" is available to the public upon request. Other routine uses for the records in the system are as listed in Appendix B.

### FEA-14

(Complete text, as amended, is published concurrently with this notice in the FEA annual compilation of its system notices.)  
**System name:** Employee Carpool Parking.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses: The routine uses are those listed in Appendix B.

### FEA-15

(Complete text, as amended, is published concurrently with this notice in the FEA annual compilation of its system notices.)  
**System name:** Mailing Lists for Requestors of Energy Related Information.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses: The records are released to contractors handling bulk and single copy mailings for FEA. Names and addresses of such contractors may be requested from the system manager. Other routine uses are as listed in Appendix B.

### FEA-19

(Complete text, as amended, is published concurrently with this notice in the FEA annual compilation of its system notices.)  
**System name:** Congressional Constituent Inquiries.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses: The records are used to record Congressional inquiries on behalf of constituents, to ensure proper document control of the response; and to reference FEA responses to such inquiries. Other routine uses include those listed in Appendix B.

### FEA-22

**System name:**  
Correspondence Files.

**Security classification:**  
Unclassified.

**System location:**

For the National Office the location is: Executive Communications, Office of the Administrator, Federal Energy Administration, 12th and Pennsylvania Avenue, NW., Washington, D.C. 20461.

Records for the National Office may also be located in the organizational unit within FEA which originates the response to the correspondence or has jurisdiction over its subject matter.

For records at FEA's Regional Offices: The Regional Administrator of the appropriate Regional Office.

**Categories of individuals covered by the system:**

Individuals communicating by letter with FEA.

**Categories of records in the system:**

Name, address of correspondent, and copies of the agency response.

**Authority for maintenance of the system:**  
5 U.S.C. 301; 44 U.S.C. 3101; Federal Energy Administration Act of 1974, Executive Order 11790.

**Routine uses of records maintained in the system, including categories of users and the purposes of such uses:**

The records are used by FEA personnel to record written communications with FEA from correspondents outside of FEA, to ensure proper document control of the FEA response, as a reference for such response, and for the routine uses listed in Appendix B.

**Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:**

**Storage:**

Paper records.

**Retrievability:**

Name of correspondent.

**Safeguards:**

Records are located in lockable metal file cabinets in secured rooms or secured premises with access limited to those whose official duties require access.

**Retention and disposal:**

Records are retained in accordance with the office's record control schedule.

**System manager(s) and address:**

For the records at the National Office:

Special Assistant, Executive Communications, Office of the Administrator, Federal Energy Administration, 12th and Pennsylvania Avenue, NW., Washington, D.C. 20461.

The Administrative Officers of the appropriate National Office organizational sub-units are also system managers.

For records at FEA's Regional Offices: The Regional Administrator of the appropriate Regional Office.

### Notification procedure:

Requests by an individual to determine if a system of records contains information about him should be directed to the Privacy Act Officer, Federal Energy Administration, Washington, D.C. 20461, or to the Privacy Act Officer at the appropriate Regional Office, at the address listed in Appendix A, in accordance with FEA's Privacy Act Regulations (10 C.F.R. 206.3, 40 F.R. 45610 (October 2, 1975)).

### Record access procedures:

Requests by an individual for access to a system of records that contains information about him should be directed to the Privacy Act Officer, Federal Energy Administration, Washington, D.C. 20461, or to the Privacy Act Officer at the appropriate Regional Office, at the address listed in Appendix A, in accordance with FEA's Privacy Act Regulations (10 C.F.R. 206.3, 40 F.R. 45610 (October 2, 1975)).

### Contesting record procedures:

Requests by an individual to correct or amend the content of a record containing information about him should be directed to the Privacy Act Officer, Federal Energy Administration, Washington, D.C. 20461, or to the Privacy Act Officer at the appropriate Regional Office, at the address listed in Appendix A, in accordance with FEA's Privacy Act Regulations (10 C.F.R. 206.7, 40 F.R. 45613 (October 2, 1975)).

### Record source categories:

Subject individuals and drafter of FEA response.

**Systems exempted from certain provisions of the Act:**

None.

### FEA-23

**System name:**

Telephone Numbers of FEA Officials.

**Security classification:**

Unclassified.

**System location:**

Office of the Administrator, Federal Energy Administration, 12th and Pennsylvania Avenue, NW., Washington, D.C. 20461.

**Categories of individuals covered by the system:**

FEA senior staff officials.

**Categories of records in the system:**

Name and home telephone number.

**Authority for maintenance of the system:**

5 U.S.C. 301; Federal Energy Administration Act of 1974; Executive Order 11790.

**Routine uses of records maintained in the system, including categories of users and the purposes of such uses:**

The records are available only to FEA staff within the Office of the Administrator and the energy policy staff within the Executive Office of the President. Telephone numbers will be given out on an individual basis from the list to those FEA officials with a demonstrated need

for the information in the course of their official duties.

**Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:**

**Storage:**

Paper records.

**Retrievability:**

Name of FEA official.

**Safeguards:**

Records are located in lockable drawers in secured rooms with access limited to those whose official duties require access.

**Retention and disposal:**

Records are revised when appropriate, at which point the older records are destroyed.

**System manager(s) and address:**

Staff Assistant, Office of the Administrator, Federal Energy Administration, 12th and Pennsylvania Avenue, NW., Washington, D.C. 20461.

### Notification procedure:

Requests by an individual to determine if a system of records contains information about him should be directed to the Privacy Act Officer, Federal Energy Administration, Washington, D.C. 20461, in accordance with FEA's Privacy Act Regulations (10 C.F.R. 206.3, 40 F.R. 45610 (October 2, 1975)).

### Record access procedures:

Requests by an individual for access to a system of records that contains information about him should be directed to the Privacy Act Officer, Federal Energy Administration, Washington, D.C. 20461, in accordance with FEA's Privacy Act Regulations (10 C.F.R. 206.3, 40 F.R. 45610 (October 2, 1975)).

### Contesting record procedures:

Requests by an individual to correct or amend the content of a record containing information about him should be directed to the Privacy Act Officer, Federal Energy Administration, Washington, D.C. 20461, in accordance with FEA's Privacy Act Regulations (10 C.F.R. 206.7, 40 F.R. 45613 (October 2, 1975)).

### Record source categories:

The subject individuals.

**System exempted from certain provisions of the Act:**

None.

percent of the voting shares of Century National Bank & Trust Co., New York, N.Y. The factors that are considered in acting on the application are set forth in § 3(c) of the Act (12 U.S.C. § 1842(c)).

The application may be inspected at the offices of the Board of Governors or at the Federal Reserve Bank of New York. Any person wishing to comment on the application should submit views in writing to the Secretary, Board of Governors of the Federal Reserve System, Washington, D.C. 20551, to be received no later than October 21, 1977.

Board of Governors of the Federal Reserve System, September 23, 1977.

GRIFFITH L. GARWOOD,  
Deputy Secretary of the Board.

[FR Doc 77-28773 Filed 9-29-77; 8:45 am]

#### FIRST AMTENN CORP.

#### Proposed Acquisition of Lee, Robinson & Stein, Inc.

First Amtegn Corp., Nashville, Tenn., has applied, pursuant to § 4(c) (8) of the Bank Holding Company Act (12 U.S.C. § 1843(c) (8)) and § 225.4(b) (2) of the Board's Regulation Y (12 CFR § 225.4(b) (2)), for permission to acquire voting shares of Lee, Robinson & Stein, Inc., Nashville, Tenn. Notice of the application was published on August 10, 1977, in the Nashville Banner and the Tennessean, Nashville, Tenn., and the Chattanooga News-Free Press, Chattanooga, Tenn.; on August 11, 1977, in the Memphis Press-Scimitar, Memphis, Tenn., and the Knoxville News-Sentinel, Knoxville, Tenn., all newspapers circulated in those respective cities; and on August 16, 1977, in the Wall Street Journal, New York, N.Y.

Applicant states that the proposed subsidiary would engage in the activities of acting as investment or financial advisor to the extent of providing portfolio investment advice to any person or entity. Such activities have been specified by the Board in § 225.4(a) of Regulation Y as permissible for bank holding companies, subject to Board approval of individual proposals in accordance with the procedures of § 225.4(b).

Interested persons may express their views on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Any request for a hearing on this question should be accompanied by a statement summarizing the evidence the person requesting the hearing proposes to submit or to elicit at the hearing and a statement of the reasons why this matter should not be resolved without a hearing.

The application may be inspected at the offices of the Board of Governors or at the Federal Reserve Bank of Atlanta.

Any views or requests for hearing should be submitted in writing and received by the Secretary, Board of Governors of the Federal Reserve System, Washington, D.C. 20551, not later than October 24, 1977.

Board of Governors of the Federal Reserve System, September 26, 1977.

GRIFFITH L. GARWOOD,  
Deputy Secretary of the Board.

#### [ 6210-01 ]

#### FIRST NATIONAL CINCINNATI CORP.

#### Acquisition of Bank

First National Cincinnati Corp., Cincinnati, Ohio, has applied for the Board's approval under § 3(a) (3) of the Bank Holding Company Act (12 U.S.C. § 1842(a) (3)) to acquire 100 percent of the voting shares (less directors' qualifying shares) of the successor by merger to the Third National Bank of Circleville, Circleville, Ohio. The factors that are considered in acting on the application are set forth in § 3(c) of the Act (12 U.S.C. § 1842(c)).

The application may be inspected at the offices of the Board of Governors or at the Federal Reserve Bank of Cleveland. Any person wishing to comment on the application should submit views in writing to the Secretary, Board of Governors of the Federal Reserve System, Washington, D.C. 20551, to be received not later than October 21, 1977.

Board of Governors of the Federal Reserve System, September 23, 1977.

GRIFFITH L. GARWOOD,  
Deputy Secretary of the Board.

[FR Doc 77-28775 Filed 9-29-77; 8:45 am]

#### [ 6210-01 ]

#### THE HINSDALE CAPITAL CORP.

#### Order Approving Formation of Bank Holding Company

The Hinsdale Capital Corp., Chicago, Ill., has applied for the Board's approval under § 3(a) (1) of the Bank Holding Company Act (12 U.S.C. § 1842(a) (1)) of formation of a bank holding company through acquisition of 80 percent or more of the voting shares of the First National Bank of Hinsdale, Hinsdale, Ill. ("Bank").

Notice of the application, affording opportunity for interested persons to submit comments and views, has been given in accordance with § 3(b) of the Act. The time for filing comments and views has expired, and the application and all comments received have been considered in light of the factors set forth in § 3(c) of the Act (12 U.S.C. § 1842(c)).

Applicant is a nonoperating corporation organized for the purpose of becoming a bank holding company through the acquisition of Bank (deposits of \$71.9

million).<sup>1</sup> Upon acquisition of Bank, Applicant would control the 124th largest bank in Illinois, with approximately 0.11 percent of total deposits in commercial banks in the State.

Bank is the larger of two banks located in Hinsdale, and, within the Chicago banking market,<sup>2</sup> is the 85th largest commercial bank, with approximately 0.16 percent of the total market deposits. Principals of Applicant are associated with and exert considerable management influence over three other Illinois banks, located in Winnetka, Glencoe, and Wilmette. These three banks compete with banks in the Chicago banking market and collectively control market deposits of \$106.9 million, representing 0.24 percent of total market deposits. With the addition of Bank, the group would control total market deposits of \$178.8 million, or 0.40 percent. In view of the insubstantial increase in total deposits and the total market share of the group, it does not appear that consummation of the proposed transaction would significantly affect competition, increase the concentration of banking resources, or have any undue adverse effect on any other bank. Accordingly, competitive considerations are consistent with approval of the application.

The conditions of the other banks with which Applicant's principals are associated are generally satisfactory and suggest that such persons will conduct the operations of Applicant and Bank in a satisfactory manner. Although Applicant will incur debt in connection with the proposal, the projected income from Bank should provide sufficient revenue to service the debt without adversely affecting the financial condition of Bank. Moreover, Applicant has committed to increase the capital accounts of Bank by \$1.2 million within one year of consummation of the transaction. Therefore, considerations relating to the financial and managerial resources and future prospects of Applicant and Bank are regarded as generally satisfactory and consistent with approval.

Although it appears that Bank has been responsive to the convenience and needs of the Hinsdale community, Applicant does plan to provide additional services and to revise existing services upon approval of this proposal. Such services include lowering the minimum balance requirement on demand deposit accounts, constructing a new drive-in facility, extending the maximum term on installment loans, and increasing Bank's mortgage loan portfolio. Considerations relating to the convenience and needs of the community to be served are consistent with approval of the application. Accordingly, it has been determined that the proposed acquisition

<sup>1</sup> All banking data are as of December 31, 1976.

<sup>2</sup> The Chicago banking market, approximated by all of Cook and Du Page Counties and the southern half of Lake County, Ill., is the relevant market for purposes of this application.

would be in the public interest and that the application should be approved.

On the basis of the record, the application is approved for the reasons summarized above. The transaction shall not be made before the thirtieth calendar day following the effective date of this Order, or later than three months after the effective date of this Order, unless such period is extended by the Board, or by the Federal Reserve Bank of Chicago pursuant to delegated authority.

By order of the Board of Governors, effective September 23, 1977.

GRIFFITH L. GARWOOD,  
Deputy Secretary of the Board.

#### SCHRODERS LIMITED

#### Proposed Acquisition of Robert C. Gilkison, Inc.

Schrodgers Limited, Schroder International Limited, and Schroder International Holdings Limited, all of London, England, and Schrodgers Inc., New York, N.Y., have applied, pursuant to § 4(c) (8) of the Bank Holding Company Act (12 U.S.C. § 1843(c) (8)) and § 225.4(b) (2) of the Board's Regulation Y (12 CFR § 225.4(b) (2)), for permission to acquire the business and assets of Robert C. Gilkison, Inc., Washington, D.C. Notice of the application was published on August 1, 1977, in The Washington Post, a newspaper circulated in Washington, D.C., and on July 30, 1977, in The New York Times, a newspaper circulated in New York, N.Y.

Applicant states that the proposed acquisition would engage in the activities of acting as investment counselors and registered investment advisor under the Investment Advisors Act of 1940. Such activities have been specified by the Board in § 225.4(a) of Regulation Y as permissible for bank holding companies, subject to Board approval of individual proposals in accordance with the procedures of § 225.4(b).

Interested persons may express their views on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Any request for a hearing on this question should be accompanied by a statement summarizing the evidence the person requesting the hearing proposes to submit or to elicit at the hearing and a statement of the reasons why this matter should not be resolved without a hearing.

<sup>1</sup> Voting for this action: Governors Wallach, Goldwell, Jackson, Partee, and Lilly. Absent and not voting: Chairman Burns and Governor Gardner.

The application may be inspected at the offices of the Board of Governors or at the Federal Reserve Bank of New York.

Any views or requests for hearing should be submitted in writing and received by the Secretary, Board of Governors of the Federal Reserve System, Washington, D.C. 20551, not later than October 21, 1977.

Board of Governors of the Federal Reserve System, September 23, 1977.

GRIFFITH L. GARWOOD,  
Deputy Secretary of the Board.

#### SCHRODERS LIMITED

#### Proposed Retention of Schroder Naess & Thomas

Schrodgers Limited, Schroder International Limited, and Schroder International Holding Limited, all of London, England, and Schrodgers Inc., New York, N.Y., have applied, pursuant to § 4(c) (8) of the Bank Holding Company Act (12 U.S.C. § 1843(c) (8)) and § 225.4(b) (2) of the Board's Regulation Y (12 CFR § 225.4(b) (2)), for permission to retain the business and assets of the Schroder Naess & Thomas Division of Schrodgers Incorporated, New York, N.Y. Notice of the application was published in The Wall Street Journal, as well as newspapers of general circulation in Baltimore, Md., Washington, D.C., New York, N.Y., and Atlanta, Ga.

Applicant states that the division would continue to engage in the activities of acting as investment counselor and registered investment advisor under the Investment Advisors Act of 1940. Such activities have been specified by the Board in § 225.4(a) of Regulation Y as permissible for bank holding companies, subject to Board approval of individual proposals in accordance with the procedures of § 225.4(b).

Interested persons may express their views on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Any request for a hearing on this question should be accompanied by a statement summarizing the evidence the person requesting the hearing proposes to submit or to elicit at the hearing and a statement of the reasons why this matter should not be resolved without a hearing.

The application may be inspected at the offices of the Board of Governors or at the Federal Reserve Bank of New York.

Any views or requests for hearing should be submitted in writing and received by the Secretary, Board of Governors of the Federal Reserve System,

Washington, D.C. 20551, not later than October 21, 1977.

Board of Governors of the Federal Reserve System, September 23, 1977.

GRIFFITH L. GARWOOD,  
Deputy Secretary of the Board.

#### DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

#### Food and Drug Administration

Docket No. 76N-0185; DESI 3158

#### CERTAIN ANDROGEN PREPARATIONS

Drugs for Human Use; Drug Efficacy Study Implementation; Followup Notice and Opportunity for Hearing

AGENCY: Food and Drug Administration.

#### ACTION: Notice

SUMMARY: This notice sets forth the conditions for marketing the androgen preparations described below for the indications for which they continue to be regarded as effective and offers an opportunity for a hearing concerning those indications reclassified as lacking substantial evidence of effectiveness.

DATES: Hearing requests due on or before October 31, 1977. Bioavailability supplements to approved new drug applications due on or before March 28, 1977. Other supplements due on or before November 29, 1977.

ADDRESSES: Communications forwarded in response to this notice should be identified with the reference number DESI 3158, directed to the attention of the appropriate office named below, and addressed to the Food and Drug Administration, 5600 Fishers Lane, Rockville, Md. 20857.

Supplements (identify with NDA number): Division of Metabolic and Endocrine Drug Products (HFD-130), Rm. 14B-03, Bureau of Drugs.

Original abbreviated new drug applications and supplements thereto (identify as such): Division of Generic Drug Monographs (HFD-530), Bureau of Drugs.

Requests for Hearing (identify with Docket Number appearing in the heading of this notice): Hearing Clerk, Food and Drug Administration (HFC-20), Rm. 4-65.

Requests for the report of the National Academy of Sciences-National Research Council: Public Records and Document Center (HFC-18), Rm. 4-62.

Requests for opinion of the applicability of this notice to a specific product: Division of Drug Labeling Compliance (HFD-310), Bureau of Drugs.

Other communications regarding this notice: Drug Efficacy Study Implementation Project Manager (HFD-501), Bureau of Drugs.

John H. Hazard, Jr., Bureau of Drugs (HFD 32), Food and Drug Administration, Department of Health, Education, and Welfare, 5600 Fishers Lane, Rockville, Md. 20857 (301-443-3850).

**SUPPLEMENTARY INFORMATION.** In a notice (DESI 3158, Docket No. PDC 1-183 (now Docket No. 76N 01851)) published in the Federal Register of August 1, 1970 (35 FR 12356), the Food and Drug Administration announced its conclusions that the androgen preparations described below are effective, probably effective, possibly effective, and lacking substantial evidence of effectiveness for their various labeled indications. The drugs are used to treat certain hormone deficiencies. No data were submitted in support of any of the less-than-effective indications and those indications now are reclassified to lacking substantial evidence of effectiveness.

The notice that follows does not pertain to the indications stated in the August 1, 1970, notice to lack substantial evidence of effectiveness. No person requested a hearing concerning them, and they are no longer allowable in the labeling. Any such product labeled for those indications is subject to regulatory action.

1. NDA 3-158; Oretol Methyl Tablets containing 10 milligrams or 25 milligrams of methyltestosterone per tablet; Bohring Corp., Gillingham Hill Rd., Kenilworth, N.J. 07033.

2. NDA 3-234; Neo-Hombreol (M) Tablets containing 10 milligrams or 25 milligrams methyltestosterone per tablet; Organon, Inc., 375 Mount Pleasant Ave., West Orange, N.J. 07052.

3. NDA 3-240; Melandren Linguets and Tablets containing 5 milligrams or 10 milligrams methyltestosterone per linguet and 10 milligrams or 25 milligrams methyltestosterone per tablet; Ciba Pharmaceutical Co., Division Ciba-Geigy Corp., 556 Morris Ave., Summit, N.J. 07901.

4. NDA 7-029; Perandren Propionate Injection, containing 25 milligrams, 50 milligrams, or 100 milligrams testosterone propionate per milliliter in sesame oil; Ciba Pharmaceutical Co.

5. NDA 9-165; Delatestryl Injection containing 200 milligrams testosterone enanthate per milliliter in sesame oil, and in disposable syringes containing 200 milligrams testosterone enanthate per syringe in sesame oil, E. R. Squibb & Sons, Post Office Box 4000, Princeton, N.J. 08540.

6. NDA 9-349; Parendren Phenylacetate Intramuscular Repository, Aqueous Suspension containing 50 milligrams testosterone phenylacetate per milliliter and 1 percent procaine hydrochloride; Ciba Pharmaceutical Co.

7. NDA 10-611; Halotestin Tablets containing 2 milligrams, 5 milligrams, or 10 milligrams fluoxymesterone per tablet; The Upjohn Co., 7171 Portage Rd., Kalamazoo, Mich. 49002.

8. NDA 11-359; Ora-Testril Tablets containing 2 milligrams or 5 milligrams fluoxymesterone per tablet; E. R. Squibb and Sons.

9. NDA 11-424; Ultandren Tablets containing 2 milligrams or 5 milligrams fluoxymesterone per tablet; Ciba Pharmaceutical Co.

Such drugs are regarded as new drugs (21 U.S.C. 321(p)). Supplemental new drug applications are required to revise the labeling in and to update previously approved applications providing for such drugs. An approved new drug application is a requirement for marketing such drug products.

In addition to the holder(s) of the new drug application(s) specifically named above, this notice applies to all persons who manufacture or distribute a drug product, not the subject of an approved new drug application, that is identical, related, or similar to a drug product named above, as defined in 21 CFR 310.4. It is the responsibility of every drug manufacturer or distributor to review this notice to determine whether it covers any drug product he manufactures or distributes. Any person may request an opinion of the applicability of this notice to a specific drug product he manufactures or distributes that may be identical, related, or similar to a drug product named in this notice by writing to the Division of Drug Labeling Compliance (address given above).

**A. Effectiveness classification.** The Food and Drug Administration has reviewed all available evidence and concludes that the drugs are effective for the indications in the labeling conditions below. The drugs now lack substantial evidence of effectiveness for the indications evaluated as probably and possibly effective in the August 1, 1970 notice.

**B. Conditions for approval and marketing.** The Food and Drug Administration (FDA) is prepared to approve new drug applications under conditions described herein. The type of new drug applications required for the various products is set forth under *Marketing Status* below.

1. *Form of drug.* a. Testosterone enanthate is in solution form suitable for intramuscular administration.

b. Methyltestosterone is in tablet form suitable for oral or buccal administration.

c. Testosterone propionate is in solution form suitable for intramuscular administration.

d. Testosterone phenylacetate is in suspension form suitable for intramuscular repository administration.

e. Fluoxymesterone is in tablet form suitable for oral administration.

2. *Labeling conditions.* a. The label bears the statement, "Caution: Federal law prohibits dispensing without prescription."

b. The drug is labeled to comply with all requirements of the act and regulations, and the labeling bears adequate information for safe and effective use of the drug. The indications are as follows:

*Testosterone enanthate solution for intramuscular administration: In the male:*

1. Eunuchoidism and eunuchism.
2. Climacteric symptoms when these are secondary to androgen deficiency.
3. Oligospermia.
4. Deficiency after castration.

*Methyltestosterone for oral or buccal administration: In the male:*

1. Eunuchoidism and eunuchism.
2. Climacteric symptoms when these are secondary to androgen deficiency.
3. Impotence due to androgen deficiency.
4. Postpuberal cryptorchidism with evidence of hypogonadism.

*In the female:*

1. Prevention of postpartum breast pain and engorgement. There is no satisfactory evidence that this drug prevents or suppresses lactation.

2. Palliation of androgen-responsive, advancing, inoperable mammary cancer, in women who are more than 1 year, but less than 5 years postmenopausal or who have been proven to have a hormone-dependent tumor as shown by previous beneficial response to castration.

*Testosterone propionate solution for intramuscular administration: In the male:*

1. Postpuberal cryptorchidism with evidence of hypogonadism.
2. Eunuchism and eunuchoidism.
3. Impotence due to androgen deficiency.
4. Climacteric symptoms when these are secondary to androgen deficiency.

*In the female:*

1. Prevention of postpartum breast pain and engorgement. There is no satisfactory evidence that this drug prevents or suppresses lactation.

2. Palliation of androgen-responsive, advancing, inoperable mammary cancer in women who are more than 1 year, but less than 5 years postmenopausal or who have been proven to have a hormone-dependent tumor as shown by previous beneficial response to castration.

*Testosterone phenylacetate suspension for intramuscular repository administration: In the male:*

1. Eunuchoidism and eunuchism.
2. Climacteric symptoms when these are secondary to androgen deficiency.

*In the female:*

1. Palliation of androgen-responsive, advancing, inoperable mammary cancer in women who are more than 1 year, but less than 5 years postmenopausal or who have been proven to have a hormone-dependent tumor as shown by previous beneficial response to castration.

*Fluoxymesterone for oral administration: In the male:*

The primary indication in the male is replacement therapy in conditions associated with a deficiency or absence of endogenous testicular hormone. Androgen therapy prevents the development of atrophic changes in the necessary male sex organs following castration; as long as replacement therapy is continued, these organs can be maintained in a relatively normal state.

*In the female:*

1. Eunuchoidism and eunuchism.

2. Climacteric symptoms when these are secondary to androgen deficiency.

3. Impotence due to androgen deficiency.

4. Delayed puberty, provided it has been definitely established as such, and it is not just a familial trait.

1. Eunuchoidism and eunuchism.
2. Climacteric symptoms when these are secondary to androgen deficiency.

3. Those symptoms of panhypopituitarism related to hypogonadism. Appropriate adrenal cortical and thyroid hormone replacement therapy are still necessary, however, and are actually of primary importance.

4. Impotence due to androgen deficiency.
5. Delayed puberty, provided it has been definitely established as such, and it is not just a familial trait.

*In the female:*

1. Prevention of postpartum breast pain and engorgement. There is no satisfactory evidence that this drug prevents or suppresses lactation.

2. Palliation of androgen-responsive, advancing, inoperable mammary cancer, in women who are more than 1 year, but less than 5 years postmenopausal or who have been proven to have a hormone-dependent tumor as shown by previous beneficial response to castration.

3. *Marketing status.* a. *Marketing of such drug products that are now the subject of an approved or effective new drug application may be continued provided that, on or before November 29, 1977, the holder of the application submits, if he has not previously done so,*

- (i) a supplement for revised labeling as needed to be in accord with the labeling conditions described in this notice, and complete container labeling if current container labeling has not been submitted, and (ii) for all products except delayed or prolonged release dosage forms, a supplement to provide updating information with respect to items 6 (components), 7 (composition), and 8 (methods, facilities, and controls) of new drug application form FD-356H (21 CFR 314.1(c)) to the extent required in abbreviated applications (21 CFR 314.1(f)), and for delayed or prolonged release dosage forms, a supplement to provide full updating information with respect to items 6, 7, and 8 of the new drug application form FD-356H.

In addition, on or before March 28, 1977, the holders of such applications for the following drugs are required to supplement their application to provide (1) for methyltestosterone tablets, evidence from in vivo studies that demonstrates the bioavailability of the tablet relative to the bioavailability of a solution containing the same amount of drug as in the tablet, and also in vitro dissolution rate data, and (2) for methyltestosterone buccal (or sublingual) tablets and fluoxymesterone tablets, only in vitro dissolution rate data. The dissolution profile shall be determined for 12 individual tablets using FDA Paddle Method at 50 revolutions per minute, 37°C and 500 milliliters of medium. Both water and 0.1N HCl are to be used as media. Twelve tablets are to be tested in each medium.

b. Approval of an abbreviated new drug application (ANDA) (21 CFR 314.1(f)) must be obtained prior to marketing such product. For preparations in delayed or prolonged release dosage forms, the application shall contain full information with respect to items 6 (components), 7 (composition), and 8 (methods, facilities, and controls) of new drug application form FD-356H.

In addition, for the following drugs the abbreviated new drug applications are to provide (1) for methyltestosterone tablets, evidence from in vivo studies that demonstrates the bioavailability of the tablet relative to the bioavailability of a solution containing the same amount of drug as in the tablet, and also in vitro dissolution rate data, and (2) for methyltestosterone buccal (or sublingual) tablets and fluoxymesterone tablets, only in vitro dissolution rate data. The dissolution profile shall be determined for 12 individual tablets using FDA Paddle Method at 50 revolutions per minute, 37°C and 500 milliliters of medium. Both water and 0.1N HCl are to be used as media. Twelve tablets are to be tested in each medium.

b. Approval of an abbreviated new drug application (ANDA) (21 CFR 314.1(f)) must be obtained prior to marketing such product. For preparations in delayed or prolonged release dosage

forms, the application shall contain full information with respect to items 6 (components), 7 (composition), and 8 (methods, facilities, and controls) of new drug application form FD-356H.

In addition, for the following drugs the abbreviated new drug applications are to provide (1) for methyltestosterone tablets, evidence from in vivo studies that demonstrates the bioavailability of the tablet relative to the bioavailability of a solution containing the same amount of drug as in the tablet, and also in vitro dissolution rate data; and (2) for methyltestosterone buccal (or sublingual) tablets and fluoxymesterone tablets, in vitro dissolution rate data. The dissolution profile shall be determined for 12 individual tablets using FDA Paddle Method at 50 revolutions per minute, 37°C and 500 milliliters of medium. Both water and 0.1N HCl are to be used as media. Twelve tablets are to be tested in each medium.

Marketing prior to approval of a new drug application will subject such products, and those persons who caused the product to be marketed, to regulatory action.

**C. Notice of opportunity for hearing.** On the basis of all the data and information available to him, the Director of the Bureau of Drugs is unaware of any adequate and well-controlled clinical investigation, conducted by experts qualified by scientific training and experience, meeting the requirements of section 505 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355) and 21 CFR Parts 314.111(a)(5) and 300.50, demonstrating the effectiveness of the drug(s) for the indication(s) lacking substantial evidence of effectiveness referred to in paragraph A. of this notice.

Notice is given to the holder(s) of the new drug application(s), and to all other interested persons, that the Director of the Bureau of Drugs proposes to issue an order under section 505(e) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355(e)), withdrawing approval of the new drug application(s) and all amendments and supplements thereto providing for the indication(s) lacking substantial evidence of effectiveness referred to in paragraph A. of this notice, on the ground that new information before him with respect to the drug product(s), evaluated together with the evidence available to him at the time of approval of the application(s), shows there is a lack of substantial evidence that the drug product(s) will have all the effects it purports or is represented to have under the conditions of use prescribed, recommended, or suggested in the labeling. An order withdrawing approval will not issue with respect to any application(s) supplemented, in accord with this notice, to delete the claim(s) lacking substantial evidence of effectiveness.

In addition to the ground for the proposed withdrawal of approval stated above, this notice of opportunity for hearing encompasses all issues relating to the legal status of the drug products subject to it (including identical, related, or similar drug products as defined in 21

CFR 310.6), e.g., any contention that any such product is not a new drug because it is generally recognized as safe and effective within the meaning of section 201(p) of the act or because it is exempt from part or all of the new drug provisions of the act pursuant to the exemption for products marketed prior to June 25, 1938, contained in section 201(p) of the act, or pursuant to section 107(c) of the Drug Amendments of 1962; or for any other reason.

In accordance with the provisions of section 505 of the act (21 U.S.C. 355) and the regulations promulgated thereunder (21 CFR Parts 310, 314), the applicant(s) and all other persons who manufacture or distribute a drug product which is identical, related, or similar to a drug product named above (21 CFR 310.6), are hereby given an opportunity for a hearing to show why approval of the new drug application(s) providing for the claim(s) involved should not be withdrawn and an opportunity to raise for administrative determination, all issues relating to the legal status of a drug product named above and all identical, related, or similar drug products.

If an applicant or any person subject to this notice pursuant to 21 CFR 310.6 elects to avail himself of the opportunity for a hearing, he shall file (1) on or before October 31, 1977, a written notice of appearance and request for hearing; and (2) on or before November 29, 1977, the data, information, and analyses on which he relies to justify a hearing as specified in 21 CFR 314.200. Any other interested person may also submit comments on this proposal to withdraw approval. The procedures and requirements governing this notice of opportunity for hearing, a notice of appearance and request for hearing, a submission of data, information, and analyses to justify a hearing, other comments, and a grant or denial of hearing, are contained in 21 CFR 314.200.

The failure of an applicant or any other person subject to this notice pursuant to 21 CFR 310.6 to file timely written appearance and request for hearing as required by 21 CFR 314.200 constitutes an election by such person not to avail himself of the opportunity for a hearing concerning the action proposed with respect to such drug product and a waiver of any contentions concerning the legal status of such drug product. Any such drug product labeled for the indication(s) lacking substantial evidence of effectiveness referred to in paragraph A. of this notice may not thereafter lawfully be marketed, and the Food and Drug Administration will initiate appropriate regulatory action to remove such drug products from the market. Any new drug product marketed without an approved NDA is subject to regulatory action at any time.

A request for a hearing may not rest upon mere allegations or denials, but must set forth specific facts showing that there is a genuine and substantial issue of fact that requires a hearing. If it conclusively appears from the face of the data, information, and factual analyses

in the request for the hearing that there is no genuine and substantial issue of fact which precludes the withdrawal of approval of the application, or when a request for hearing is not made in the required format or with the required analyses, the Commissioner will enter summary judgment against the person(s) who requests the hearing, making findings and conclusions, denying a hearing.

All submissions pursuant to this notice of opportunity for hearing shall be filed in quintuplicate. Such submissions, except for data and information prohibited from public disclosure pursuant to 21 U.S.C. 331(j) or 18 U.S.C. 1905, may be seen in the office of the Hearing Clerk (address given above) between the hours of 9 a.m. and 4 p.m., Monday through Friday.

This notice is issued under the Federal Food, Drug, and Cosmetic Act (secs. 502, 505, 52 Stat. 1050-1053, as amended (21 U.S.C. 352, 355)) and under the authority delegated to the Director of the Bureau of Drugs (21 CFR 5.82).

Dated: September 22, 1977.

J. RICHARD CROUT,  
Director, Bureau of Drugs.

##### Corrections

In FR Doc. 77-24971 appearing at page 43772 in the issue for Tuesday, August 30, 1977, the following corrections should be made:

1. On page 43772, second column, line 7, the citation, "21 CFR 558.78", should read, "21 CFR 558.76".
2. On page 43773, second column, line 37, the citation, "U.S.C. 349", should read, "U.S.C. 348".
3. On page 43774, first column, line 9 of paragraph 2, the designation, "(e)", should read, "(c)".
4. In the third column, line 2, the word, "advisory", should read, "discovery".
5. On page 43780, second column, line 35, the word, "translate", should read, "translocate".
6. In the third column, line 5 of reference 11, now reading, "Biology, 97: 561-515, 1975", should read, "Biology, 97: 561-575, 1975".
7. In line 3 of reference 13, influenzae type "D", should read, "B".
8. In the tables on pages 43781 and 43783, under the heading "Group", "B" should read, "B<sub>1</sub>"; "B", should read, B<sub>2</sub>"; "D", should read, "D<sub>1</sub>", and "D", should read, "D<sub>2</sub>".
9. On page 43792, first column, line 8 of paragraph (e), the word, "letter", should read, "latter".

##### HEALTH CARE SERVICES

##### Open Meeting

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: This document announces the forthcoming Boston regional Ad Hoc Professional and Consumer Meetings to be chaired by the Commissioner of Food and Drugs.

DATES: The professional meeting will begin at 7:30 p.m., Tuesday, October 18, 1977. The consumer meeting will begin at 9 a.m. on Wednesday, October 19, 1977. Registration will begin one half hour prior to each meeting.

ADDRESS: Both meetings will be held at the Museum of Science (Morris Auditorium), Science Park, Boston, Mass. 02114.

FOR FURTHER INFORMATION CONTACT:

Yolan Harsanyi, Consumer Affairs Officer (HFR-1145), Food and Drug Administration, Department of Health, Education, and Welfare, 585 Commercial St., Boston, Mass. 02109, (167-223-5857).

SUPPLEMENTARY INFORMATION: The purpose of each meeting is to exchange views and information of mutual interest. The professional meeting will focus on medical and other scientific issues relating to the Food and Drug Administration (FDA). In addition, there will be an opportunity for practitioners to identify with the Commissioner ways in which FDA can better serve the practitioners and their patients. The consumer meeting will focus on consumer issues (i.e., food additives, over-the-counter drugs, and other FDA-related topics). It will also provide an opportunity for consumers to discuss with the Commissioner ways in which FDA can better meet their needs. Both meetings are open to all interested persons.

Dated: September 23, 1977.

JOSEPH P. HILE,  
Associate Commissioner  
for Compliance.

##### MATRIX APPROACH SUBCOMMITTEE OF THE SCIENCE ADVISORY BOARD Meeting Change

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: The Matrix Approach Subcommittee of the Science Advisory Board meeting scheduled for September 30, 1977 has been rescheduled for October 18, 1977.

FOR FURTHER INFORMATION CONTACT:

Ruth S. Magee, National Center for Toxicological Research, Jefferson, Ark. 72079, (501-541-4528).

SUPPLEMENTARY INFORMATION: Under the Federal Advisory Committee Act of October 6, 1972 (Pub. L. 92-463, 86 Stat. 770-776 (5 U.S.C. App. I)), the Food and Drug Administration announced in a notice published in the FEDERAL REGISTER of August 12, 1977 (42 FR 40958), meetings of FDA public advisory committees and other required information in accordance with provisions set forth in section 10(a) (1) and (2) of the act.

Notice is hereby given that the meeting of the Matrix Approach Subcommittee of the Science Advisory Board scheduled for September 30, 1977, has been changed to October 18, 1977. The open public hearing will begin at 9 a.m. at the National Center for Toxicological Research, Jefferson, Arkansas.

Dated: September 22, 1977.

WILLIAM F. RANDOLPH,  
Acting Associate  
Commissioner for Compliance.

[Docket No. 77F-0262]

##### USS AGRI-CHEMICALS DIVISION

##### Filing of Petition for Food Additive Permitted in Animal Feed

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: USS Agri-Chemicals Division has filed a petition proposing that the regulations for food additives permitted in animal feed be amended to provide for direct mixing of anhydrous ammonia with corn plant material.

FOR FURTHER INFORMATION CONTACT:

William D. Price, Bureau of Veterinary Medicine (HFV-123), Food and Drug Administration, Department of Health, Education, and Welfare, 5600 Fishers Lane, Rockville, Md. 20857 (301-443-3442).

SUPPLEMENTARY INFORMATION: Pursuant to provisions of the Federal Food, Drug, and Cosmetic Act (sec. 409 (b) (5), 72 Stat. 1786 (21 U.S.C. 348(b) (5))), notice is given that a petition (MF-3673) has been filed by USS Agri-Chemicals Division, United States Steel Corp., P.O. Box 1685, Atlanta, Ga. 30301, proposing that § 573.180 *Anhydrous ammonia* (21 CFR 573.180) be amended to provide for direct mixing of cold liquid ammonia with freshly chopped corn plant material before ensiling, as a source of nonprotein nitrogen in cattle feed.

The Commissioner of Food and Drugs has reviewed the potential environmental impact of the proposed regulation. He has concluded that the proposed action would not significantly affect the quality

of the human environment. Therefore, an environmental impact statement would not be required. Copies of the statement of exemption may be seen in the office of the Hearing Clerk (HFC-20), Food and Drug Administration, Room 4-65, 5600 Fishers Lane, Rockville, Md. 20857, between 9 a.m. and 4 p.m., Monday through Friday.

Dated: September 21, 1977.

C. D. VAN HOUWELING,  
Director, Bureau  
of Veterinary Medicine.

##### National Institute of Education BASIC SKILLS RESEARCH GRANTS PROGRAM

##### Closing Date for Receipt of Applications

Notice is hereby given that pursuant to the authority contained in section 405 of the General Education Provisions Act, as amended (20 U.S.C. 1221e), applications are being accepted for grants under the Basic Skills Research Grants Program.

Applications must be received by the National Institute of Education Proposal Clearinghouse on or before November 30, 1977.

A. *Applications sent by mail.* An application sent by mail should be addressed as follows: National Institute of Education, Proposal Clearinghouse, Washington, D.C. 20208. An application sent by mail will be considered to be received on time by the Clearinghouse if:

- (1) It is received at the Clearinghouse by 4:30 p.m., November 30, 1977; or
- (2) The application was sent by registered or certified mail not later than 5:00 p.m. on November 25, 1977, as evidenced by the U.S. Postal Service postmark on the wrapper or on the original receipt from the U.S. Postal Service.

B. *Hand delivered applications.* An application to be hand delivered must be brought to the Proposal Clearinghouse, Room 708, 1832 M Street NW., Washington, D.C. 20208. An application will be accepted daily between the hours of 8:00 a.m. and 4:30 p.m., Washington, D.C., time, except Saturdays, Sundays, and Federal holidays. A receipt will be issued upon acceptance of the application package. No other office in the NIE shall be authorized to accept applications for this program.

C. *Program information and forms.* Application guidelines and program information may be obtained from the Basic Skills Group, National Institute of Education, 1200 19th Street NW., Washington, D.C. 20208, or Telephone: 202-254-5766.

D. *Applicable regulations.* The regulations applicable to this program include the National Institute of Education General Provisions Regulations (45 CFR Subchapter A) published in the FEDERAL REGISTER on November 4, 1974, at (39 FR 38992); the regulations for the Basic Skills Grants Program published on September 28, 1976, at (41 FR 42661) and amendments thereto which are published in proposed form in this issue of the FEDERAL REGISTER (20 U.S.C. 1221e).

##### National Institutes of Health ANIMAL RESOURCES ADVISORY COMMITTEE

##### Notice of Meeting

Pursuant to Public Law 92-463, notice is hereby given of the meeting of the Animal Resources Advisory Committee, Division of Research Resources, November 2-3, 1977, Main Conference Room, Lovelace Inhalation Toxicology Research Institute, Kirtland Air Force Base East, Albuquerque, N. Mex. 87115.

The meeting will be open to the public on November 2 from 8:30 a.m. to 2:30

p.m., during which time there will be a brief staff presentation on the current status of the Animal Resources Program. The Committee will select future meeting dates. Attendance by the public will be limited to space available.

In accordance with the provisions set forth in Sections 552b(c) (4) and 552b(c) (6), Title 5, U.S. Code and Section 10(d) of Pub. L. 92-463, the meeting will be closed to the public on November 2 from 2:30 to 5 p.m. and on November 3 from 8:30 a.m. to adjournment for the review, discussion, and evaluation of individual research grant applications, individual research service awards, and contract proposals. These applications and proposals and the discussions could reveal confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the applications.

Mr. James Augustine, Information Officer, Division of Research Resources, National Institutes of Health, Room 5B13, Bldg. 31, National Institutes of Health, Bethesda, Md. 20014, (301-496-5545), will provide summaries of the meeting and rosters of the Committee members. Dr. Dennis O. Johnsen, Executive Secretary of the Animal Resources Advisory Committee, Room 5B55, Bldg. 31, National Institutes of Health, Bethesda, Md. 20014, (301-496-5175), will furnish substantive program information.

(Catalog of Federal Domestic Assistance Programs No. 13.306, National Institutes of Health.)

Dated: September 19, 1977.

SUZANNE L. FREMEAUX,  
Committee Management Officer,  
National Institutes of Health.

##### BIOMEDICAL LIBRARY REVIEW COMMITTEE

###### Meeting

Pursuant to Public Law 92-463, notice is hereby given of the meeting of the Biomedical Library Review Committee, National Library of Medicine, on November 16-17, 1977, from 8:30 a.m. to 5 p.m. on November 16, and from 8:30 a.m. to adjournment on November 17, in the Board Room of the National Library of Medicine, 8600 Rockville Pike, Bethesda, Md.

This meeting will be open to the public from 8:30 to 11 a.m. on November 16 for the discussion of administrative reports and program developments. Attendance by the public will be limited to space available.

In accordance with provisions set forth in Sections 552b(c)(4) and 552b(c)(6), Title 5, U.S. Code and Section 10(d) of Pub. L. 92-463, the meeting will be closed to the public on November 16 from 11 a.m. to 5 p.m., and from 8:30 a.m. to adjournment on November 17 for the review, discussion and evaluation of individual grant applications. These applications and the discussions could reveal confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the applications.

Dr. Roger W. Dahlen, Executive Secretary of the Committee, and Chief, Division of Biomedical Information Support, Extramural Programs, National Library of Medicine, 8600 Rockville Pike, Bethesda, Md. 20014, telephone No. 301-496-4191, will provide summaries of the meeting, rosters of committee members, and other information pertaining to the meeting.

(Catalog of Federal Domestic Assistance Program Nos. 13.348, 13.349, 13.351, 13.352, 13.881, National Institutes of Health.)

##### CELLULAR AND MOLECULAR BASIS OF DISEASE REVIEW COMMITTEE

###### Meeting

Pursuant to Public Law 92-463, notice is hereby given of the meeting of the Cellular and Molecular Basis of Disease Review Committee, National Institute of General Medical Sciences, November 7, 1977, National Institutes of Health, Westwood Building, Room 9A12, 5333 Westward Avenue, Bethesda, Md.

This meeting will be open to the public on November 7, 1977, from 9 a.m. to 1 p.m. and 1:30 p.m. to adjournment for background information and discussion of issues relevant to the National Institute of General Medical Sciences and its National Research Service Award training activities and research program. Attendance by the public will be limited to space available.

In accordance with provisions set forth in Title 5, U.S. Code 552b(c)(6), the meeting will be closed to the public from 1 p.m. to 1:30 p.m. on November 7, 1977, for the review, discussion, and evaluation of a grant application. This application could reveal personal information concerning individuals associated with the application.

Mr. Paul Deming, Research Reports Officer, NIGMS, National Institutes of Health, Room 9A05, Westwood Building, Bethesda, Md. 20014 (telephone 301-496-7301), will provide summaries of the meeting and the roster of committee members.

Dr. Lee Van Lenten, Executive Secretary, CMBD Review Committee, NIGMS, National Institutes of Health, Room 907, Westwood Building, Bethesda, Md. 20014 (telephone 301-496-7621) will furnish substantive program information.

(Catalog of Federal Domestic Assistance Program No. 13-863, General Medical Sciences.)

Dated: September 19, 1977.

##### GENERAL RESEARCH SUPPORT PROGRAM ADVISORY COMMITTEE

###### Meeting

Pursuant to Public Law 92-463, notice is hereby given of the meeting of the

General Research Support Program Advisory Committee, Division of Research Resources, November 17-18, 1977, from 9 a.m. to 5 p.m. in Building 31, Conference Room 9, National Institutes of Health, Bethesda, Md. 20014.

This meeting will be open to the public from 9 a.m. to 1:30 p.m. on November 17, 1977, to discuss administrative matters relating to the programs. Attendance by the public will be limited to space available.

In accordance with provisions set forth in Sections 552b(c)(4) and 552b(c)(6), Title 5, U.S. Code and Section 10(d) of Public Law 92-463, the meeting will be closed to the public on November 17, 1977, from 1:30 p.m. to 5 p.m., and on November 18, 1977, from 9 a.m. to adjournment for the review, discussion, and evaluation of individual grant applications. These applications and the discussions could reveal confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the applications.

Mr. James Augustine, Information Officer, Division of Research Resources, National Institutes of Health, Room 5B13, Building 31, Bethesda, Md. 20014, (301) 496-5545, will provide summaries of the meeting, and rosters of the Committee members. Dr. Sidney A. McNairy, Jr., Executive Secretary of the General Research Support Program Advisory Committee, Building 31, Room 5B33, Bethesda, Md. 20014, (301) 496-6743, will furnish substantive program information.

(Catalog of Federal Domestic Assistance Program No. 13.337 and 13.375, National Institutes of Health.)

Dated: September 22, 1977.

##### HEART, LUNG, AND BLOOD RESEARCH REVIEW COMMITTEE A

###### Meeting

Pursuant to Public Law 92-463, notice is hereby given of the meeting of the Heart, Lung, and Blood Research Review Committee A, National Heart, Lung, and Blood Institute, November 11-12, 1977, Connecticut Room, Holiday Inn, Bethesda, Md.

This meeting will be open to the public on November 11, 1977 from 8:30 a.m. to approximately 9:30 a.m. to discuss administrative details and to hear reports concerning the current status of the National Heart, Lung, and Blood Institute. Attendance by the public will be limited to space available.

In accordance with the provisions set forth in Section 552b(c)(6), Title 5, U.S. Code and Section 10(d) of Pub. L. 92-463, the meeting will be closed to the public

on November 11, 1977 from 9:30 a.m. until the adjournment on November 12, 1977, for the review, discussion and evaluation of individual grant applications.

These applications and the discussions could reveal personal information concerning individuals associated with the applications.

Mr. York E. Onnen, Chief, Public Inquiries and Reports Branch, NHLBI, NIH, Room 5A03, Building 31, Bethesda, Md. 20014, phone (301) 496-4236, will provide summaries of the meeting and rosters of the committee members. Dr. Arthur W. Merrick, Executive Secretary, NHLBI, NIH, Room 552, Westwood Building, Bethesda, Md. 20014, phone (301) 496-7917, will furnish substantive program information.

(Catalog of Federal Domestic Assistance Program No. 13.837, 13.838, National Institutes of Health.)

Dated: September 19, 1977.

##### INFECTIOUS DISEASE COMMITTEE Meeting

Pursuant to Pub. L. 92-463, notice is hereby given of the meeting of the Infectious Disease Committee, National Institute of Allergy and Infectious Diseases on November 10-11, 1977, in Building 31C, Conference Room 7, at the National Institutes of Health, Bethesda, Md.

This meeting will be open to the public from 9 a.m. until 10:30 a.m. on November 10 to discuss program policies and issues. Attendance by the public will be limited to space available.

In accordance with the provisions set forth in sections 552b(c)(4) and 552(c)(6), Title 5, U.S. Code and section 10(d) of Pub. L. 92-463, the meeting of the Committee will be closed to the public 10:30 a.m. until recess on November 10, and from 9 a.m. until adjournment on November 11, for the review, discussion, and evaluation of individual grant applications. These applications, and the discussions could reveal confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the applications.

Mr. Robert L. Schreiber, Chief, Office of Research Reporting and Public Response, NIAID, National Institutes of Health, Building 31, Room 7A32, Bethesda, Md. 20014 (301-496-5717), will provide summaries of the meeting, and rosters of the Committee members.

Dr. James A. Ferguson, Executive Secretary, Infectious Disease Committee, NIAID, National Institutes of Health, Westwood Building, Room 706, Bethesda, Md. (301-496-7465), will provide substantive program information.

(Catalog of Federal Domestic Assistance Program No. 13.856, National Institutes of Health.)

##### MATERNAL AND CHILD HEALTH RESEARCH COMMITTEE

###### Meeting

Pursuant to Pub. L. 92-463, notice is hereby given of the meeting of the Ma-

ternal and Child Health Research Committee, National Institute of Child Health and Human Development, on November 14-15, 1977, in the Landow Building, Room C-418, 7910 Woodmont Avenue, Bethesda, Md.

This meeting will be open to the public on November 14 from 9 a.m. to 10:30 a.m. to discuss items relative to the Committee's activities including announcements by the Director, Center for Research for Mothers and Children, the Chiefs, Human Learning and Behavior, Pregnancy and Infancy, and Developmental Biology and Nutrition Branches and the Executive Secretary of the Committee. Concept clearance for contract programs of the Center for Research for Mothers and Children will be discussed. Attendance by the public will be limited to space available.

In accordance with the provisions set forth in Title 5, U.S. Code 552b(c)(4) and 552b(c)(6) and section 10(d) of Pub. L. 92-463, the meeting will be closed to the public on November 14 from 10:30 a.m. to adjournment on November 15 for the review, discussion, and evaluation of individual grant applications. The applications and the discussions could reveal confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the applications.

Mrs. Marjorie Neff, Committee Management Officer, NICHD, Building 31, Room 2A-04, National Institutes of Health, Bethesda, Md., area code 301-496-1848, will provide a summary of the meeting and a roster of committee members. Mr. Jehu Hunter, Acting Executive Secretary, Maternal and Child Health Research Committee, NICHD, Landow Building, Room C717, National Institutes of Health, Bethesda, Md., area code 301-495-5575, will furnish substantive program information.

##### NIH PUBLIC ADVISORY COMMITTEES Notice of Renewal

Pursuant to the Federal Advisory Committee Act of October 6, 1972 (Public Law 92-463, 86 Stat. 770-778), the National Institutes of Health announces the renewal by the Secretary, HEW, with the concurrence of the Office of Management and Budget Committee Management Secretariat, of the following committees:

Advisory Committee to the Director, National Institutes of Health  
Allergy and Immunology Study Section

Applied Physiology and Orthopedics Study Section  
Artificial Kidney-Chronic Uremia Advisory Committee

Bacteriology and Mycology Study Section  
Biochemistry Study Section  
Biomedical Library Review Committee  
Biophysics and Biophysical Chemistry A Study Section  
Biophysics and Biophysical Chemistry B Study Section

Board of Scientific Counselors, National Institute on Aging  
Board of Scientific Counselors, National Institute of Arthritis, Metabolism, and Digestive Diseases  
Board of Scientific Counselors, National Institute of Child Health and Human Development

Board of Scientific Counselors, National Institute of Environmental Health Sciences  
Cell Biology Study Section  
Developmental Behavioral Sciences Study Section

Endocrinology Study Section  
General Medicine A Study Section  
Maternal and Child Health Research Committee

Mental Retardation Research Committee  
National Advisory Child Health and Human Development Council  
National Advisory Environmental Health Sciences Council

National Arthritis, Metabolism, and Digestive Diseases Advisory Council  
Oral Biology and Medicine Study Section  
Population Research Committee

Authority for the above committee will expire on November 30, 1977, unless the Secretary formally determines that continuance is in the public interest.

Allergy and Clinical Immunology Research Committee  
Arteriosclerosis and Hypertension Advisory Committee

Blood Diseases and Resources Advisory Committee  
Board of Scientific Counselors, National Eye Institute

Board of Scientific Counselors, National Heart, Lung, and Blood Institute  
Board of Scientific Counselors, National Institute of Allergy and Infectious Diseases  
Cardiology Advisory Committee

Cardiovascular and Pulmonary Study Section  
Clinical Applications and Prevention Advisory Committee  
Clinical Trials Review Committee

Communicative Sciences Study Section  
Experimental Psychology Study Section  
Heart, Lung, and Blood Research Review Committee A

Heart, Lung, and Blood Research Review Committee B  
Immunobiology Study Section  
Lipid Metabolism Advisory Committee

Microbiology and Infectious Diseases Advisory Committee  
National Advisory Allergy and Infectious Diseases Council  
National Advisory Eye Council

National Heart, Lung, and Blood Advisory Council  
Neurology A Study Section  
Physiological Chemistry Study Section

Pulmonary Diseases Advisory Committee  
Radiation Study Section  
Research Manpower Review Committee

Sickle Cell Disease Advisory Committee  
Surgery, Anesthesiology and Trauma Study Section  
Toxicology Study Section

Transplantation Biology and Immunology Committee  
Vision Research Program Committee

Authority for the above committees will expire on December 31, 1977, unless the Secretary formally determines that continuance is in the public interest.

Dated: September 17, 1977.

DONALD S. FREDERICKSON,  
Director, NIH.

##### National Institutes of Health RESEARCH MANPOWER REVIEW COMMITTEE Meeting

Pursuant to Pub. L. 92-463, notice is hereby given of the meeting of the Research Manpower Review Committee, National Heart, Lung, and Blood Institute, November 18, 1977, Conference Room C 428, Landow Building, 7910 Woodmont Avenue, Bethesda, Md.

This meeting will be open to the public on November 18, 1977 from 8 a.m. to approximately 9 a.m. to discuss administrative details and to hear reports concerning the current status of the National Heart, Lung, and Blood Institute.

In accordance with the provisions set forth in section 552b(c)(6), Title 5, U.S. Code and section 10(d) of Pub. L. 92-463, the meeting will be closed to the public on November 18, 1977, from 9 a.m. until adjournment for the review, discussion, and evaluation of individual grant applications. These applications and the discussions could reveal personal information concerning individuals associated with the applications.

Mr. York E. Onnen, Chief, Public Inquiries and Reports Branch, NHLBI,

NIH, Room 5A03, Building 31, Bethesda, Md. 20014, phone 301-496-4236, will provide summaries of the meeting and rosters of the committee members.

Dr. Charles L. Turbyfill, Executive Secretary, NHLBI, NIH, Room 553, Westwood Building, Bethesda, Md. 20014, phone 301-496-7351, will furnish substantive program information.

(Catalog of Federal Domestic Assistance Program No. 13.837, National Institutes of Health.)

Dated: September 22, 1977.

SUZANNE L. FREMEAUX,  
Committee Management Officer,  
National Institute of Health.

##### TRANSPLANTATION IMMUNOLOGY COMMITTEE Meeting

Pursuant to Pub. L. 92-463 notice is hereby given of the meeting of the Transplantation Immunology Committee, National Institute of Allergy and Infectious Diseases on November 17-18, 1977, at the National Institutes of Health, Building 31C, Conference Room 7, Bethesda, Md.

This meeting will be open to the public from 9 a.m. until 12 noon on November 17 to discuss program policies and issues. Attendance by the public will be limited to space available.

In accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5, U.S. Code and section 10(d) of Pub. L. 92-463, the meeting of the Committee will be closed to the public from 1 p.m. until recess on November 17, and from 9 a.m. to adjournment on November 18 for the review, discussion, and evaluation of individual grant applications and contract proposals. These applications, proposals, and discussions could reveal confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the applications and proposals.

Mr. Robert L. Schreiber, Chief, Office of Research Reporting and Public Response, NIAID, Building 31, Room 7A32, National Institutes of Health, Bethesda, Md. 20014, telephone 301-496-5717, will provide summaries of the meeting, and rosters of the Committee members.

Dr. John G. Ray, Acting Executive Secretary, Transplantation Immunology Committee, NIAID, NIH, Westwood Building, Room 7A03, will provide substantive program information.

(Catalog of Federal Domestic Assistance Program No. 13.855, National Institutes of Health.)

Dated: September 22, 1977.

SUZANNE L. FREMEAUX,  
Committee Management Officer,  
National Institute of Health.

**DEPARTMENT OF THE INTERIOR**  
 Bureau of Land Management  
 [CA 2642]  
**CALIFORNIA**

**Notice of Opportunity for Public Hearing  
 and Republication of Notice of Proposed  
 Withdrawal**

SEPTEMBER 23, 1977.

The Bureau of Land Management, U.S. Department of the Interior, filed application Serial No. CA 2642 on January 23, 1975, for a withdrawal in relation to the following described lands:

MOUNT DIABLO MERIDIAN, CALIFORNIA

T. 30 S., R. 38 E.,  
 Sec. 34, S $\frac{1}{2}$ .  
 T. 31 S., R. 38 E.,  
 Secs. 1 to 4, inclusive;  
 Sec. 5, NE $\frac{1}{4}$ SW $\frac{1}{4}$ , N $\frac{1}{2}$ SE $\frac{1}{4}$ , and SE $\frac{1}{4}$ SE $\frac{1}{4}$ ;  
 Sec. 8, all;  
 Sec. 9, N $\frac{1}{2}$ , E $\frac{1}{2}$ SW $\frac{1}{4}$ , and SE $\frac{1}{4}$ ;  
 Sec. 10, all;  
 Sec. 11, N $\frac{1}{2}$  and SW $\frac{1}{4}$ ;  
 Sec. 12, all;  
 Sec. 14, all;  
 Sec. 18, N $\frac{1}{2}$  and SE $\frac{1}{4}$ ;  
 Secs. 20, 22, 24, 26, 28, 30, 32, and 34, inclusive.

The area described aggregates 12,256.99 acres.

The applicant desires that the land be reserved as a sanctuary for the desert tortoise and a reserve for the components of its habitat.

A notice of the proposed withdrawal was published in the FEDERAL REGISTER on March 6, 1975, pages 10491 and 10492, FR Doc. 75-5947.

Pursuant to sec. 204(h) of the Federal Land Policy and Management Act of 1976, 90 Stat. 2754, notice is hereby given that an opportunity for a public hearing is afforded in connection with the pending withdrawal application. All interested persons who desire to be heard on the proposed withdrawal must file a written request for a hearing to the State Director, Bureau of Land Management, E-2841 Federal Office Building, 2800 Cottage Way, Sacramento, Calif. 95825, on or before November 2, 1977. All previous comments submitted in connection with the withdrawal application have been included in the record and will be considered in making a final determination on the application.

In lieu of or in addition to attendance at a scheduled public hearing, written comments or objections to the pending withdrawal application may be filed with the undersigned authorized officer of the Bureau of Land Management on or before November 2, 1977.

The above described lands are temporarily segregated from the operation of the public land laws, including the mining laws (30 U.S.C., Ch. 2), to the extent that the withdrawal applied for, if and when effected, would prevent any form of disposal or appropriation under such laws. Current administrative jurisdiction over the segregated lands will

not be affected by the temporary segregation. In accordance with section 204 (g) of the Federal Land Policy and Management Act of 1976, the segregative effect of the pending withdrawal application will terminate on October 20, 1991, unless sooner terminated by action of the Secretary of the Interior.

All communications (except for public hearing requests) in connection with the pending withdrawal application should be addressed to the undersigned, Bureau of Land Management, Department of the Interior, Room E-2841 Federal Office Building, 2800 Cottage Way, Sacramento, Calif. 95825.

JOAN B. RUSSELL,  
 Chief, Lands Section  
 Branch of Lands and Minerals Operations.

**Notice of Opportunity for Public Hearing  
 and Republication of Notice of Proposed  
 Withdrawal**

The Bureau of Reclamation, U.S. Department of the Interior filed application Serial No. SAC 074614 on February 14, 1963, for a withdrawal in relation to the following described public lands:

MOUNT DIABLO MERIDIAN, CALIF.

T. 7 N., R. 8 E.,  
 Sec. 3, lot 10.  
 T. 7 N., R. 9 E.,  
 Sec. 5, E $\frac{1}{2}$ NE $\frac{1}{4}$ SW $\frac{1}{4}$  and W $\frac{1}{2}$ SW $\frac{1}{4}$ .  
 T. 8 N., R. 9 E.,  
 Sec. 13, E $\frac{1}{2}$ SE $\frac{1}{4}$ ;  
 Sec. 24, lots 1, 2, and 3, new Virginia mine (M.S. 3904), and E $\frac{1}{2}$ E $\frac{1}{2}$ ;  
 Sec. 25, lots 1, 2, and 3, E $\frac{1}{2}$ NW $\frac{1}{4}$ , and W $\frac{1}{2}$ NE $\frac{1}{4}$ ;  
 Sec. 26, SE $\frac{1}{4}$ NE $\frac{1}{4}$ NE $\frac{1}{4}$  and NE $\frac{1}{4}$ SE $\frac{1}{4}$ SE $\frac{1}{4}$ .  
 T. 7 N., R. 10 E.,  
 Sec. 2. That certain tract of public land near the N $\frac{1}{4}$  corner of sec. 2 being mineral land and adjoining the northeastern boundary of lot 3 of sec. 2.

T. 8 N., R. 10 E.,  
 Sec. 12, lot 5 and NE $\frac{1}{4}$ NE $\frac{1}{4}$ ;  
 Sec. 18, lots 1, 2, 3, and 4, and E $\frac{1}{2}$ SW $\frac{1}{4}$ ;  
 Sec. 19, lots 1, 2, 3, and 4, and E $\frac{1}{2}$ W $\frac{1}{2}$ ;  
 Sec. 22, SW $\frac{1}{4}$ NW $\frac{1}{4}$ ;  
 Sec. 30, lots 1 and 2, NE $\frac{1}{4}$ NW $\frac{1}{4}$ , N $\frac{1}{2}$ SE $\frac{1}{4}$ NW $\frac{1}{4}$ , SW $\frac{1}{4}$ SE $\frac{1}{4}$ NW $\frac{1}{4}$ , and SE $\frac{1}{4}$ NE $\frac{1}{4}$ SW $\frac{1}{4}$ .  
 T. 9 N., R. 10 E.,  
 Sec. 13, lot 15 and unpatented portion of M.S. 4223;  
 Sec. 24, N $\frac{1}{2}$ NW $\frac{1}{4}$  (except M.S. 4749);  
 Sec. 25, lot 6.

T. 9 N., R. 11 E.,  
 Sec. 7, lot 3 (except east 20 acres), lot 4 except east 20 acres), E $\frac{1}{2}$ NW $\frac{1}{4}$ , and NE $\frac{1}{4}$ SW $\frac{1}{4}$ ;  
 Sec. 18 lot 1 (except east 20 acres), lot 2 (except east 20 acres), lot 3 (except east 20 acres), lot 4 (except N $\frac{1}{2}$  of east 20 acres), and E $\frac{1}{2}$ NW $\frac{1}{4}$ ;  
 Sec. 22, W $\frac{1}{2}$ SW $\frac{1}{4}$ ;  
 Sec. 24, NE $\frac{1}{4}$ NE $\frac{1}{4}$ ;  
 Sec. 27, N $\frac{1}{2}$ NE $\frac{1}{4}$  and SE $\frac{1}{4}$ NE $\frac{1}{4}$ ;  
 Sec. 28, W $\frac{1}{2}$ NE $\frac{1}{4}$ , SE $\frac{1}{4}$ NE $\frac{1}{4}$ , NE $\frac{1}{4}$ SW $\frac{1}{4}$ , and E $\frac{1}{2}$ SE $\frac{1}{4}$ .

T. 9 N., R. 12 E.,  
 Sec. 14, SW $\frac{1}{4}$ SW $\frac{1}{4}$ ;  
 Sec. 15, S $\frac{1}{2}$ S $\frac{1}{2}$ ;  
 Sec. 17, E $\frac{1}{2}$ NE $\frac{1}{4}$ , S $\frac{1}{2}$ SW $\frac{1}{4}$ , and SE $\frac{1}{4}$ ;  
 Sec. 18, N $\frac{1}{2}$ SE $\frac{1}{4}$ SE $\frac{1}{4}$  and W $\frac{1}{2}$ SW $\frac{1}{4}$ SE $\frac{1}{4}$ SE $\frac{1}{4}$ ;  
 Sec. 19, lots 1 and 3 SE $\frac{1}{4}$ NW $\frac{1}{4}$ , and NE $\frac{1}{4}$ SW $\frac{1}{4}$ ;  
 Sec. 20, E $\frac{1}{2}$ NE $\frac{1}{4}$  and NE $\frac{1}{4}$ NW $\frac{1}{4}$ ;  
 Sec. 21, E $\frac{1}{2}$ NE $\frac{1}{4}$ ;  
 Sec. 22, N $\frac{1}{2}$  and N $\frac{1}{2}$ SW $\frac{1}{4}$ ;  
 Sec. 23, W $\frac{1}{2}$ NW $\frac{1}{4}$ , SE $\frac{1}{4}$ NW $\frac{1}{4}$ , NE $\frac{1}{4}$ SW $\frac{1}{4}$ , and SE $\frac{1}{4}$ ;  
 Sec. 24, lots 1 and 2, portion mineral lot 39 in sec. 24, N $\frac{1}{2}$ SW $\frac{1}{4}$ , SW $\frac{1}{4}$ SW $\frac{1}{4}$ , and NW $\frac{1}{4}$ SE $\frac{1}{4}$ ;  
 Sec. 25, lots 1 and 4, SW $\frac{1}{4}$ NE $\frac{1}{4}$ , E $\frac{1}{2}$ NW $\frac{1}{4}$ NE $\frac{1}{4}$ , E $\frac{1}{2}$ NE $\frac{1}{4}$ , and E $\frac{1}{2}$ NE $\frac{1}{4}$ SW $\frac{1}{4}$ ;  
 Sec. 26, NE $\frac{1}{4}$ NE $\frac{1}{4}$ , S $\frac{1}{2}$ NE $\frac{1}{4}$ , NW $\frac{1}{4}$ NW $\frac{1}{4}$ , and SE $\frac{1}{4}$ NW $\frac{1}{4}$ .

T. 8 N., R. 13 E.,  
 Sec. 2, SW $\frac{1}{4}$ NW $\frac{1}{4}$  and N $\frac{1}{2}$ S $\frac{1}{2}$ ;  
 Sec. 3, lots 1, 2, and 3, and S $\frac{1}{2}$ NE $\frac{1}{4}$ ;  
 Sec. 13, SE $\frac{1}{4}$ NE $\frac{1}{4}$  and N $\frac{1}{2}$ SW $\frac{1}{4}$ ;  
 Sec. 14, S $\frac{1}{2}$ N $\frac{1}{2}$ ;  
 Sec. 15, SE $\frac{1}{4}$ NE $\frac{1}{4}$ .

T. 9 N., R. 13 E.,  
 Sec. 30, lots 1, 2, 3, and 4, E $\frac{1}{2}$ SW $\frac{1}{4}$ , and S $\frac{1}{2}$ SE $\frac{1}{4}$ ;  
 Sec. 31, N $\frac{1}{2}$ NE $\frac{1}{4}$  and SE $\frac{1}{4}$ NE $\frac{1}{4}$ ;  
 Sec. 32, lot 1 (except portion in M.S. 6422), lots 6, 8, 9, 10, 11, and 14, portion of mineral lot 61 in NW $\frac{1}{4}$  sec. 32, mineral lot 61 (except portion in NW $\frac{1}{4}$  sec. 32), and SE $\frac{1}{4}$ NE $\frac{1}{4}$ ;  
 Sec. 33, lots 1, 2, and 4, S $\frac{1}{2}$ NE $\frac{1}{4}$ , and SE $\frac{1}{4}$ NW $\frac{1}{4}$  (except portion in M.S. 6422);  
 Sec. 34, SW $\frac{1}{4}$ NW $\frac{1}{4}$ , N $\frac{1}{2}$ SW $\frac{1}{4}$ , SE $\frac{1}{4}$ SW $\frac{1}{4}$ , and SW $\frac{1}{4}$ SE $\frac{1}{4}$ .

T. 8 N., R. 14 E.,  
 Sec. 4, NE $\frac{1}{4}$ SE $\frac{1}{4}$ ;  
 Sec. 7, lot 4 and SE $\frac{1}{4}$ SW $\frac{1}{4}$ ;  
 Sec. 9, SW $\frac{1}{4}$ NE $\frac{1}{4}$ ;  
 Sec. 12, W $\frac{1}{2}$ NW $\frac{1}{4}$ ;  
 Sec. 18, lot 1.  
 T. 9 N., R. 14 E.,  
 Sec. 11, all (except SE $\frac{1}{4}$ NW $\frac{1}{4}$ );  
 Sec. 12, all.

T. 9 N., R. 15 E.,  
 Sec. 7, lot 4 and SE $\frac{1}{4}$ SW $\frac{1}{4}$ .

1. The aforescribed areas aggregate approximately 7,904.40 acres of Federal land, of which approximately 3,450 acres (in T. 7 N., Rs. 34 and 14 E., and T. 9, Rs. 13, 14, and 15 E., M.D.M.) are in the Eldorado National Forest.

2. The withdrawal affects the following described patented lands, the minerals to which are reserved to the United States:

MOUNT DIABLO MERIDIAN, CALIF.

T. 9 N., R. 10 E.,  
 Sec. 25, lots 5 and 7, and SE $\frac{1}{4}$ SW $\frac{1}{4}$ .  
 T. 9 N., R. 11 E.,  
 Sec. 27, N $\frac{1}{2}$ SW $\frac{1}{4}$ NE $\frac{1}{4}$  and NE $\frac{1}{4}$ NW $\frac{1}{4}$ .  
 T. 8 N., R. 13 E.,  
 Sec. 11, NE $\frac{1}{4}$ SE $\frac{1}{4}$ .

The lands aggregate approximately 195 acres.

The applicant desires that the land be reserved for the construction, operation, and maintenance of the planned facilities of the Cosumnes River Division of the Central Valley Project, Calif.

A notice of the proposed withdrawal was published in the FEDERAL REGISTER on March 21, 1963, pages 2831 and 2832, FR Doc. 63-2939.

Pursuant to sec. 204(h) of the Federal Land Policy and Management Act of

1976, 90 Stat. 2754, notice is hereby given that an opportunity for a public hearing is afforded in connection with the pending withdrawal application. All interested persons who desire to be heard on the proposed withdrawal must file a written request for a hearing to the undersigned, Bureau of Land Management, E-2841 Federal Office Building, 2800 Cottage Way, Sacramento, Calif. 95825, on or before November 2, 1977. All previous comments submitted in connection with the withdrawal application have been included in the record and will be considered in making a final determination on the application.

In lieu of or in addition to attendance at a scheduled public hearing, written comments or objections to the pending withdrawal application may be filed with the undersigned authorized officer of the Bureau of Land Management on or before November 2, 1977.

The public lands described in Paragraph 1 are temporarily segregated from the operation of the public land laws, including the mining laws (30 U.S.C., Ch. 2), and the patented lands described in Paragraph 2 are temporarily segregated from the mining laws, to the extent that the withdrawal applied for, if and when effected, would prevent any form of disposal or appropriation under such laws. Current administrative jurisdiction over the segregated lands will not be affected by the temporary segregation. In accordance with section 204(g) of the Federal Land Policy and Management Act of 1976, the segregative effect of the pending withdrawal application will terminate on October 20, 1991, unless sooner terminated by action of the Secretary of the Interior.

All communications in connection with the pending withdrawal application should be addressed to the undersigned, Bureau of Land Management, Department of the Interior, Room E-2841 Federal Office Building, 2800 Cottage Way, Sacramento, Calif. 95825.

JOAN B. RUSSELL,  
 Chief, Lands Section, Branch  
 of Lands and Minerals Operations.

**[4310]**

[C-24401]  
**COLORADO**

**Order Providing for Opening of Public  
 Lands**

1. By Powersite Cancellation No. 338 of November 15, 1976, the U.S. Geological Survey cancelled Power Site Classification No. 87 of February 14, 1925, as to the following described lands:

6TH PRINCIPAL MERIDIAN, COLO.

T. 6 N., R. 98 W.,  
 Sec. 5, lots 6, 18, and 19;  
 Sec. 7, lot 9 and SE $\frac{1}{4}$ NE $\frac{1}{4}$ ;  
 Sec. 8, lots 7 and 17;  
 Sec. 17, lot 27;  
 Sec. 18, lots 13, 14, 16, 17, 18, SE $\frac{1}{4}$ NW $\frac{1}{4}$  and E $\frac{1}{2}$ SW $\frac{1}{4}$ ;  
 Sec. 19, lots 5, 6, 11, 12, 15, and 16;  
 Sec. 20, lots 1, 2, 7, 8, 9, and 10;

Sec. 21 lots 1, 3, 8, 10, 14, 16, and 19;  
 Sec. 22, lots 3, 4, and 6;  
 Sec. 30, lots 6, 7, 9, 10, 11, 12, 13, and SW $\frac{1}{4}$ NE $\frac{1}{4}$ ;  
 T. 7 N., R. 98 W.,  
 Sec. 29, SE $\frac{1}{4}$ SW $\frac{1}{4}$ ;  
 Sec. 32, lots 3, 5, 14, 16, and SW $\frac{1}{4}$ NW $\frac{1}{4}$ ;  
 T. 6 N., R. 99 W.,  
 Sec. 22, SE $\frac{1}{4}$ SE $\frac{1}{4}$ ;  
 Sec. 24, lot 1;  
 Sec. 25, lots 9, 10, 11, 16, 18, 20, and SE $\frac{1}{4}$ SE $\frac{1}{4}$ ;  
 Sec. 26, lots 16 and 18;  
 Sec. 27, lots 7, 10, 11, 15, 16, and SW $\frac{1}{4}$ SW $\frac{1}{4}$ ;  
 Sec. 28, E $\frac{1}{2}$ SE $\frac{1}{4}$ ;  
 Sec. 35, NW $\frac{1}{4}$ NW $\frac{1}{4}$ ;  
 Sec. 36, NW $\frac{1}{4}$ NE $\frac{1}{4}$ .

The areas described aggregate 1,523.36 acres in Moffat County.

These lands are on the edges of the valleys of the Yampa and Little Snake Rivers, 20 miles west of Maybell, in northwestern Colorado. Topography is moderately rough, with generally shallow, rocky soils. Native vegetation is sagebrush and greasewood.

2. Of the lands described in paragraph 1 above, the following are patented:

SIXTH PRINCIPAL MERIDIAN

T. 8 N., R. 98 W.,  
 Sec. 18, lot 16;  
 Sec. 20, lots 1 and 2;  
 Sec. 21, lots 1, 3, 8, and 14;  
 Sec. 22, lots 3 and 4;  
 Sec. 30, lots 10 and 12;  
 T. 6 N., R. 99 W.,  
 Sec. 27, SW $\frac{1}{4}$ SW $\frac{1}{4}$ ;  
 Sec. 28, E $\frac{1}{2}$ SE $\frac{1}{4}$ ;  
 Sec. 35, NW $\frac{1}{4}$ NW $\frac{1}{4}$ .

3. At 10:00 a.m. October 27, 1977, the above described lands shall be open to operation of the public land laws generally, subject to valid existing rights, the provisions of existing withdrawals, and the requirements of applicable law. All valid applications received at or prior to 10:00 a.m. on October 27, 1977, shall be considered as simultaneously filed at that time. Those received thereafter shall be considered in the order of filing.

Inquiries concerning the lands should be addressed to the State Director, Bureau of Land Management, 700 Colorado State Bank Building, 1600 Broadway, Denver, Colo. 80202.

ANDREW W. HEARD, JR.,  
 Acting Chief,  
 Branch of Adjudication.

SEPTEMBER 21, 1977.

[Tentative Sale No. 54]

**SOUTH ATLANTIC BLAKE PLATEAU  
 OUTER CONTINENTAL SHELF**

**Call for Nominations and Comments on  
 Areas for Oil and Gas Leasing**

Pursuant to the authority prescribed in 43 CFR 3301.3 (1976), nominations are hereby requested for areas on the South Atlantic Blake Plateau Outer Continental Shelf (OCS) for possible oil and gas leasing under the Outer Conti-

mental Shelf Lands Act (43 U.S.C. 1331-1343 (1970)). Nominations will be considered for any or all of that part of the following mapped areas beginning at the northwest corner of block 6, found on OCS Official Protraction Diagram NH 18-10; thence east to the northwest corner of block 38; thence south to the northwest corner of block 214; thence west to the northwest corner of block 211; thence south to the northwest corner of block 387; thence west to the northwest corner of block 384; thence south to the northwest corner of block 604; thence west to the northwest corner of block 598; thence south to the northwest corner of block 774; thence west to the northwest corner of block 771; thence south to the northwest corner of block 195, found on OCS Official Protraction Diagram NH 18-1; thence west to the northwest corner of block 190; thence south to the northwest corner of block 938; thence west to the northwest corner of block 957, found on OCS Official Protraction Diagram NH 17-3; thence south to the northwest corner of block 649, found on OCS Official Protraction Diagram NH 17-12; thence west to the northwest corner of block 636; thence south to the northwest corner of block 988; thence west to the northwest corner of block 969; thence north to northwest corner of block 1, found on OCS Official Protraction Diagram NH 17-6; thence east to the northwest corner of block 7; thence north to the northwest corner of block 623, found on OCS Official Protraction Diagram NH 17-3; thence east to the northwest corner of block 642; thence north to the northwest corner of block 687, found on OCS Official Protraction Diagram NH 17-12; thence east to the northwest corner of block 665, found on OCS Official Protraction Diagram NH 18-10, thence north to the point of the beginning.

OCS OFFICIAL PROTRACTION DIAGRAMS

1. NH 18-1.  
 2. NH 18-10.  
 3. NH 17-12.  
 4. NH 17-3.  
 5. NH 17-6.  
 6. NH 17-9.  
 7. NH 17-12.

This area lies offshore the States of North Carolina, South Carolina, Georgia, and Florida.

All these maps may be purchased individually for \$2 each from the Manager, New Orleans Outer Continental Shelf Office, Bureau of Land Management, Suite 841, Hale Boggs Federal Building, 500 Camp Street, New Orleans, Louisiana 70130.

All nominations must be described in accordance with the Outer Continental Shelf Official Protraction Diagrams prepared by the Bureau of Land Management, Department of the Interior and referred to above. Only whole blocks or properly described subdivisions thereof, not less than one quarter of a block, may be nominated.

In addition to requesting nominations of tracts for possible oil and gas leasing within the specified areas, this notice also requests comments identifying par-

ticular tracts recommended to be either specifically excluded from oil and gas leasing or leased only under special conditions because of conflicting values or environmental concerns. Particular geological, environmental, biological, archaeological, socio-economic or other information which might bear upon potential leasing and development of particular tracts is requested where available. Information on these subjects will be used in the tentative selection of tracts which precedes any final selection by the Director pursuant to 43 CFR 3301.4. This information is requested from Federal, State and local governments, industry, universities, research institutes, environmental organizations, and members of the general public. Comments may be submitted on blocks or subdivisions thereof, as required for nominations, or on all areas or portions thereof, as described above. They should be directed to specific factual matters which bear upon the Department's decision whether to make a preliminary selection of particular tracts within these areas for further environmental analysis pursuant to the National Environmental Policy Act of 1969 (42 U.S.C. 4321-4347 (1970)) and possible leasing. Comments relating to general matters which would be applicable to oil and gas operations in any part of the OCS are not sought at this time.

Nominations and comments must be submitted not later than January 20, 1978, in envelopes labeled "Nominations of Tracts for Leasing in the Outer Continental Shelf South Atlantic Blake Plateau" or "Comments on Leasing in the Outer Continental Shelf South Atlantic Blake Plateau," as appropriate. They must be submitted to the Director, Attention 720, Bureau of Land Management, Department of the Interior, Washington, D.C. 20240. Copies must be sent to the Conservation Manager, Geological Survey, Eastern Region, Suite 316, 1825 K Street NW., Washington, D.C. 20006 and to the Manager, New Orleans Outer Continental Shelf Office, Bureau of Land Management at his address cited above.

This call for nominations and comments does not in any way commit the Department to leasing in the South Atlantic Blake Plateau. It is an information gathering component of the Department's leasing procedure.

Final selection of tracts for competitive bidding will be made only after compliance with established Departmental procedures and all requirements of the National Environmental Policy Act of 1969. Notice of any tracts finally selected for competitive bidding will be published in the FEDERAL REGISTER stating the conditions and terms for leasing

and the place, date, and hour at which bids will be received and opened.

GEORGE L. TURCOTT,  
Acting Director, Bureau  
of Land Management.

SEPTEMBER 22, 1977.

Approved:

HEATHER L. ROSS,  
Deputy Assistant, Secretary of  
the Interior.

National Park Service  
INDIANA DUNES NATIONAL LAKESHORE  
ADVISORY COMMISSION

Meeting

Notice is hereby given in accordance with the Federal Advisory Committee Act that a meeting of the Indiana Dunes National Lakeshore Advisory Commission will be held at 10 a.m., CDT, on Friday, October 21, 1977 at the Indiana Dunes National Lakeshore, Tremont, Furnessville Visitor Center, Intersection of State Park Road and U.S. Highway 12, Chesterton, Indiana.

The Commission was established by Pub. L. 89-761 to meet and consult with the Secretary of the Interior on matters related to the administration and development of the Indiana Dunes National Lakeshore.

The members of the Commission are as follows:

Mr. Harry W. Frey (Chairman),  
Mrs. Anna R. Carlson,  
Mr. John A. Hillebrand II,  
Mr. William L. Lieber,  
Mr. Lawrence Miller,  
Mr. John R. Schurleim,  
Mr. Norman E. Tufford,  
Mr. George H. Williams (Secretarial Consultant).

Matters to be discussed at this meeting include:

1. Report on General Management Plan Study.
2. Report on Young Adult Conservation Corps Program.
3. Fly Ash Subcommittee Report.
4. Report on Lakeshore Research Programs.
5. Mt. Baldy Acquisition and Development Progress Report.
6. Report on South Shore Commuter Service.
7. Land Acquisition Report.

The meeting will be open to the public. It is expected that about 90 persons will be able to attend the session in addition to commission members. Interested persons may make written statements. Such requests should be made to the official listed below prior to the meeting.

Further information concerning this meeting may be obtained from James R.

Whitehouse, Superintendent, Indiana Dunes National Lakeshore, Route 2, Box 139-A, Chesterton, Indiana 46304, telephone area code (219-926-7561).

Minutes of the meeting will be available for public inspection three weeks after the meeting at the office of the Indiana Dunes National Lakeshore located at the intersection of State Park Road and U.S. Highway 12, Chesterton, Indiana.

Dated: September 22, 1977.

MERRILL D. BEAL,  
Regional Director,  
Midwest Region.

[Replaces Order No. 78]

REGIONAL DIRECTOR, NATIONAL  
CAPITAL REGION

Delegation of Authority

Section 1. Delegation.—The Regional Director, National Capital Region, in administration, operation, and development of areas and offices under his supervision is authorized to exercise all the authority now or hereafter vested in the Director, National Park Service, except with respect to the following:

(1) Authority to approve changes in policies and to establish new policies.

(2) Authority for final approval of Servicewide or Regionwide program and financial plans for construction, professional services, land acquisition, park operations, and other programs.

(3) Authority for final approval of the location of new roads.

(4) Authority to perform the responsibilities set forth in Title I and section 205(a) of Title II of the Historic Preservation Act of October 15, 1966, (80 Stat. 915), as amended, except that the responsibilities of the Director under section 106 of Title I as head of an undertaking agency are hereby delegated.

(5) Authority to initiate investigations of areas suggested or proposed for inclusion in the National Park System and sites under consideration for National Landmark status.

(6) Authority vested in the Secretary of the Interior by the Federal Property and Administrative Services Act of 1949, as amended (40 U.S.C. 484) relating to evaluation of the historical significance of surplus Federal property proposed for demolition or transfer and relating to the plans for restoration, rehabilitation, maintenance, operation, and use of transferred historic monuments.

(7) Authority to execute, amend, assign, and terminate concessions contracts and permits in excess of 5 years

duration or when anticipated annual gross receipts will amount to \$100,000 or more.

(8) Authority to issue general travel authorizations as defined in 347 DM 2.2C.

(9) Authority to approve the payment of actual subsistence expenses for travel.

(10) Authority to approve attendance at meetings of societies and associations.

(11) Authority to approve acceptance of payment of travel, subsistence and other expenses incident to attendance at meetings by an organization which is tax exempt.

(12) Authority to issue rules or regulations for the Government, conduct, and discipline of the U.S. Park Police, as provided under the act of October 11, 1962 (76 Stat. 907).

(13) Authority to make certifications required in connection with reports made to the Secretary on each appropriation or fund under National Park Service control.

(14) Authority to approve Standard Form 1151, Nonexpenditure Transfer Authorization, in connection with internal transfer of funds.

(15) Authority to approve payment of dues for library membership in societies or associations.

(16) Authority to approve rates for quarters and related services.

(17) Authority over those matters for which specific authority is delegated in internal management directives and unpublished delegations of authority arising in the Washington office.

Section 2. Redelegation.—Subject to the following exceptions, the Regional Director, National Capital Region, in writing, redelegate to his officers and employees, the authority delegated in this order and may authorize written redelegations of such authority:

(1) Master plan approval authority may not be redelegated.

(2) In the Regional Office, procurement and contracting authority may be redelegated without limitation to the Associate Regional Director, Administration, and the Chief, Division of Contracting, and not to exceed \$200,000 to other contracting personnel. Authority to contract for supplies, equipment, and services, including construction, may be redelegated by the Regional Director to Superintendents and heads of offices not to exceed \$500,000. Any redelegations of this authority shall be in accordance with the requirements in Federal Procurement Regulation 1-1.404 and Interior Procurement Regulation 14-1.404. The limitations in this subsection (2) of Section 2 apply only to open market or nonmandatory sources of supply. Employees and officers who are otherwise authorized may continue to issue orders to GSA centers and sources under established Federal Supply Schedules or contracts.

(3) Authority to approve land acquisition priorities may not be redelegated. Authority to execute the land acquisition program, including contracting for acquisition of lands and related property,

and options and offers to sell related thereto, may be redelegated only to the Associate Regional Director, Cooperative Activities, National Capital Region, and field land acquisition officers.

(4) Authority to conduct archeological investigations and salvage activities may not be redelegated.

(5) Authority to approve the use of a Government-owned or leased motor vehicle between domicile and place of employment may be redelegated only to the Associate Regional Director, Administration, in the National Capital Region, and may not be redelegated.

Each redelegation shall be published in the FEDERAL REGISTER.

Dated: September 27, 1977.

WILLIAM J. WHALEN,  
Director, National Park Service.

[4310]

[Order 5]

SUPERINTENDENTS, ET AL., NATIONAL  
CAPITAL REGION

Delegation of Authority

Section 1. Superintendents. The National Park Service Superintendents of National Capital Region, whose positions are allocated to Civil Service Grade GS-14 and above, in the administration, operation, and development of the areas under their supervision, are authorized to exercise all of the authority now or hereafter delegated to the Regional Director, National Capital Region, by the Director, National Park Service, except with respect to the following:

(a) Approval of Master Plans.

(b) Acceptance of an offer in settlement of a timber trespass unless (1) the trespass is an innocent one, (2) the damages therefrom do not exceed \$500 and (3) payment of the full amount of the damages is offered.

(c) Authority to execute the land acquisition program, including contracting for acquisition of lands and related property, and options and offers to sell related thereto.

(d) Authority to approve land acquisition priorities.

(e) Authority to approve contracts and purchase orders for supplies, equipment and services in excess of \$10,000.

(f) Authority to conduct archeological investigations and salvage activities.

Section 2. The National Park Service Superintendents of National Capital Region, whose positions are allocated to Civil Service Grades GS-11, GS-12, and GS-13, in the administration, operation, and development of the areas under their supervision, are authorized to exercise all of the authority now or hereafter delegated to the Regional Director, National Capital Region, by the Director, National Park Service, except with respect to the following matters:

(a) Approval of Master Plans.

(b) Acceptance of an offer in settlement of a timber trespass unless (1) the trespass is an innocent one, (2) the dam-

ages therefrom do not exceed \$500 and (3) payment of the full amount of the damages is offered.

(c) Issuance of revocable special use permits having a term of more than 5 years.

(d) Authority to execute the land acquisition program, including contracting for acquisition of lands and related property, and options and offers to sell related thereto.

(e) Authority to approve land acquisition priorities.

(f) Authority to approve contracts and purchase orders for supplies, equipment and services in excess of \$10,000.

(g) Authority to conduct archeological investigations and salvage activities.

Section 3. Associate Regional Directors, and the Chief, Division of Programming and Budget, may exercise all the authority of the Regional Director, National Capital Region, with respect to any matter which may come before them, except the authority to approve master plans and the authority to conduct archeological investigations and salvage activities.

Section 4. Chief, Division of Contracting. The Chief, Division of Contracting, National Capital Region, may execute, administer, and approve all contracts for construction, supplies, equipment, and services, except contracts for acquisition of lands and related property and options related thereto. This procurement and contracting authority may be exercised on behalf of any office or area for which National Capital Region serves as the field finance office.

Section 5. Associate Regional Director, Cooperative Activities. The Associate Regional Director, Cooperative Activities, is authorized to exercise the following authority as to land acquisition funded by Land and Water Conservation funds:

(a) Approval and acceptance of options and offers to sell to, or exchange with the United States, lands or interests in lands within areas under the jurisdiction and control of National Capital Region, National Park Service, and to execute all necessary agreements and conveyances incident thereto.

(b) Acceptance of deeds conveying to the United States lands, or interests in lands, under the jurisdiction and control of the Regional Director, National Capital Region, National Park Service.

(c) Approve on behalf of the National Park Service offers of settlement in condemnation cases. Approvals of offers of settlement by him will be communicated to the appropriate office of the Solicitor's Office of the Department of the Interior for such further action as may be proper.

Section 6. Field Land Acquisition Officers. Field Land Acquisition Officers are authorized to exercise authority, on assigned projects, with respect to the following:

(a) Approval and acceptance of options and offers to sell to or exchange with the United States, lands or interests in lands, within areas under the jurisdiction of the National Park Service within

their respective areas, and to execute all necessary agreements and conveyances incident thereto when the amount involved does not exceed \$100,000.

(b) Acceptance of deeds conveying to the United States lands, or interests in lands, within their respective areas.

Section 7. Redlegation. Superintendents may, in writing, redelegate to any officer or employee the authority delegated to him by this order. Each redelegation shall be published in the FEDERAL REGISTER.

Section 8. Revocation. This order supersedes National Capital Region Order No. 3, as amended; however, redelegations based thereon are continued in effect to the extent that they are not in conflict with this order. (National Park Service Order 68 (36 FR 13802), dated July 24, 1971, as amended.)

Dated: September 14, 1977.

##### Office of the Secretary PRIVACY ACT OF 1974 New System of Records

SEPTEMBER 22, 1977.

Pursuant to the provisions of the Privacy Act of 1974, Pub. L. 93-579, 5 U.S.C. 552a, the Department of the Interior publishes for comment a new system of records.

The Department of the Interior invites public comments concerning the proposed new system of records. Any person interested in commenting may do so by submitting comments in writing to Wayne D. Garrett, Office of Aircraft Services, 3905 Vista Avenue, Boise, Idaho 83705. Comments must be submitted on or before November 3, 1977. The system will become effective within 30 days (November 3, 1977), as proposed without further notice unless comments are received which result in a contrary determination.

RICHARD R. HITE,  
Deputy Assistant Secretary  
of the Interior.

#### INTERIOR/AAS-97

##### System name:

Pilot Flight Time Report—Interior, Office of the Secretary.

##### System location:

(1) National Headquarters, Office of Aircraft Services, Division of Technical Services, 3905 Vista Avenue, Boise, Idaho 83705. (2) Regional Office—Regional Director, Office of Aircraft Services, 4343 Aircraft Drive, Anchorage, Alaska 99503.

##### Categories of individuals covered by the system:

Professional, dual-function and incidental pilots employed by Interior Bureaus, Offices.

##### Categories of records in the system:

The system contains information relative to certificates, qualifications, experience levels, currency and proficiency.

##### Authority for maintenance of the system:

5 USC 301, Reorganization Plan 3 of 1950.

##### Routine uses of records maintained in the system, including categories of uses and the purposes of such uses:

The primary use of the record is to determine pilot qualifications and to monitor compliance with OAS directives and Federal Aviation Regulations. Disclosure outside the Department of the Interior may be made, (1) to the U.S. Department of Justice when related to litigation or anticipated litigation, (2) of information indicating a violation or potential violation of a statute, regulation, rule, order or license, to appropriate Federal, State, local or foreign agencies responsible for investigating or prosecuting the violation or for enforcing or implementing the statute, rule, regulation, order or license, (3) to a Federal agency which has requested information relevant or necessary to its hiring or retention of an employee, or issuance of a security clearance, license, pilot qualification card, grant or other benefit, (4) to Federal, State, local agencies or commercial business where necessary to obtain information relevant to the hiring or retention of an employee, or the issuance of a security clearance, license, pilot qualification card, grant or other benefit.

##### Policies and practices for storing, retrieving, accessing, retaining and disposing of records in the system:

##### Storage:

Manual and automated.

##### Retrievability:

Indexed Social Security Account Number, Name, Agency and Location.

##### Safeguards:

Access to and use of these records are limited to those persons whose official duties require such access.

##### Retention and Disposal:

According to approved records disposal schedules.

##### System manager(s) and address:

(1) *National Headquarters*—Chief, Technical Services Division, Office of Aircraft Services, 3905 Vista Avenue, Boise, Idaho 83705. (2) *Regional Office*—Regional Director, Office of Aircraft Services, 4343 Aircraft Drive, Anchorage, Alaska 99503.

##### Notification procedure:

Inquiries regarding the existence of records shall be addressed to the appropriate System Manager. A written, signed request stating that the requester seeks information concerning records pertaining to him is required. See 43 CFR 2.60.

##### Record access procedures:

A request for access shall be addressed to the appropriate System Manager. The request must be in writing and be signed by the requester. The request must meet the content requirements of 43 CFR 2.63.

##### Contesting record procedures:

A petition for amendment shall be addressed to the appropriate System Manager and must meet the content requirements of 43 CFR 2.71.

##### Record source categories:

Information in this system comes from the individual to whom it applies and from OAS records.

[FR Doc. 77-28808 Filed 9-29-77 8:45 am]

#### [ 4310-10 ]

##### PRIVACY ACT OF 1974 New Systems Notices

SEPTEMBER 22, 1977.

The Department of the Interior by this notice announces the creation of two new systems or records. These systems are essential for assistance of users of water data supplied by the Water Resources Division, Geological Survey. The systems included with this notice are:

a. Interior/EGS-25; Water Data Sources Directory

b. Interior/EGS-26; National Water Data Exchange Users Accounting System

Comments and suggested changes should be addressed to the Privacy Act Officer, Department of the Interior, Washington, D.C. 20240, by November 3, 1977, after which date these systems become effective as published.

RICHARD R. HITE,  
Deputy Assistant  
Secretary of the Interior.

#### INTERIOR/EGS-25

##### System name:

Water Data Sources Directory.

##### System location:

National Water Data Exchange, Water Resources Division, U.S. Geological Survey, Reston, Virginia 22092.

##### Categories of individuals covered by the system:

Individuals who are sources of water or water-related data and to whom requesters can be referred to obtain water data held by them.

##### Categories of records in the system:

Contains name, address and telephone number of individuals who are sources of water or water-related data.

##### Authority for maintenance of the system:

The Water Data Sources Directory is maintained under the authority of 43 U.S.C. 31 (28 Stat. 398), OMB Cir. A-67, and 5 U.S.C. 301.

##### Routine uses of records maintained in the system, including categories of uses and the purposes of such uses:

Referenced by (1) Geological Survey and Geological Survey contractor personnel in processing requests for water or water-related data, (2) Personnel of Local Assistance Centers listed in Appendix A of the National Water Data Exchange (NAWDEX) including Geological Survey personnel and personnel of state-governmental, local-governmental, other public, and private organizations serving as NAWDEX Local Assistance Centers in processing requests for water or water-related data, and (3) Users of NAWDEX including Federal, state-governmental, local-governmental, other public, and private organizations and private citizens in identifying sources of water and water-related data and transmitting requests for the acquisition of desired data. (4) Transfer to the U.S. Department of Justice in the event of litigation or potential litigation involving the records or the subject matter of the records. (5) Transfer, in the event there is indicated a violation or potential violation of a statute, regulation, rule, order or license, whether civil, criminal or regulatory in nature, to the appropriate agency or agencies, whether federal, state, local or foreign, charged with the responsibility of investigation or prosecuting such violation or charged with enforcing or implementing the statute, rule, regulation, order or license violated or potentially violated.

##### Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Maintained in computerized form on punch cards, magnetic disks or magnetic tape, printed lists, and a published directory available for public dissemination.

##### Storage:

Maintained in computerized form on punch cards, magnetic disks or magnetic tape, printed lists, and a published directory available for public dissemination.

##### Retrievability:

Retrievable by name, a unique identifier, geographical identifiers, and types of data available from the individual.

##### Safeguards:

Computer files are password protected to prevent unauthorized use, and all entry of information is made by Geological Survey personnel of the NAWDEX Program Office only.

##### Retention and disposal:

Records retained indefinitely unless cancelled by a reported individual.

##### System manager and address:

Program Manager, National Water Data Exchange, U.S. Geological Survey, 421 National Center, Reston, Virginia 22092.

##### Notification procedure:

Any individual may inquire about information stored on themselves by submitting a written request to the System Manager. See 43 CFR 2.60.

##### Record access procedures:

Requests for access should be in writing and addressed to the System Manager. See 43 CFR 2.63.

##### Contesting record procedures:

A petition for amendment must be addressed to the System Manager and must meet the content requirements of 43 CFR 2.71.

##### Record source categories:

Information stored may be obtained from the individual on whom the record is maintained, organizations, or other individuals, with whom the individual identified in the record is associated, NAWDEX personnel, and NAWDEX-contracted information researchers.

#### INTERIOR/EGS-26

##### System name:

National Water Data Exchange User Accounting System.

##### System location:

(1) National Water Data Exchange, NAWDEX Water Resources Division, U.S. Geological Survey, Reston, Virginia 22092.

(2) NAWDEX Local Assistance Centers listed in Appendix A.

##### Categories of individuals covered by the system:

Individuals who have requested water data from or to whom information has been sent by the National Water Data Exchange and its Local Assistance Centers.

##### Categories of records in the system:

Contains name, address, and telephone number, types of data requested, type of response made, types and volumes of data provided and appropriate cost accounting procedures.

##### Authority for maintenance of the system:

The User Accounting System is maintained under authority of 43 U.S.C. 31 (Stat. 398), OMB Cir. A-67, and 5 U.S.C. 301.

##### Routine uses of records maintained in the system, including categories of uses and purposes of such uses:

(1) By Geological Survey and Geological Survey contractor personnel in processing user requests for data, (2) By personnel of Local Assistance Centers of the National Water Data Exchange (NAWDEX) including Geological Survey personnel and personnel of state-governmental, local-governmental, other public, and private organizations serving as NAWDEX Local Assistance Centers in processing user requests for data, (3) By the personnel in (1) and (2) above for verification of responses referred to other organizations for data acquisition, program planning and accounting, cost effectiveness computations, and follow-up on quality of service provided. (4) Transfer to the U.S. Department of Justice in the event of litigation or potential litigation involving the records or the subject matter of the records. (5) Transfer, in the event there is indicated a violation or potential violation of a statute, regulation, rule, order or license, whether civil, criminal or regulatory in nature, to the appropriate agency or agencies, whether federal, state, local or foreign, charged with the responsibility of investigation or prosecuting such violation or charged with enforcing or implementing the statute, rule, regulation, order or license violated or potentially violated.

mental, local-governmental, other public, and private organizations serving as NAWDEX Local Assistance Centers in processing user requests for data, (3) By the personnel in (1) and (2) above for verification of responses referred to other organizations for data acquisition, program planning and accounting, cost effectiveness computations, and follow-up on quality of service provided. (4) Transfer to the U.S. Department of Justice in the event of litigation or potential litigation involving the records or the subject matter of the records. (5) Transfer, in the event there is indicated a violation or potential violation of a statute, regulation, rule, order or license, whether civil, criminal or regulatory in nature, to the appropriate agency or agencies, whether federal, state, local or foreign, charged with the responsibility of investigation or prosecuting such violation or charged with enforcing or implementing the statute, rule, regulation, order or license violated or potentially violated.

##### Policies and practice for storing, retrieving, accessing, retaining, and disposing of records in the system:

##### Storage:

Maintained in manual form in file folders and on magnetic computer storage devices.

##### Retrievability:

Indexed by geographic location or requester and cross-indexed by name of requester, in chronological order, and by request record number.

##### Safeguards:

Maintained in areas occupied by NAWDEX personnel during working hours with building locked and/or guarded during off-duty hours. Computer files are password protected to restrict unauthorized use.

##### Disposal:

Original hard copy destroyed after a period not to exceed two years. Computerized file copy destroyed after a period not to exceed three years. All records may be retained longer, with permission of subject individual requester transactions.

##### System manager and address:

Program Manager, National Water Data Exchange (NAWDEX), U.S. Geological Survey, 421 National Center, Reston, Virginia 22092.

##### Notification procedure:

Systems manager or manager of installation which is believed to have the request record. Installation will only provide information on records held locally. A written and signed request stating that the requester seeks information concerning records pertaining to himself or herself is required. See 43 CFR 2.60.

##### Record access procedure:

Same as above. See 43 CFR 2.63.

**INTERNATIONAL TRADE COMMISSION****PRIVACY ACT OF 1974****Modification of Existing System of Records for Employment and Financial Disclosure Records**

**AGENCY:** United States International Trade Commission.

**ACTION:** Modification of System of Records Notice under the Privacy Act of 1974.

**SUMMARY:** This modification of the system of records for employment and financial disclosure records increases and changes the number and types of individuals on whom the records in this system are maintained. The categories of individual GS employees required to submit confidential statements of employment and financial interests is being changed from "all current employees of the U.S.I.T.C. at grade 15 and above and all GS-14's employed by the U.S.I.T.C. who are in supervisory positions" to all current employees of the U.S.I.T.C. at grade 13 and above and certain U.S.I.T.C. employees below GS-13. In addition, provision is being made for voluntary submission of confidential statements of employment and financial interests by employees not required to file such statements.

**FOR FURTHER INFORMATION CONTACT:**

Rhond R. Roth, Esq., Office of the General Counsel, U.S. International Trade Commission, Washington, D.C. 20436, telephone 202-523-0480.

**SUPPLEMENTARY INFORMATION:**  
**The United States International Trade**

Commission is taking these actions to modify its existing system of records containing the employment and financial disclosure records of certain identifiable individual Commission employees in accordance with 5 U.S.C. 552a(e)(4) and in conformity with Office of Management and Budget Circular A-108, Transmittal Memorandum No. 1, issued September 30, 1975 (See 40 FR 28949-28978 (1975)). The Commission established its system of records for employment and financial disclosure records by notice published in the *FEDERAL REGISTER* on September 9, 1975 (40 FR 41981-41983 (1975)) and provided a 30-day period for public comment on the "routine uses" of the system of records, as required by 5 U.S.C. 552a(e)(11), at that time. No new "routine uses" are being proposed by this modification of the system of records; accordingly, no additional 30-day period for public comment on "routine uses" is being provided at this time.

Pursuant to 5 U.S.C. 552a(o) and in conformity with 11 2.a.(2)(a) and 2.e. of Office of Management and Budget Circular A-108, Transmittal Memorandum No. 1, the Commission provided a minimum advance notice of 60 days to the Office of Management and Budget prior to the issuance of any data collection forms and instructions to Commission employees with respect to this system of records, as modified, in order to permit an evaluation of the probable or potential effect of such proposal on the privacy and other personal or property rights of individuals or the disclosure of information relating to such individuals, and its effect on the preservation of the constitutional principles of federalism and separation of powers (5 U.S.C. 552a(o)). In addition, a like advance notice period was also provided by the Commission to the Congress (through the Speaker of the House and the President of the Senate), as required by 5 U.S.C. 552a(o), and to the Privacy Protection Study Commission. This system of records, as modified, will be effective. The system of records for employment and financial disclosure records, as modified, is set forth as follows:

**Employment and Financial Disclosure Records—U.S.I.T.C.****Location:**

Deputy Counselor for Employee Responsibilities and Conduct (Assistant to the General Counsel), Office of the General Counsel, United States International Trade Commission, 701 E Street NW., Washington, D.C. 20436

**Category of individual:**

1. **GS Employees:** All current employees of the U.S.I.T.C. at grade 13 and above, or at a comparable pay level under other authority, and U.S.I.T.C. employees below GS-13, or at a comparable pay level under other authority, who are (1) responsible for making a decision or taking an action in regard to Commission contracting or procurement, (2) responsible for conducting investigative and research activities where the

decision to be made or action to be taken could have an impact on any non-Federal enterprise, or (3) responsible for exercising the authority of any supervisory employee in the absence of such employee. Certain Commission employees within this class may not be required to file confidential statements of employment and financial disclosure if a determination is made pursuant to 19 C.F.R. 200.735-114a that (1) the duties of the position are such that the likelihood of the incumbent's involvement in a conflict-of-interest situation is remote, or (2) that the duties of a position are at such a level of responsibility that the submission of a statement of employment and financial interests is not necessary because of the degree of supervision and review over the incumbent or the inconsequential effect on the integrity of the Government. In addition, U.S.I.T.C. employees not required to file confidential statements of employment and financial interests, but who wish to voluntarily file such statements, are included.

2. **Special Employees:** All special employees of the U.S.I.T.C. file a Confidential Statement of Employment and Financial Interests for Special Government employees. "Special Government Employee" is defined at 18 U.S.C. 202 and includes, but is not limited to, experts, consultants and advisors hired for temporary duties either on a full-time or intermittent basis.

**Category of record:**

1. **GS Employees:** This system of records consists of a confidential statement of employment and financial interests. Employees of the U.S.I.T.C. required to file this statement must list the names of all corporations, companies, firms, or other business enterprises, partnerships, non-profit organizations, and educational or other institutions: (a) With which the employee is connected as an employee, officer, owner, director, member, trustee, partner, adviser, or consultant; or (b) in which the employee has any continuing financial interests, through a pension or retirement plan, shared income, or other arrangement as a result of any current or prior employment or business or professional association; or (c) in which the employee has any financial interest through the ownership of stock, stock options, bonds, securities, or other arrangements including trusts.

An employee of the U.S.I.T.C. required to file this statement must also list the names of his creditors other than those to whom he may be indebted by reason of a mortgage on property which he occupies as a personal residence or to whom he may be indebted for current and ordinary household and living expenses such as household furnishings, automobiles, education, vacation and similar expenses.

Further, the U.S.I.T.C. employee required to file such a statement must list his interest in real property or rights in lands, other than property which he occupies as a personal residence. If any of

the above information is to be supplied by other persons, e.g., trustee, attorney, accountant, relative, the employee must also list the names and addresses of such persons, the date upon which the employee requested that the information be supplied, and the nature of the subject matter involved.

2. **Special Employees:** This system of records consists of a confidential statement of employment and financial interests for special employees. The special employee must disclose all other federal agencies and other organizational segments of the U.S.I.T.C. in which he is presently employed. He must also name all corporations, companies, firms, State or local Governmental organizations, research organizations, and educational or other institutions in which he is serving as employee, officer, member, owner, trustee, director, expert, adviser, or consultant, with or without compensation.

The Special Employee must also disclose his financial interests by listing the names of all corporations, companies, firms, or other business enterprises, partnerships, non-profit organizations, and educational or other institutions in which he has any financial interest in any amount through the ownership of stock, stock options, bonds, securities, or other arrangements including trusts.

**Authority:**

1. The Confidential Statement of Employment and Financial Interests for GS-employees is required by section 402 of Executive Order 11222, dated May 8, 1965, prescribing standards of ethical conduct for Government officers and employees.

2. The confidential statement of employment and financial interest for special Government employees is required by section 308 of Executive Order 11222.

**Routine uses:**

These records and information in these records may be used:

a. By the Deputy Counselor for Employee Responsibilities and Conduct to determine whether or not an employee has a direct or indirect financial interest which conflicts substantially, or appears to conflict substantially, with his U.S.I.T.C. duties or responsibilities.

b. By the Deputy Counselor to determine whether a U.S.I.T.C. employee has engaged in, directly or indirectly, a financial transaction as a result of, or primarily relying on, information obtained through U.S.I.T.C. employment.

c. For review by the Deputy Counselor. The Deputy Counselor is responsible for maintaining these records in confidence and may not disclose information from these records to other persons or agencies except as the Civil Service Commission or the Chairman of the U.S.I.T.C. may determine for good cause shown.

**Records management policy and practice:****Storage:**

These records are maintained in folders.

**Retrievability:**

These records are indexed by the names of the individuals on whom they are maintained.

**Safeguards:**

These records are kept in a locked filing cabinet in the office of the Deputy Counselor for Employee Responsibilities and Conduct (Assistant General Counsel), who is normally the only official with authorized access to them. However, the Statements of Employment and Financial Interest of the Deputy Counselor (Assistant General Counsel) and of his immediate superior (the General Counsel) are submitted directly to the Counselor for Employee Responsibilities and Conduct (one of the U.S.I.T.C. commissioners).

**Retention and disposal:**

These records are maintained by the Deputy Counselor while the employee is at the U.S.I.T.C. and for 5 years after the employee has left the U.S.I.T.C. Thereupon these records are destroyed.

**System manager:**

Deputy Counselor for Employee Responsibilities and Conduct (Assistant General Counsel), Office of the General Counsel, United States International Trade Commission, 701 E Street, NW., Washington, D.C. 20436.

**Notification:**

Director, Personnel Division (Same address as above).

**Access and contest:**

Director, Personnel Division (Same address as above).

**Sources:**

Information in this system is supplied by the individuals to whom the records pertain.

**By order of the Commission:**

Issued: September 26, 1977.

KENNETH R. MASON,  
Secretary.

**DEPARTMENT OF JUSTICE****UNITED STATES v. CITY OF DETROIT****Proposed Consent Decree in Action To Enjoin Discharge of Water Pollutants**

In accordance with Departmental Policy, 28 CFR 50.7, 38 F.R. 19020, a notice is hereby given that on September 14, 1977, a consent decree in *United States v. City of Detroit*, was filed with the United States District Court for the Eastern District of Michigan. The consent decree was entered on September 14, 1977, by the Court and requires the City of Detroit to construct new sewage treatment facilities to meet secondary treatment standards by December 1, 1980, and phosphorus treatment standards by

December 31, 1981. If comments from the public warrant a change in the consent decree, the United States will take the necessary steps to request modification of the decree.

The Department of Justice will receive until October 31, 1977 written comments relating to the judgment. Comments should be addressed to the Assistant Attorney General for the Land and Natural Resources Division, Department of Justice, Washington, D.C. 20530, and refer to *United States v. City of Detroit*, E.D. Mich., D.J. Ref. 90-5-1-1-764.

The consent decree may be examined at the office of the United States Attorney, Eastern District of Michigan, United States Courthouse, Detroit, Michigan; the Clerk of the District Court, Eastern District of Michigan, United States Courthouse, Detroit, Michigan; and the Pollution Control Section, Land and Natural Resources Division, Department of Justice, Room 2625, Department of Justice Building, Ninth Street and Pennsylvania Avenue NW., Washington, D.C. A copy of the consent decree may be obtained in person or by mail from the Pollution Control Section.

JAMES W. MOORMAN,  
Acting Assistant Attorney General,  
Land and Natural Resources Division.

**DEPARTMENT OF LABOR****Office of the Secretary**

[TA-W-2027]

**AETNA-STANDARD ENGINEERING CO., ELLWOOD CITY, PA.****Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance**

In accordance with section 223 of the Trade Act of 1974 the Department of Labor herein presents the results of TA-W-2027: Investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in section 222 of the Act.

The investigation was initiated on April 26, 1977, in response to a worker petition received on April 25, 1977, which was filed by the United Steelworkers of America on behalf of workers and former workers producing rolling mill machinery at the Aetna-Standard Engineering Co., Ellwood City, Pa.

The Notice of Investigation was published in the *FEDERAL REGISTER* on May 10, 1977 (42 FR 23655). No public hearing was requested and none was held.

The information upon which the determination was made was obtained principally from officials of the Aetna-Standard Engineering Co., the U.S. Department of Commerce, the U.S. International Trade Commission, industry analysts and Department files.

In order to make an affirmative determination and issue a certification of

eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Trade Act of 1974 must be met:

(1) That a significant number or proportion of the workers in the workers' firm, or an appropriate subdivision thereof, have become totally or partially separated, or are threatened to become totally or partially separated;

(2) That sales or production, or both, of such firm or subdivision have decreased absolutely;

(3) That articles like or directly competitive with those produced by the firm or subdivision are being imported in increased quantities, either actual or relative to domestic production; and

(4) That such increased imports have contributed importantly to the separations, or threat thereof, and to the decrease in sales or production. The term "contributed importantly" means a cause which is important but not necessarily more important than any other cause.

Without regard to whether any of the other criteria have been met, criterion (4) has not been met.

The Aetna-Standard Engineering Co. manufactures durable capital equipment for rolling mills in the steel industry. The rolling mill equipment consists of heavy-duty machinery produced according to customer specifications. Domestic demand for rolling mill machinery is largely dependent on capital investment by the steel industry.

Annual sales by Aetna-Standard are characterized by wide fluctuations because of the industry-wide practice of competitive bidding on major contracts. Approximately half of Aetna-Standard's sales are exports. A review of a list of the domestic contracts on which Aetna-Standard had unsuccessfully bid in 1976 revealed that the contracts were awarded to other domestic producers of rolling mill machinery.

#### CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that imports of articles like or directly competitive with rolling mill machinery produced by the Aetna-Standard Engineering Co., Ellwood City, Pa., did not contribute importantly to the total or partial separations of the workers at that firm.

Signed at Washington, D.C., this 12th day of September 1977.

JAMES F. TAYLOR,  
Director, Office of Management,  
Administration, and Planning.

#### [4510-23]

[TA-W-1774]

#### BUNKER RAMO CORP. INSTRUMENTS DIVISION, JANESVILLE, WIS.

#### Determinations Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 the Department of

Labor herein presents the results of TA-W-1774: Investigation regarding certification of eligibility to apply for adjustment assistance as prescribed in section 222 of the Act.

The investigation was initiated on March 8, 1977, in response to a worker petition received on March 7, 1977, which was filed by the International Association of Machinists and Aerospace Workers on behalf of workers and former workers producing potentiometers, transducers, counting dials and trimmers at the Janesville, Wis. plant of Bunker Ramo Corp., Instruments Division.

The Notice of Investigation was published in the FEDERAL REGISTER on March 22, 1977 (42 FR 15477). No public hearing was requested and none was held.

The information upon which the determination was made was obtained from officials of Bunker Ramo Corp., its customers, the U.S. Department of Commerce, the U.S. International Trade Commission, industry analysts, and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Trade Act of 1974 must be met:

(1) That a significant number or proportion of the workers in the workers' firm, or an appropriate subdivision thereof, have become totally or partially separated, or are threatened to become totally or partially separated;

(2) That sales or production, or both, of such firm or subdivision have decreased absolutely;

(3) That articles like or directly competitive with those produced by the firm or subdivision are being imported in increased quantities, either actual or relative to domestic production; and

(4) That such increased imports have contributed importantly to the separations, or threat thereof, and to the decrease in sales or production. The term "contributed importantly" means a cause which is important but not necessarily more important than any other cause.

The investigation has revealed that all four of the above criteria have been met with respect to workers producing counting dials. Without regard to whether any other criteria has been met, criterion (4) has not been met with respect to workers producing potentiometers, transducers and trimmers.

#### A. COUNTING DIALS

#### SIGNIFICANT TOTAL OR PARTIAL SEPARATIONS

Total employment at the Janesville plant declined 18 percent in 1976 compared to 1975, and declined 27 percent in the first quarter of 1977 compared to the like period one year earlier. Officials of Bunker Ramo announced the closing of the Janesville plant on June 1, 1977. All production workers were laid off by the third week of July 1977.

#### SALES OR PRODUCTION, OR BOTH, HAVE DECREASED ABSOLUTELY

Sales and production was combined for all products produced at the Instrument Division of the Janesville plant.

Production of all variable resistors at the Janesville plant declined 2 percent in constant dollars in 1976 from 1975 and declined 21 percent in the first quarter of 1977 compared to the like quarter in 1976.

#### INCREASED IMPORTS

Imports of variable resistors increased from 257,103 thousand units in 1972 to 295,351 thousand units in 1973 and to 338,470 thousand units in 1974. Imports declined to 192,120 thousand units in 1975, then increased to 534,401 thousand units in 1976. The ratio of imports to domestic production declined in each year from 65.8 percent in 1972 to 34.6 percent in 1975, then increased to 91.6 percent in 1976.

#### CONTRIBUTED IMPORTANTLY

The Instruments Division imported counting dials. These company imports decreased 44 percent in quantity in 1976 from 1975 and increased 45 percent in the first quarter of 1977 compared to the first quarter of 1976. The counting dials that were imported were competitive with those produced at the Janesville plant.

#### B. POTENTIOMETERS, TRANSDUCERS AND TRIMMERS

The Department contacted some customers of the Instruments Division. The overwhelming majority of customers that responded to the Department's questionnaire indicated that they purchased no imported potentiometers, transducers, or trimmers. Most of these customers stated that they knew of no import influence in Bunker Ramo's market. Only two customers accounting for 0.2 percent of the Division's annual sales purchased any imported electronic components.

#### CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that increases of imports of articles like or directly competitive with counting dials produced at the Instruments Division of Bunker Ramo Corp., Janesville, Wis., contributed importantly to the total or partial separations of workers at that plant. In accordance with the provisions of the Act, I make the following certification:

All workers of the Janesville, Wis., plant of Bunker Ramo Corp., Instruments Division, engaged in employment related to the production of counting dials who became totally or partially separated from employment on or after February 22, 1976, are eligible to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

I further conclude that increases of imports of articles like or directly competitive with potentiometers, transducers, and trimmers produced at the Janesville, Wis., plant of Bunker Ramo Corp.,

Instruments Division have not contributed importantly to the total or partial separation of workers at that plant as required for certification under the Trade Act of 1974.

Signed at Washington, D.C., this 19th day of September 1977.

JAMES F. TAYLOR,  
Director, Office of Management,  
Administration, and Planning.

[FR Doc.77-28876 Filed 9-29-77;8:45 am]

#### [4510-23]

[TA-W-1508]

#### CASCADE STEEL ROLLING MILLS, INC., McMinnville, OREG.

#### Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 the Department of Labor herein presents the results of TA-W-1508: Investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in section 222 of the Act.

The investigation was initiated on December 23, 1976, in response to a worker petition received on December 22, 1976, which was filed by the United Steelworkers of America on behalf of workers and former workers producing concrete reinforcing bars (rebars) at the McMinnville, Oreg., plant of Cascade Steel Rolling Mills, Inc.

The notice of investigation was published in the FEDERAL REGISTER on January 11, 1977 (42 FR 2371). No public hearing was requested and none was held.

The information upon which the determination was made was obtained principally from officials of Cascade Steel Rolling Mills, Inc., its customers, the U.S. Department of Commerce, the U.S. International Trade Commission, industry analysts, and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Trade Act of 1974 must be met:

(1) That a significant number or proportion of the workers in such workers' firm, or an appropriate subdivision thereof, have become totally or partially separated, or are threatened to become totally or partially separated;

(2) That sales or production, or both, of such firm or subdivision have decreased absolutely;

(3) That articles like or directly competitive with those produced by the firm or subdivision are being imported in increased quantities, either actual or relative to domestic production; and

(4) That increased imports have contributed importantly to the separations, or threat thereof, and to the decrease in sales or production. The term "contributed importantly" means a cause which is important but not necessarily more important than any other cause.

Without regard to whether any of the other criteria have been met, criterion (4) has not been met.

All of the customers of rebars of Cascade Steel Rolling Mills who were surveyed by the Department reported that they do not buy imported rebars and/or that they increased purchases from Cascade. Some of the respondents who reduced purchases reported that the reduction was caused by the depressed construction industry. Rebars are used exclusively in reinforced concrete construction.

The response of customers is consistent with industry trends. U.S. shipments of rebars increased 5.8 percent to 3,870,400 tons in 1976. Total construction, in constant dollars, fell by 13.0 percent between 1974 and 1975 while nonresidential construction, the primary consumer of rebars, fell by 17.1 percent in the same time period.

#### CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that increased imports of articles like or directly competitive with the concrete reinforcing bars produced at the McMinnville, Oreg. plant of Cascade Steel Rolling Mills, Inc., have not contributed importantly to the total or partial separation of workers at the plant as required for certification under section 222 of the Trade Act of 1974.

Signed at Washington, D.C., this 22d day of September 1977.

HARRY GRUBERT,  
Director, Office of  
Foreign Economic Research.

[FR Doc.77-28877 Filed 9-29-77;8:45 am]

#### [4510-23]

[TA-W-1969]

#### CENTRAL SLIPPER COMPANY, INC., WILKES-BARRE, PENNSYLVANIA

#### Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974 the Department of Labor herein presents the results of TA-W-1969: Investigation regarding certification of eligibility to apply for adjustment assistance as prescribed in Section 222 of the Act.

The investigation was initiated on April 11, 1977 in response to a worker petition received on April 6, 1977 which was filed by the United Shoe Workers of America on behalf of workers and former workers producing sneakers at the Wilkes-Barre, Pa. plant of the Central Slipper Company, Inc.

The Notice of Investigation was published in the FEDERAL REGISTER on April 29, 1977 (42 FR 21872). No public hearing was requested and none was held.

The information upon which the determination was made was obtained principally from officials of Central Slipper Co., Inc., its customers, the Depart-

ment of Commerce, the U.S. International Trade Commission, industry analysts and Department files.

On December 9, 1976, the Department issued a Notice of Determination for the Wilkes-Barre, Pa. plant of Central Slipper Co., Inc. All workers in the soft-soled division were certified beginning August 25, 1975. All workers in the hard-soled division (sneakers) were denied based on increases in employment (TA-W-1053). This investigation is therefore limited to the hard-soled division.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of Section 222 of the Trade Act of 1974 must be met:

(1) That a significant number or proportion of the workers in such workers' firm, or an appropriate subdivision thereof, have become totally or partially separated, or are threatened to become totally or partially separated;

(2) That sales or production, or both, of such firm or subdivision have decreased absolutely;

(3) That articles like or directly competitive with those produced by the firm or subdivision are being imported in increased quantities, either actual or relative to domestic production; and

(4) That such increased imports have contributed importantly to the separations, or threat thereof, and to the decrease in sales or production. The term "contributed importantly" means a cause which is important but not necessarily more important than any other cause.

The investigation has revealed that all of the above criteria have now been met for the hard-soled division of the plant.

#### SIGNIFICANT TOTAL OR PARTIAL SEPARATIONS

The average number of production workers in the hard-soled division of the plant declined 29 percent from 1973 to 1974, declined 3 percent from 1974 to 1975, and then increased 3 percent from 1975 to 1976. Employment declined 48 percent in the first five months of 1977 compared to the same period of 1976. There have been steady employment declines in the hard-soled division since May, 1976. Plant-wide layoffs occurred for one week in June, 1976, two weeks in September, 1976, one week in October, 1976 and one week in December, 1976. Lay-offs occurred in April, 1977, and the entire plant was shut down for one week in May 1977.

#### SALES OR PRODUCTION, OR BOTH, HAVE DECREASED ABSOLUTELY

Sales of sneakers declined 33 percent in quantity from 1973 to 1974 and declined 5 percent from 1974 to 1975. The quantity of sales increased 12 percent from 1975 to 1976 and then declined 18 percent in the first four months of 1977 compared to the same period of 1976. Sales quantities declined 39 percent in the second quarter of 1976 compared to the first quarter of that year, and declined 31 percent in the third quarter of

1976 when compared to the second quarter of the same year.

#### INCREASED IMPORTS

Imports of rubber/canvas footwear increased absolutely each year from 1972 to 1974, declined from 1974 to 1975 and then increased 35 percent from 1975 to 1976. Imports increased 62 percent in the first quarter of 1977 compared to the first quarter of 1976. The ratio of imports to domestic production increased from 16.6 percent in the first quarter of 1976 to 34.1 percent in the first quarter of 1977.

#### CONTRIBUTED IMPORTANTLY

Retail customers accounting for approximately forty percent of Central Slipper's sales reduced their purchases of sneakers from that company and increased their import purchases from 1975 to 1976.

#### CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that increases of imports like or directly competitive with sneakers produced in the hard-soled division of the Wilkes-Barre, Pa. plant of the Central Slipper Co., Inc. contributed importantly to the total or partial separation of the workers of that plant. In accordance with the provisions of the Act, I make the following certification:

All workers engaged in employment related to the production of sneakers in the hard-soled production division of the Wilkes-Barre, Pennsylvania plant of the Central Slipper Co., Inc. who became totally or partially separated from employment on or after April 4, 1976 are eligible to apply for adjustment assistance under Title II, Chapter 2, of the Trade Act of 1974.

Signed at Washington, D.C., this 20th day of September 1977.

HARRY GRUBERT,  
Director, Office of  
Foreign Economic Research.

[FR Doc 77-28879 Filed 9-20-77; 8:45 am]

[4510-23]

[TA-W-1431]

#### CLAIRTON WORKS, U.S. STEEL CORP., CLAIRTON, PENNSYLVANIA

#### Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974 the Department of Labor herein presents the results of TA-W-1431: Investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in Section 222 of the Act.

The investigation was initiated on December 15, 1976 in response to a worker petition received on December 15, 1976 which was filed by the United Steelworkers of America on behalf of workers and former workers producing carbon steel structural shapes at the Clairton Works of the U.S. Steel Corporation, Clairton, Pennsylvania.

The Notice of Investigation was published in the FEDERAL REGISTER on January 7, 1977 (42 FR 1539). No public hearing was requested and none was held.

The information upon which the determination was made was obtained principally from officials of the U.S. Steel Corporation, its customers, the U.S. Department of Commerce, the U.S. International Trade Commission, industry analysts, and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of Section 222 of the Trade Act of 1974 must be met:

(1) That a significant number or proportion of the workers in the workers' firm, or an appropriate subdivision thereof, have become totally or partially separated, or are threatened to become totally or partially separated.

(2) That sales or production, or both, of such firm or subdivision have decreased absolutely;

(3) That articles like or directly competitive with those produced by the firm or subdivision are being imported in increased quantities, either actual or relative to domestic production; and

(4) That such increased imports have contributed importantly to the separations, or threat thereof, and to the decrease in sales or production. The term "contributed importantly" means a cause which is important but not necessarily more important than any other cause.

The investigation has revealed that all four of the above criteria have been met.

#### SIGNIFICANT TOTAL OR PARTIAL SEPARATIONS

The average number of workers engaged in employment related to the production of carbon steel structural shapes declined 17.4 percent in the first eleven months of 1976 compared to the like 1975 period.

#### SALES OR PRODUCTION, OR BOTH, HAVE DECLINED ABSOLUTELY

Sales of carbon steel structural shapes declined 19.0 percent in quantity in the first eleven months of 1976 as compared to the like 1975 period.

#### INCREASED IMPORTS

Imports of carbon steel structural shapes declined each year from 1,614,000 tons in 1972 to 804,900 tons in 1975 before increasing 67.9 percent to 1,351,400 tons in 1976.

The ratio of imports of carbon steel structural shapes to domestic production declined each year from 34.1 percent in 1972 to 19.5 percent in 1975 before increasing to 40.0 percent in 1976.

#### CONTRIBUTED IMPORTANTLY

Some customers that bought carbon steel structural shapes from the Clairton Works, who were contacted in a survey conducted by the Department, indicated that they had reduced purchases from the Clairton Works and had increased purchases of imported structural shapes.

#### CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that increased imports of articles like or directly competitive with the carbon steel structural shapes produced at the Clairton Works of the U.S. Steel Corporation have contributed importantly to the total or partial separation of workers at the plant as required for certification under Section 222 of the Trade Act of 1974.

In accordance with the provisions of the Act, I make the following certification:

All workers at the Clairton Works of the U.S. Steel Corporation in Clairton, Pennsylvania engaged in employment related to the production of carbon steel structural shapes who became totally or partially separated from employment on or after November 15, 1975 are eligible to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C., this 12th day of September 1977.

JAMES F. TAYLOR,  
Director, Office of Management,  
Administration, and Planning.

[FR Doc 77-28878 Filed 9-20-77; 8:45 am]

[4510-23]

[TA-W-1986]

#### CONAWAY WINTER, INC., WILLOW SPRINGS, MO.

#### Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 the Department of Labor herein presents the results of TA-W-1986: Investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in section 222 of the Act.

The investigation was initiated on April 18, 1977. In response to a worker petition received on that date which was filed by the Boot and Shoe Workers Union on behalf of workers and former workers producing infants' footwear at the Willow Springs, Mo., plant of Conaway, Winter, Inc.

The Notice of Investigation was published in the FEDERAL REGISTER on April 29, 1977 (42 FR 21872). No public hearing was requested and none was held.

The information upon which the determination was made was obtained principally from officials of the Willow Springs plant of Conaway Winter, its customers, the U.S. Department of Commerce, the U.S. International Trade Commission, industry analysts and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Trade Act of 1974 must be met:

(1) That a significant number or proportion of the workers in the workers' firm, or an appropriate subdivision thereof, have become totally or partially separated, or are

threatened to become totally or partially separated;

(2) That sales or production, or both, of such firm or subdivision have decreased absolutely;

(3) That articles like or directly competitive with those produced by the firm or subdivision are being imported in increased quantities, either actual or relative to domestic production; and

(4) That such increased imports have contributed importantly to the separations, or threat thereof, and to the decrease in sales or production. The term "contributed importantly" means a cause which is important but not necessarily more important than any other cause.

The investigation has revealed that all of the above criteria have been met.

#### SIGNIFICANT TOTAL OR PARTIAL SEPARATIONS

Employment at the Willow Springs plant of Conaway Winter increased 4.5 percent in 1976 compared to 1975 and declined 7.7 percent in the first three months of 1977 compared to the first three months of 1976. Plant employment declined steadily from December 1976 through April 1977.

#### SALES OR PRODUCTION, OR BOTH, HAVE DECLINED ABSOLUTELY

Production at the Willow Springs plant of Conaway Winter increased 12.0 percent in 1976 compared to 1975 and declined 9.1 percent in the first three months of 1977 compared to the first three months of 1976. Plant production declined steadily from December 1976 through April 1977.

#### INCREASED IMPORTS

Imports of infants' and babies' non-rubber footwear declined from 9.0 million pairs in 1972 to 7.6 million pairs in 1973 to 6.8 million pairs in 1974. In 1975, imports increased to 6.9 million pairs and increased again in 1976 to 10.7 million pairs. During the first quarter of 1976, imports totalled to 3.4 million pairs, which increased to 3.7 million pairs in the first quarter of 1977.

Imports as a percentage of domestic production and consumption increased from 28.5 percent and 22.2 percent, respectively, in 1975 to 41.0 percent and 29.1 percent, respectively, in 1976. The ratios of imports to domestic production and consumption increased from 46.6 percent and 31.8 percent, respectively, in the first quarter of 1976 to 63.8 percent and 38.9 percent, respectively, in the first quarter of 1977.

#### CONTRIBUTED IMPORTANTLY

Customers surveyed indicated that they increased purchases of imported infants' footwear either directly or relative to their purchase from the Willow Springs, Mo., plant of Conaway Winter, Inc. The recent finding of the U.S. International Trade Commission based on the very high penetration of imported shoes is that customers of domestic manufacturers such as Conaway Winter increasingly shifted from domestically produced shoes to imported shoes.

#### CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that increases of imports like or directly competitive with infants' footwear produced by the Willow Springs, Mo., plant of Conaway Winter contributed importantly to the total or partial separations of the workers at that plant. In accordance with the provisions of the Trade Act of 1974, I make the following certification:

All workers at the Willow Springs, Mo., plant of Conaway Winter, Inc., who became totally or partially separated from employment on or after November 27, 1976 are eligible to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C., this 20th day of September 1977.

HARRY GRUBERT,  
Director, Office of  
Foreign Economic Research.

[TA-W-2197]

#### DOV INDUSTRIES, INC., SOUTH PLAINFIELD, N.J.

#### Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 the Department of Labor herein presents the results of TA-W-2197: Investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in section 222 of the Act.

The investigation was initiated on July 7, 1977, in response to a worker petition received on June 30, 1977, which was filed by a former employee of Dov Industries, Inc., South Plainfield, N.J. Dov Industries, Inc. is affiliated with Chera Caribe Corp., Aguadilla, P.R. The two corporations are under common ownership. All production is performed by Chera Caribe, while administrative functions are performed by Dov Industries.

The notice of investigation was published in the FEDERAL REGISTER on July 7, 1977 (42 FR 37077). No public hearing was requested and none was held.

The information upon which the determination was made was obtained principally from officials of Dov Industries, Inc., the U.S. Department of Commerce, the U.S. International Trade Commission, industry analysts, and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Trade Act of 1974 must be met:

(1) That a significant number or proportion of the workers in such workers' firm, or an appropriate subdivision thereof, have become totally or partially separated, or are

threatened to become totally or partially separated;

(2) That sales or production, or both, of such firm or subdivision have decreased absolutely;

(3) That articles like or directly competitive with those produced by the firm or subdivision are being imported in increased quantities, either actual or relative to domestic production; and

(4) That such increased imports have contributed importantly to the separations, or threat thereof, and to the decrease in sales or production. The term "contributed importantly" means a cause which is important but not necessarily more important than any other cause.

Without regard to whether the other criteria have been met, the investigation revealed that the second criterion has not been met.

The Department's investigation revealed that company production of washable bedroom slippers began in the fourth quarter of 1975. Company sales and production increased in every quarter of 1976 compared to the previous quarter. In the first half of 1977, sales increased 35.6 percent in value and production increased 37.3 percent in quantity compared to the first half of 1976.

#### CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that sales or production of washable bedroom slippers at Dov Industries, Inc., South Plainfield, N.J., did not decrease as required in section 222 of the Trade Act of 1974.

Signed at Washington, D.C., this 19th day of September 1977.

JAMES F. TAYLOR,  
Director, Office of Management,  
Administration, and Planning.

[4510-23]

[TA-W-2058]

#### GEILICH TANNING CO., TAUNTON, MASS.

#### Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 the Department of Labor herein presents the results of TA-W-2058: Investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in section 222 of the Act.

The investigation was initiated on May 10, 1976 in response to a worker petition received on May 5, 1976 which was filed by three workers on behalf of workers and former workers producing tanned leather at Geilich Tanning Co., Taunton, Mass.

The Notice of Investigation was published in the FEDERAL REGISTER on May 27, 1977 (42 FR 27330). No public hearing was requested and none was held.

The information upon which the determination was made was obtained

principally from officials of Geilich Tanning Co., its customers, the U.S. International Trade Commission, the U.S. Department of Commerce, industry analysts and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of Section 222 of the Trade Act of 1974 must be met:

(1) That a significant number or proportion of the workers in the workers' firm, or an appropriate subdivision thereof, have become totally or partially separated, or are threatened to become totally or partially separated;

(2) That sales or production, or both, of such firm or subdivision have decreased absolutely;

(3) That articles like or directly competitive with those produced by the firm or subdivision are being imported in increased quantities, either actual or relative to domestic production; and

(4) That such increased imports have contributed importantly to the separations, or threat thereof, and to the decrease in sales or production. The term "contributed importantly" means a cause which is important but not necessarily more important than any other cause.

Without regard to whether any of the other criteria have been met, criterion (4) has not been met in 1976 and criterion (3) has not been met in 1977.

#### CONTRIBUTED IMPORTANTLY

The Department conducted a survey of Geilich's customers. This survey revealed that most customers increased purchases of leather from Geilich in 1976. The single customer who reduced purchases from Geilich in that year simultaneously reduced purchases of imported leather. This finding is consistent with Geilich's sales increase of 11 percent in 1976.

#### INCREASED IMPORTS

Imports of tanned and finished cattle-hides decreased in each year from 207.2 million square feet in 1972 to 82.0 million square feet in 1975, then increased to 186.2 million square feet in 1976. Imports declined from 91.7 million square feet in the first six months of 1976 to 28.6 million square feet in the first six months of 1977.

The ratio of imports to domestic production declined in each year from 25.8 percent in 1972 to 10.9 percent in 1975, then increased to 23.0 percent in 1976. In the first quarter of 1977, the imports to production ratio was 12.2 percent, a decline from the ratio of 18.5 percent in the first quarter of 1976. The imports to production ratio was not available for the first six months of 1977. Thus, any layoffs occurring in 1977 cannot reasonably be attributed to increased imports.

#### CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that increases of imports of articles like or directly competitive with tanned leather produced at the Taunton, Massachusetts plant of Geilich Tanning Co.

did not contribute importantly to the total or partial separation of workers at that plant in 1976. I further conclude that imports of articles like or directly competitive with tanned leather produced at Geilich Tanning Co. did not increase in the first six months of 1977 as required for certification under the Trade Act of 1974.

Signed at Washington, D.C., this 19th day of September 1977.

JAMES F. TAYLOR,  
Director, Office of Management,  
Administration, and Planning.

[4510-23]

[TA W-1940-1941]

#### GENERAL MOTORS CORP., LORDSTOWN, OHIO, WILMINGTON, DEL.

##### Certifications Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 the Department of Labor herein presents the results of TA-W-1940-1941: Investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in section 222 of the Act.

The investigation was initiated on March 31, 1977, in response to a worker petition received on March 31, 1977, which was filed by the International Union, United Automobile, Aerospace and Agricultural Implement Workers of America (UAW) on behalf of workers and former workers engaged in the production of subcompact cars at the Lordstown, Ohio, and Wilmington, Del., plants of General Motors Corp., Detroit, Mich.

The notice of investigation was published in the *FEDERAL REGISTER* on April 15, 1977, (42 FR 19937). No public hearing was requested and none was held.

The information upon which the determination was made was obtained principally from officials of General Motors Corp., the U.S. Department of Commerce, the U.S. International Trade Commission, the Motor Vehicle Manufacturers Association, Automotive News, Ward's Automotive Reports, industry analysts and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Trade Act of 1974 must be met:

(1) That a significant number or proportion of the workers in such workers' firm, or an appropriate subdivision of the firm have become totally or partially separated, or are threatened to become totally or partially separated;

(2) That sales or production, or both, of such firm or subdivision have decreased absolutely;

(3) That articles like or directly competitive with those produced by the firm or subdivision are being imported in increased quantities, either actual or relative to domestic production; and

(4) That such increased imports have contributed importantly to the separations, or threat thereof, and to the decrease in sales or production. The term "contributed importantly" means a cause which is important, but not necessarily more important than any other cause.

#### SIGNIFICANT TOTAL OR PARTIAL SEPARATIONS

The average number of hourly workers employed at the Lordstown, Ohio, plant declined 14.0 percent from MY 1974 to MY 1975, increased 3.3 percent from MY 1975 to MY 1976, and then declined 30.8 percent in the first half of MY 1977 compared to the same period of MY 1976. Average hourly employment declined 17.6 percent in the period March 1976-February 1977 compared to the March 1975-February 1976 period.

Production of subcompact cars at the Wilmington, Del., plant began in the first quarter of MY 1976. Average hourly employment declined 9.2 percent, 11.2 percent, and 48.2 percent, respectively, in the second, third, and fourth quarters of MY 1976 compared to the immediately preceding quarters of the same year, and declined 53.5 percent in the first half of MY 1977 compared to the same period of MY 1976.

#### SALES OR PRODUCTION, OR BOTH, HAVE DECREASED ABSOLUTELY

Production of subcompact cars at the Lordstown, Ohio plant declined 25.0 percent from MY 1974 to MY 1975, 5.9 percent from MY 1975 to MY 1976, and 64.0 percent in the first half of MY 1977 compared to the first half of MY 1976.

Production of subcompact cars at the Wilmington, Del. plant, which began in the first quarter of MY 1976, declined 1.9 percent, 9.2 percent and 52.4 percent, respectively, in the second, third and fourth quarters of MY 1976 compared to the immediately preceding quarters of the same year, and declined 54.4 percent in the first half of MY 1977 compared to the first half of MY 1976.

#### INCREASED IMPORTS

Imports of subcompact cars increased from 1,393.4 thousand units in MY 1974 to 1,437.9 thousand units in MY 1975 and then declined to 1,325.4 thousand units in MY 1976. In the first quarter of MY 1977, imports numbered 350.5 thousand units, up from 301.3 thousand units in the first quarter of MY 1976.

The ratio of imports to domestic production increased from 108.6 percent in MY 1974 to 180.8 percent in MY 1975 and then fell to 142.9 percent in MY 1976. The ratio of imports to domestic production increased steadily from 101.4 percent in the first quarter of MY 1976 to 260.8 percent in the first quarter of MY 1977.

#### CONTRIBUTED IMPORTANTLY

Subcompact car imports are produced by American-based companies, primarily in Canada, and by foreign-based companies in countries other than Canada. In MY 1976, 19 percent of subcompact imports were built in Canada and 81

percent were built overseas. The cars produced in Canada are indistinguishable from the same make and model cars produced at U.S. plants.

General Motors' imports of subcompact cars from Canada declined 17.7 percent from MY 1975 to MY 1976 and then increased 36.3 percent in the first half of MY 1977 compared to the same period of MY 1976.

Imports of subcompact cars from Canada by General Motors, indistinguishable from those produced at the Lordstown, Ohio plant, increased 4.3 percent from MY 1975 to MY 1976, and increased 40.5 percent in the first half of MY 1977 compared to the same period of MY 1976.

Imports have penetrated the domestic market for subcompact cars to the extent that during MY 1974-1976 more than 50 percent of all subcompacts sold domestically were imported. From the first quarter of MY 1976 to the first quarter of MY 1977 the share of the domestic subcompact market held by imports rose steadily from 51.0 percent to 61.6 percent. During the same period, the market share held by domestically built GM subcompacts decreased from 23.8 percent to 19.8 percent and the share held by other domestically built subcompacts fell from 25.2 percent to 18.6 percent.

#### CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that increases of imports like or directly competitive with subcompact cars produced at the Lordstown, Ohio, and Wilmington, Del. plants of the General Motors Corp., contributed importantly to the total or partial separation of the workers at such plants. In accordance with the provisions of the Trade Act of 1974, I make the following certifications:

All hourly and salaried workers of the General Motors Corp., Lordstown, Ohio, assembly plant (TA-W-1940), engaged in employment related to the production of subcompact cars, who became totally or partially separated on or after March 28, 1976 are eligible to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974; and

All hourly and salaried workers of the General Motors Corp., Wilmington, Del., assembly plant (TA-W-1941) who became totally or partially separated on or after March 28, 1976 are eligible to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C., this 22d day of September 1977.

GLORIA G. PRATT,  
Director, Office of  
Foreign Economic Policy.

[FR Doc.77-28882 Filed 9-29-77; 8:45 am]

[4510-23]

[TA-W-2,002-2,022]

#### GENERAL MOTORS CORP., DETROIT, MICH.

##### Determinations Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 the Department of Labor herein presents the results of TA-W-2,002-2,022: Investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in section 222 of the Act.

The investigation was initiated on April 25, 1977, in response to a worker petition received on April 20, 1977, which was filed by the International Union, United Automobile, Aerospace and Agricultural Implement Workers of America (UAW) on behalf of workers and former workers engaged in the production of subcompact car parts at twenty-one (21) plants of the General Motors Corp., Detroit, Mich.

The notice of investigation was published in the *FEDERAL REGISTER* on May 10, 1977 (42 FR 23657). No public hearing was requested and none was held.

The information upon which the determination was made was obtained principally from officials of General Motors Corp., the U.S. Department of Commerce, the U.S. International Trade Commission, the Motor Vehicle Manufacturers Association, Automotive News, Ward's Automotive Reports, industry analysts and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of Section 222 of the Trade Act of 1974 must be met:

(1) That a significant number or proportion of the workers in such workers' firm, or an appropriate subdivision of the firm have become totally or partially separated, or are threatened to become totally or partially separated;

(2) That sales or production, or both, of such firm or subdivision have decreased absolutely;

(3) That articles like or directly competitive with those produced by the firm or subdivision are being imported in increased quantities, either actual or relative to domestic production; and

(4) That such increased imports have contributed importantly to the separations, or threat thereof, and to the decrease in sales or production. The term "contributed importantly" means a cause which is important, but not necessarily more important than any other cause.

Without regard to whether the other criteria have been met, the investigation has revealed that the fourth criterion has not been met with respect to all petitioning plants with the exception of the

Lordstown, Ohio, stamping plant (TA-W-2002). The investigation has revealed that all of the criteria have been met with respect to the Lordstown stamping plant.

#### SIGNIFICANT TOTAL OR PARTIAL SEPARATIONS

The average number of hourly workers employed at the Lordstown, Ohio, stamping plant declined 8.5 percent in the March 1976-February 1977 period compared to the March 1975-February 1976 period.

#### SALES OR PRODUCTION, OR BOTH, HAVE DECREASED ABSOLUTELY

Adjusted sales of parts produced for use in subcompact cars at the Lordstown, Ohio, stamping plant declined 33.4 percent in the March 1976-February 1977 period compared to the March 1975-February 1976 period.

#### INCREASED IMPORTS

Imports of subcompact cars increased from 1,393.4 thousand units in MY 1974 to 1,437.9 thousand units in MY 1975 and then declined to 1,325.4 thousand units in MY 1976. In the first quarter of MY 1977, imports numbered 350.5 thousand units, up from 301.3 thousand units in the first quarter of MY 1976.

The ratio of imports to domestic production increased from 108.6 percent in MY 1974 to 180.8 percent in MY 1975 and then fell to 142.9 percent in MY 1976. The ratio of imports to domestic production increased steadily from 101.4 percent in the first quarter of MY 1976 to 260.8 percent in the first quarter of MY 1977.

#### CONTRIBUTED IMPORTANTLY

In a previous Department of Labor investigation (TA-W-1940-1941), it was determined that increased imports of subcompact cars contributed importantly to the separation of workers at two General Motors assembly plants producing such cars.

The Department's investigation revealed that during the period March 1976-February 1977, the Lordstown Ohio, stamping plant produced nearly 90 percent of its output for use in subcompact cars and therefore was integrated into the production of those cars.

The investigation further revealed that the remaining twenty petitioning plants listed below produced less than one-sixth of their outputs for use in subcompact cars, and therefore were not integrated into the production of those cars: Chevrolet Motor—Massena, N.Y. (TA-W-2003); Chevrolet Motor—Tonawanda, N.Y. (TA-W-2004); Chevrolet Motor—Buffalo, N.Y. (TA-W-2005); Rochester Products—Rochester, N.Y. (TA-W-2006); AC Spark Plug—Flint, Mich. (TA-W-2007); Diesel Equip-

ment—Grand Rapids, Mich. (TA-W-2008); Chevrolet Transmission—Muncie, Ind. (TA-W-2009); Saginaw Steering Gear—Saginaw, Mich. (TA-W-2010); Guide Lamp—Anderson, Ind. (TA-W-2011); Chevrolet Metal Fabricating—Flint, Mich. (TA-W-2012); Fisher Fabricating—Willow Springs, Ill. (TA-W-2013); Chevrolet Manufacturing—Flint, Mich. (TA-W-2014); Chevrolet Service Parts—Saginaw, Mich. (TA-W-2015); Fisher Cut and Sew—Grand Rapids, Mich. (TA-W-2016); Delco Electronics—Kokomo, Ind. (TA-W-2017); Delco Battery—Muncie, Ind. (TA-W-2018); Harrison Radiator—Buffalo, N.Y. (TA-W-2019); New Departure-Hyatt—Sandusky, Ohio (TA-W-2020); Chevrolet Transmission—Parma, Ohio (TA-W-2021); and Central Foundry—Bedford, Ind. (TA-W-2022).

## CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that increases of imports like or directly competitive with General Motors subcompact cars contributed importantly to the total or partial separation of workers producing parts for such General Motors cars at the Lordstown, Ohio, stamping plant (TA-W-2002) of the General Motors Corp. I further conclude that increases of imports like or directly competitive with General Motors subcompact cars did not contribute importantly to the total or partial separation of workers at the remaining twenty (20) petitioning auxiliary plants.

In accordance with the provisions of the Act, I make the following certification:

All hourly and salaried workers of the General Motors Corp., Lordstown, Ohio, stamping plant (TA-W-2002), engaged in employment related to the production of parts for use in General Motors subcompact cars who became totally or partially separated on or after March 28, 1976, are eligible to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C., this 19th day of September 1977.

JAMES F. TAYLOR,  
Director, Office of Management,  
Administration, and Planning.

[FR Doc. 77-28884 Filed 9-29-77; 8:45 am]

## [4510-23]

[TA-W-1727]

## HOLLY SUGAR CORP., DELTA COLO.

## Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 the Department of Labor herein presents the results of TA-W-1727: Investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in section 222 of the Act.

The investigation was initiated on March 3, 1977, in response to a worker petition received on February 22, 1977, which was filed by the American Fed-

eration of Grain Millers on behalf of workers and former workers producing sugar at the Delta, Colo., plant of the Holly Sugar Corp., Colorado Springs, Colo.

The Notice of Investigation was published in the FEDERAL REGISTER on March 15, 1977 (42 FR 14185). No public hearing was requested and none was held.

The information upon which the determination was made was obtained principally from officials and publications of Holly Sugar Corp., the U.S. Department of Commerce, the U.S. Department of Agriculture, the U.S. International Trade Commission, industry analysts, and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Trade Act of 1974 must be met:

(1) That a significant number or proportion of the workers in the workers' firm, or appropriate subdivision thereof, have become totally or partially separated, or are threatened to become totally or partially separated;

(2) That sales or production, or both, of such firm or subdivision have decreased absolutely;

(3) That articles like or directly competitive with those produced by the firm or subdivision are being imported in increased quantities, either actual or relative to domestic production; and

(4) That such increased imports have contributed importantly to the separations, or threat thereof, and to the decrease in sales or production. The term "contributed importantly" means a cause which is important but not necessarily more important than any other cause.

The investigation revealed that all four of the above criteria have been met.

## SIGNIFICANT TOTAL OR PARTIAL SEPARATIONS

Average employment of production workers at the Delta plant declined 5.2 percent in the first quarter of 1977 compared to the same period in 1976.

Permanent layoffs on non-seasonal workers at the Delta plant began March 1, 1977.

## SALES OR PRODUCTION, OR BOTH, HAVE DECREASED ABSOLUTELY

Sales from the Delta plant declined 13.6 percent in the first quarter of 1977 compared to the same period in 1976. Production at the Delta plant permanently ceased during February 1977.

## INCREASED IMPORTS

Imports of sugar decreased 2 percent between 1972 and 1973, moving from 5.46 million short tons to 5.33 million short tons. In 1974, sugar imports increased to 5.77 million short tons.

Imports in 1975 totaled 3.88 million short tons and imports in 1976 increased 20 percent to 4.66 million short tons. The ratio of imports to domestic production increased from 59 percent in 1975 to 66 percent in 1976.

## CONTRIBUTED IMPORTANTLY

Prior to 1975, imports of sugar were regulated by statute. Since the expiration of the Sugar Act on December 31, 1974, imported sugar has entered the United States in the absence of price restrictions and quota levels. As a result, domestic prices of sugar have been merged with world sugar prices subjecting domestic prices to the competitive forces of an increased supply of sugar in a previously regulated market.

The world sugar supply currently surpasses demand by about 4 million tons annually. Sugar prices have dropped sharply since 1974 when the price was 57.3 cents per pound. Presently the price of raw sugar is under 11 cents per pound.

Profitable operation of the domestic sugar beet industry is dependent upon numerous factors, including production costs, yield of the sugar beet harvest, and prices of substitutable crops for sugar beets. However, the single most important determinant of profitable operation is the price of sugar. Depressed sugar prices resulting from increased imports made continued operation of Holly Sugar Corp.'s Delta plant economically unfeasible. The company therefore permanently ceased production at the Delta plant in February 1977, at the end of 1976/77 sugar beet campaign.

## CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that increases of imports like or directly competitive with sugar products produced at the Delta, Colo., plant of the Holly Sugar Corp., Colorado Springs, Colo., contributed importantly to the total or partial separations of the workers at that plant. In accordance with the provisions of the Trade Act of 1974, I make the following certification:

All workers of the Delta, Colo., plant of the Holly Sugar Corp., Colorado Springs, Colo., who became totally or partially separated from employment on or after March 1, 1977, are eligible to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C., this 19th day of September 1977.

JAMES F. TAYLOR,  
Director, Office of Management,  
Administration, and Planning.

[FR Doc. 77-28885 Filed 9-29-77; 8:45 am]

## [4510-23]

[TA-W-1092]

J. BASS & CO., WEST HAZELTON, PA.  
Revised Determination of Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 222 of the Trade Act of 1974 and in accordance with section 223(a) of such Act, on December 23, 1976, the Department of Labor issued a Notice of Negative Determination of Eligibility to Apply for Adjustment Assistance applicable to

workers and former workers of J. Bass & Co., West Hazelton, Pa. (TA-W-1092).

The Notice of Negative Determination was published in the FEDERAL REGISTER on January 4, 1977 (42 FR 885).

Subsequent to the publication of the original determination, the Office of Trade Adjustment Assistance received an inquiry on behalf of workers and former workers who were separated from J. Bass & Co. Further investigation revealed that apparel customers of converters who contracted with J. Bass & Co. do purchase imported dyed and printed fabric.

## CONCLUSION

Based on the additional evidence, a review of the entire record and in accordance with the provisions of the Act, I have determined that the following certification is hereby made as follows:

All workers at J. Bass & Co., West Hazelton, Pa., who became totally or partially separated on or after October 1, 1976, are eligible to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C., this 19th day of September 1977.

JAMES F. TAYLOR,  
Director, Office of Management,  
Administration, and Planning.

## [4510-23]

[TA-W-1849]

## JONART MANUFACTURING, WILKES-BARRE, PENNSYLVANIA

## Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974 the Department of Labor herein presents the results of TA-W-1849: investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in Section 222 of the Act.

The investigation was initiated on March 22, 1977 in response to a worker petition received on March 22, 1977 which was filed by the International Ladies' Garment Workers' Union on behalf of workers and former workers producing women's dresses at Jonart Manufacturing, Wilkes-Barre, Pennsylvania.

The Notice of Investigation was published in the FEDERAL REGISTER on April 5, 1977 (42 FR 18156). No public hearing was requested and none was held.

The information upon which the determination was made was obtained principally from officials of Jonart Manufacturing, the U.S. Department of Commerce, the International Trade Commission, industry analysts, and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of Section 222 of the Trade Act of 1974 must be met:

(1) That a significant number or proportion of the workers in the workers' firm, or an appropriate subdivision thereof, have become totally or partially separated, or are threatened to become totally or partially separated;

(2) That sales or production, or both, of such firm or subdivision have decreased absolutely;

(3) That articles like or directly competitive with those produced by the firm or subdivision are being imported in increased quantities, either actual or relative to domestic production; and

(4) That such increased imports have contributed importantly to the separations, or threat thereof, and to the decrease in sales or production. The term "contributed importantly" means a cause which is important but not necessarily more important than any other cause.

Without regard to whether any of the other criteria have been met, criterion (2) has not been met.

Sales and production figures for Jonart Manufacturing are not separately identifiable from those of a sister company, San Sue Frocks. The following figures represent the combined sales and production of both firms. Sales and production follow the same trends at both plants.

Sales of dresses by Jonart and San Sue Frocks increased 25.8 percent from 1975 to 1976 and increased 39.6 percent in the first half of 1977 compared to the first half of 1976.

Production of dresses by Jonart and San Sue Frocks increased 20.9 percent from 1975 to 1976 and increased 44.4 percent in the first half of 1977 compared to the first half of 1976.

## CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that neither sales nor production of ladies' dresses produced at Jonart Manufacturing, Wilkes-Barre, Pennsylvania have decreased as required for certification under Section 222 of the Trade Act of 1974.

Signed at Washington, D.C., this 23rd day of September 1977.

GLORIA G. PRATT,  
Director, Office of  
Foreign Economic Policy.

## [4510-23]

[TA-W-1850]

## KAREN MANUFACTURING COMPANY, INC., SWEET VALLEY, PENNSYLVANIA

## Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974, the Department of Labor herein presents the results of TA-W-1850: Investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in Section 222 of the Act.

The investigation was initiated on March 22, 1977 in response to a worker

petition received on that date which was filed on behalf of workers and former workers producing women's and misses' dresses at Karen Manufacturing Company, Inc., Sweet Valley, Pennsylvania.

The Notice of Investigation was published in the FEDERAL REGISTER on April 5, 1977 (42 FR 18156). No public hearing was requested and none was held.

The information upon which the determination was made was obtained principally from officials of Karen Manufacturing Company, Inc., its major customer, the U.S. International Trade Commission, the U.S. Department of Commerce, industry analysts, and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of Section 222 of the Trade Act of 1974 must be met:

(1) That a significant number or proportion of the workers in such workers' firm, or an appropriate subdivision thereof, have become totally or partially separated, or are threatened to become totally or partially separated;

(2) That sales or production, or both, of such firm or subdivision have decreased absolutely;

(3) That articles like or directly competitive with those produced by the firm or subdivision are being imported in increased quantities, either actual or relative to domestic production; and

(4) That such increased imports have contributed importantly to the separations, or threat thereof, and to the decrease in sales or production. The term "contributed importantly" means a cause which is important but not necessarily more important than any other cause.

Without regard to whether any of the other criteria have been met, criterion (4) has not been met.

The Karen Manufacturing Company is an apparel contractor, producing women's and misses' dresses. The Department contacted the clothing manufacturer who accounted for about 90 percent of Karen Manufacturing's business in 1976. The manufacturer did not import any women's and misses' dresses. Sales by the manufacturer increased from 1975 to 1976, causing increased contract work for Karen Manufacturing during that period. Purchases by the manufacturer from Karen Manufacturing increased in the first quarter of 1977 compared to the first quarter of 1976. Furthermore, unit sales of dresses by Karen Manufacturing increased 34.5 percent from 1975 to 1976.

## CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that imports of articles like or directly competitive with the women's and misses' dresses produced at Karen Manufacturing Company, Inc., Sweet Valley, Pennsylvania did not contribute importantly to the total or partial separations of workers at that firm.

## [4510-23]

[TA-W-2063]

**KENSINGTON DRESS CO.,  
PHILADELPHIA, PENNSYLVANIA**  
Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974 the Department of Labor herein presents the results of TA-W-2063: Investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in Section 222 of the Act.

The investigation was initiated on May 11, 1977 in response to a worker petition received on that date which was filed by the International Ladies' Garment Workers Union on behalf of workers and former workers producing women's clothing and men's sportcoats at the Philadelphia, Pennsylvania plant of Kensington Dress Company.

The Notice of Investigation was published in the FEDERAL REGISTER on May 24, 1977 (42 FR 36481). No public hearing was requested and none was held.

The information upon which the determination was made was obtained principally from officials of Kensington Dress Company, its customers, the U.S. Department of Commerce, the U.S. International Trade Commission, industry analysts, and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of Section 222 of the Trade Act of 1974 must be met:

- (1) That a significant number or proportion of the workers in the workers' firm, or an appropriate subdivision thereof, have become totally or partially separated, or are threatened to become totally or partially separated;
- (2) That sales or production, or both, of such firm or subdivision have decreased absolutely;
- (3) That articles like or directly competitive with those produced by the firm or subdivision are being imported in increased quantities, either actual or relative to domestic production; and
- (4) That such increased imports have contributed importantly to the separations, or threat thereof, and to the decrease in sales or production. The term "contributed importantly" means a cause which is important but not necessarily more important than any other cause.

Without regard to whether any of the other criteria have been met, criterion (4) has not been met.

Over 95 percent of the manufacturers who contract work from Kensington responded to the Department's survey. The

primary manufacturer for whom Kensington produced clothing reduced orders to Kensington in 1976 compared to 1975 and in the first quarter of 1977 compared to the like period in 1976. Reduced orders to Kensington were largely the result of the manufacturer's decision to increase his own "in-house" production, since the manufacturer, himself, experienced increased sales and production in 1976 compared to 1975. Retail customers of the primary manufacturer did not reduce orders to the manufacturer in order to increase purchases of imported clothing. All other customers of Kensington who were surveyed increased orders to Kensington in 1976 compared to 1975.

## CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that increases of imports of articles like or directly competitive with women's and men's apparel produced at Kensington Dress Company, Philadelphia, Pennsylvania did not contribute importantly to the total or partial separations of workers at that plant.

Signed at Washington, D.C., this 19th day of September 1977.

JAMES F. TAYLOR,  
Director, Office of Management,  
Administration, and Planning.  
[FR Doc.77-28888 Filed 9-29-77; 8:45 am]

## [4510-23]

[TA-W-2201]

**MORTON'S SHOE STORES, INC., BOSTON,  
MASSACHUSETTS**  
Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974 the Department of Labor herein presents the results of TA-W-2201: Investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in Section 222 of the Act.

The investigation was initiated on July 13, 1977 in response to a worker petition received on July 11, 1977 which was filed on behalf of workers and former workers engaged in warehousing and distribution operations at Morton's Shoe Stores, Incorporated, Boston, Massachusetts.

The notice of investigation was published in the FEDERAL REGISTER on August 2, 1977 (42 FR 39157). No public hearing was requested and none was held.

The information upon which the determination was made was obtained principally from officials of Morton's Shoe Stores, Incorporated and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of Section 222 of the Trade Act of 1974 must be met:

- (1) That a significant number or proportion of the workers in the workers' firm or an appropriate subdivision thereof, have become totally or partially separated, or are threatened to become totally or partially separated;
- (2) That sales or production, or both, of such firm or subdivision have decreased absolutely;
- (3) That articles like or directly competitive with those produced by the firm or subdivision are being imported in increased quantities, either actual or relative to domestic production; and
- (4) That such increased imports have contributed importantly to the separations, or threat thereof, and to the decrease in sales or production. The term "contributed importantly" means a cause which is important but not necessarily more important than any other cause.

If any of the above criteria is not satisfied, a negative determination must be made.

Morton's Shoe Stores, Incorporated and its subsidiaries are engaged in retail distribution and manufacture of footwear. Distribution facilities and offices are maintained in Boston, Massachusetts. Manufacturing operations are under two wholly owned subsidiaries of Morton's Shoe Stores, Incorporated in five locations in New England.

Morton's Shoe Stores, Incorporated, Boston, Massachusetts, the retail distribution operation, is a discount, distributing and selling footwear. The company distributes a full line of men's women's, and children's footwear and accessories including handbags and hosiery. The plant at Boston consists of administrative offices and a warehouse of 100,000 square feet.

Footwear is purchased from domestic and foreign suppliers. Retail distribution operations are channelled through leased departments in discount stores, free-standing retail outlets, and wholesale distribution to retail outlets.

The petitioning group of workers were employed at the Boston, Massachusetts distribution facility of Morton's Shoe Stores, Incorporated. The workers were engaged in warehousing and distribution operations and performed no production functions. Workers employed at Morton's Shoe Stores, Incorporated perform a service, i.e. warehousing and distribution of footwear.

## CONCLUSION

After careful review of the issues, I have determined that services of the kind provided by workers employed at Morton's Shoe Stores, Incorporated, Boston, Massachusetts are not "articles" within the meaning of Section 222(3) of the Trade Act of 1974. The petition for trade adjustment assistance is, therefore, denied.

Signed at Washington, D.C., this 19th day of September 1977.

JAMES F. TAYLOR,  
Director, Office of Management,  
Administration, and Planning.  
[FR Doc.77-28889 Filed 9-29-77; 8:45 am]

## [4510-23]

[TA-W-2030]

**QUANEX CORP., SOUTH LYON, MICH.**  
Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 the Department of Labor herein presents the results of TA-W-2030: Investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in section 222 of the Act.

The investigation was initiated on May 10, 1977, in response to a worker petition received on April 25, 1977, which was filed by the United Steelworkers of America on behalf of workers and former workers producing carbon and alloy seamless steel tubing at the South Lyon, Mich., plant of the Quanex Corp.

The Notice of Investigation was published in the FEDERAL REGISTER on May 10, 1977 (42 FR 23655). No public hearing was requested and none was held.

The information upon which the determination was made was obtained principally from officials of the Quanex Corp., its customers, the U.S. Department of Commerce, the U.S. International Trade Commission, industry analysts, and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Trade Act of 1974 must be met:

- (1) That a significant number or proportion of the workers in the workers' firm, or an appropriate subdivision thereof, have become totally or partially separated, or are threatened to become totally or partially separated;
- (2) That sales or production, or both, of such firm or subdivision have decreased absolutely;
- (3) That articles like or directly competitive with those produced by the firm or subdivision are being imported in increased quantities, either actual or relative to domestic production; and
- (4) That such increased imports have contributed importantly to the separations, or threat thereof, and to the decrease in sales or production. The term "contributed importantly" means a cause which is important but not necessarily more important than any other cause.

Without regard to whether any of the other criteria have been met, criterion (2) has not been met.

The South Lyon, Mich., plant of the Quanex Corp. is a small job shop which manufactures carbon and alloy seamless tubing according to customer specifications on the quality of steel, size of the outside diameter, thickness of the wall and pressure and corrosion specifications.

The Department's investigation revealed that sales are equal to production at the South Lyon, Mich., plant and that production of seamless steel tubing increased 4 percent in fiscal 1976 compared to fiscal 1975 and further increased 7.8 percent in the fiscal first half of 1977 compared to the same period in 1976.

The fiscal year begins on November 1 and ends on October 31.

## CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that sales or production of seamless steel tubing at the South Lyon, Mich., plant of the Quanex Corp. have not decreased as required for certification under section 222 of the Trade Act of 1974.

Signed at Washington, D.C., this 20th day of September 1977.

HARRY GRUBERT,  
Director, Office of  
Foreign Economic Research.  
[FR Doc.77-28890 Filed 9-29-77; 8:45 am]

## [4510-23]

[TA-W-1494 and 1495]

**REPUBLIC STEEL CORP., MANUFACTURING GROUP, CANTON AND NILES, OHIO**  
Negative Determinations Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 the Department of Labor herein presents the results of TA-W-1494 and 1495: Investigations regarding certification of eligibility to apply for worker adjustment assistance as prescribed in section 222 of the Act.

The investigations were initiated on December 15, 1976, in response to two worker petitions received on that date which were filed on behalf of workers and former workers producing various steel products in the Manufacturing Group of Republic Steel Corp., Cleveland, Ohio. This investigation covers the Berger Division—Canton Industrial Plant, Canton, Ohio; Culvert Division—Canton Drainage Plant, Canton, Ohio; and Niles Joist Plant and Niles Door Plant, Niles, Ohio.

The notices of investigation were published in the FEDERAL REGISTER on January 11, 1977 (42 FR 2377). No public hearing was requested and none was held.

The information upon which the determinations were made was obtained principally from officials of Republic Steel Corp., its customers, the U.S. Department of Commerce, the U.S. International Trade Commission, industry analysts, and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Trade Act of 1974 must be met:

- (1) That a significant number or proportion of the workers in the workers' firm, or an appropriate subdivision thereof, have become totally or partially separated, or are threatened to become totally or partially separated;
- (2) That sales or production or both, of such firm or subdivision have decreased absolutely;
- (3) That articles like or directly competitive with those produced by the firm or subdivision are being imported in increased

quantities, either actual or relative to domestic production; and

- (4) That such increased imports have contributed importantly to the separations, or threat thereof, and to the decrease in sales or production. The term "contributed importantly" means a cause which is important but not necessarily more important than any other cause.

**I. BERGER DIVISION—CANTON INDUSTRIAL PLANT**

Without regard to whether any of the other criteria have been met, criterion two (2) was not met for the Canton Industrial Plant.

The Department's investigation revealed that the Canton Industrial Plant produces steel lockers and shelving and does some contract manufacturing. Total steel shipments from the plant increased 7 percent in quantity from 1975 to 1976. Total production at the plant increased 0.1 percent from 1975 to 1976.

## CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that sales or production at the Berger Division—Canton Industrial Plant, Canton, Ohio, of the Manufacturing Group of Republic Steel Corp., Cleveland, Ohio, did not decline as required for certification under section 222 of the Trade Act of 1974.

**II. CULVERT DIVISION—CANTON DRAINAGE PLANT AND CANTON DRAINAGE FAIRHOPE PLANT**

Without regard to whether any of the other criteria have been met, criterion (4) was not met for the Canton Drainage Plant and Canton Drainage Fairhope Plant.

The Department's investigation revealed that the Canton Drainage Plant produces drainage pipe and steel piling. The Canton Drainage Fairhope Plant produces drainage pipe and sectional plate. Customers of the Culvert Division were surveyed by the Office of Trade Adjustment Assistance regarding their purchases of steel products. None of the customers surveyed purchased imported drainage pipe, steel piling or sectional plate.

## CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that increases of imports like or directly competitive with steel piling, drainage pipe and sectional plate produced at the Culvert Division—Canton Drainage Plant and Canton Drainage Fairhope Plant, Canton, Ohio, of the Manufacturing Group of Republic Steel Corp., Cleveland, Ohio, did not contribute importantly to the total or partial separation of workers at those plants.

## III. NILES JOIST PLANT

Without regard to whether any of the other criteria have been met, criterion three (3) was not met for the Niles Joist Plant.

The Department's investigation revealed that the Niles Joist Plant produced joist with depth greater than three inches. Production at the plant ceased

V

U  
M  
I

in December 1975. Shipping and other sales functions were performed at the plant throughout 1976. The plant closed in December 1976. Imports of structural steel shapes (which includes joist) declined absolutely and relative to domestic shipments in each year from 1972 through 1975. The ratios of imports to domestic shipments and consumption declined from 19.7 percent and 17.2 percent, respectively, in 1974 to 19.5 percent and 16.8 percent, respectively, in 1975. Imports declined 30 percent from 1974 to 1975.

## CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that imports of products like or directly competitive with joist produced at the Niles Joist Plant, Niles, Ohio, of the Manufacturing Group of Republic Steel Corp., Cleveland, Ohio, did not increase as required for certification under section 222 of the Trade Act of 1974.

## IV. NILES DOOR PLANT

Without regard to whether any of the other criteria have been met, criterion two (2) was not met for the Niles Door Plant.

The Department's investigation revealed that the Niles Door Plant produces steel door frames. Shipments from the plant increased 4 percent in quantity from 1975 to 1976. Production at the plant increased 7 percent from 1975 to 1976.

## CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that sales or production of the Niles Door Plant, Niles, Ohio, of the Manufacturing Group of Republic Steel Corp., Cleveland, Ohio, did not decline as required for certification under section 222 of the Trade Act of 1974.

Signed at Washington, D.C., this 12th day of September 1977.

JAMES F. TAYLOR,  
Director, Office of Management,  
Administration, and Planning.

[FR Doc. 77-28891 Filed 9-29-77; 8:45 am]

## [4510-23]

[TA-W-1826]

ROXANNE FASHIONS, INC., PLYMOUTH, PA.

## Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974 the Department of Labor herein presents the results of TA-W-1826: Investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in Section 222 of the Act.

The investigation was initiated on March 21, 1977 in response to a worker petition received on March 18, 1977 in response to a worker petition received on March 18, 1977 which was filed by the International Ladies' Garment Workers'

Union on behalf of workers and former workers producing women's two-piece pant dresses at the Plymouth, Pa. plant of Roxanne Fashions, Inc.

The Notice of Investigation was published in the FEDERAL REGISTER on April 5, 1977 (42 FR 18158). No public hearing was requested, and none was held.

The information upon which the determination was made was obtained principally from officials of Roxanne Fashions, Inc., its customers, the U.S. Department of Commerce, the U.S. International Trade Commission, industry analysts, and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of Section 222 of the Trade Act of 1974 must be met:

(1) That a significant number or proportion of the workers in the workers' firm, or an appropriate subdivision thereof, have become totally or partially separated, or are threatened to become totally or partially separated;

(2) That sales or production, or both, of such firm or subdivision have decreased absolutely;

(3) That articles like or directly competitive with those produced by the firm or subdivision are being imported in increased quantities, either actual or relative to domestic production; and

(4) That such increased imports have contributed importantly to the separations, or threat thereof, and to the decrease in sales or production. The term "contributed importantly" means a cause which is important but not necessarily more important than any other cause.

Without regard to whether any of the other criteria have been met, criterion (4) has not been met.

The investigation has revealed that Roxanne Fashions, Inc. produces according to orders received from two manufacturers, neither of which purchases imported goods or employs foreign contractors. One of the manufacturers experienced an increase in sales from 1975 to 1976. The other manufacturer experienced a decrease in sales, but customers of this manufacturer indicated that they have not switched their purchases of pant dresses from domestic to foreign sources.

## CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that imports of articles like or directly competitive with women's two-piece pant dresses produced at Roxanne Fashions, Inc., Plymouth, Pa. have not contributed importantly to the total or partial separations of workers at that firm as required for certification under Section 222 of the Trade Act of 1974.

Signed at Washington, D.C., this 23rd day of September 1977.

GLORIA G. PRATT,  
Director, Office of  
Foreign Economic Policy.

[FR Doc. 77-28892 Filed 9-29-77; 8:45 am]

## [4510-23]

[TA-W-1827]

SAN SUE FROCKS, NANTICOKE, PA.

## Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974 the Department of Labor herein presents the results of TA-W-1827: Investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in Section 222 of the Act.

The investigation was initiated on March 2, 1977 in response to a worker petition received on March 18, 1977 which was filed by the International Ladies' Garment Workers' Union on behalf of workers and former workers producing women's dresses at San Sue Frocks, Nanticoke, Pa.

The Notice of Investigation was published in the FEDERAL REGISTER on April 5, 1977 (42 FR 18158). No public hearing was requested and none was held.

The information upon which the determination was made was obtained principally from officials of San Sue Frocks, the U.S. Department of Commerce, the International Trade Commission, industry analysts, and Department files.

In order to make an affirmative determination and issue a certificate of eligibility to apply for adjustment assistance, each of the group eligibility requirements of Section 222 of the Trade Act of 1974 must be met:

(1) That a significant number or proportion of the workers in the workers' firm, or an appropriate subdivision thereof, have become totally or partially separated, or are threatened to become totally or partially separated;

(2) That sales or production, or both, of such firm or subdivision have decreased absolutely;

(3) That articles like or directly competitive with those produced by the firm or subdivision are being imported in increased quantities, either actual or relative to domestic production; and

(4) That such increased imports have contributed importantly to the separations, or threat thereof, and to the decrease in sales or production. The term "contributed importantly" means a cause which is important but not necessarily more important than any other cause.

Without regard to whether any of the other criteria have been met, criterion (2) has not been met.

Sales and production figures for San Sue Frocks are not separately identifiable from those of a sister company, Jonart Manufacturing. The following figures represent the combined sales and production of both firms. Sales and production follow the same trends at both plants.

Sales of dresses by San Sue Frocks and Jonart increased 25.8 percent from 1975 to 1976 and increased 39.6 percent in the first half of 1977 compared to the first half of 1976.

Production of dresses by San Sue Frocks and Jonart increased 20.9 percent

from 1975 to 1976 and increased 44.4 percent in the first half of 1977 compared to the first half of 1976.

## CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that neither sales nor production of ladies' dresses produced at San Sue Frocks, Nanticoke, Pa. have decreased as required for certification under Section 222 of the Trade Act of 1974.

Signed at Washington, D.C., this 23rd day of September 1977.

GLORIA G. PRATT,  
Director, Office of  
Foreign Economic Policy.

[FR Doc. 77-28893 Filed 9-29-77; 8:45 am]

## [4510-23]

[TA-W-1832]

SLOCUM DRESS, LUZERNE, PA.

## Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974 the Department of Labor herein presents the results of TA-W-1832: Investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in Section 222 of the Act.

The investigation was initiated on March 21, 1977 in response to a worker petition received on March 18, 1977 which was filed on behalf of workers and former workers producing women's dresses at Slocum Dress, Luzerne, Pa.

The Notice of Investigation was published in the FEDERAL REGISTER on April 5, 1977 (42 FR 18158). No public hearing was requested and none was held.

The information upon which the determination was made was obtained principally from officials of Slocum Dress, its customers, the U.S. International Trade Commission, U.S. Department of Commerce, industry analysts and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of Section 222 of the Trade Act of 1974 must be met:

(1) That a significant number or proportion of the workers in the workers' firm, or an appropriate subdivision thereof, have become totally or partially separated, or are threatened to become totally or partially separated;

(2) That sales or production, or both, of such firm or subdivision have decreased absolutely;

(3) That articles like or directly competitive with those produced by the firm or subdivision are being imported in increased quantities, either actual or relative to domestic production; and

(4) That such increased imports have contributed importantly to the separations, or threat thereof, and to the decrease in sales or production. The term "contributed importantly" means a cause which is important but not necessarily more important than any other cause.

Without regard to whether any of the other criteria have been met, criterion (2) has not been met.

Production at Slocum Dress is performed on a contract basis, therefore Slocum Dress does not produce for inventory and sales is equal to the volume of production. Slocum Dress does not import women's dresses.

Sales, in quantity, of women's dresses at Slocum Dress decreased 41 percent in 1975 from 1974 and then increased 135 percent in 1976 compared to 1975.

Sales, in value, declined 28 percent in 1975 from 1974 and then increased 95 percent in 1976 compared to 1975.

Sales in both quantity and value increased in each quarter of 1976 compared to the like quarter in previous year.

## CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that sales or production, or both, have not decreased absolutely as required for certification in section 222 of the Trade Act of 1974. The petition was therefore denied.

Signed at Washington, D.C., this 19th day of September 1977.

JAMES F. TAYLOR,  
Director, Office of Management,  
Administration, and Planning.

[FR Doc. 77-28894 Filed 9-29-77; 8:45 am]

TORRINGTON CO., TORRINGTON, CONN.

## Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 the Department of Labor herein presents the results of TA-W-2000: Investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in section 222 of the Act.

The investigation was initiated on April 21, 1977, in response to a worker petition received on April 21, 1977, which was filed by the United Auto Workers on behalf of workers and former workers producing sewing machine needles and knitting machine needles at the Torrington, Conn. (Excelsior) plant of The Torrington Co.

The notice of investigation was published in the FEDERAL REGISTER on May 6, 1977 (42 FR 23216). No public hearing was requested and none was held.

The information upon which the determination was made was obtained principally from officials of The Torrington Co., its customers, the U.S. Department of Commerce, the U.S. International Trade Commission, industry analysts and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Trade Act of 1974 must be met:

(1) That a significant number or proportion of the workers in the workers' firm or an appropriate subdivision thereof, have become totally or partially separated, or are threatened to become totally or partially separated;

(2) That sales or production, or both, of such firm or subdivision have decreased absolutely;

(3) That articles like or directly competitive with those produced by the firm or subdivision are being imported in increased quantities, either actual or relative to domestic production; and

(4) That such increased imports have contributed importantly to the separations, or threat thereof, and to the decrease in sales or production. The term "contributed importantly" means a cause which is important but not necessarily more important than any other cause.

The investigation has revealed that all of the above criteria have been met.

## SIGNIFICANT TOTAL OR PARTIAL SEPARATIONS

Average plant employment increased 16.9 percent in 1976 compared to 1975 and then declined 9.5 percent in the first quarter of 1977 compared to the first quarter of 1976.

## SALES OR PRODUCTION, OR BOTH, HAVE DECREASED ABSOLUTELY

Plant production of sewing machine needles increased 10.7 percent in 1976 compared to 1975 and then declined 26.1 percent in the first half of 1977 compared to the first half of 1976.

Plant production of knitting machine needles increased 21.1 percent in 1976 compared to 1975 and then declined 28.7 percent in the first half of 1977 compared to the first half of 1976.

## INCREASED IMPORTS

U.S. imports of sewing machine needles increased from 287 million needles in 1972 to 327 million needles and 346 million needles, respectively, in 1973 and 1974. U.S. imports declined to 277 million needles in 1975 before increasing to 320 million needles in 1976. U.S. imports totaled 76 million needles in the first quarter of 1976 and increased to 98 million needles in the first quarter of 1977.

The ratio of imported sewing machine needles to domestic production increased from 470 percent in 1972 to 511 percent in 1973. The ratio of imports to domestic production declined to 494 percent in 1974 before increasing to 693 percent and 727 percent, respectively, in 1975 and 1976. The ratio of imports to domestic production increased from 507 percent in the first quarter of 1976 to 891 percent in the first quarter of 1977.

U.S. imports of knitting machine needles increased from 161 million needles in 1972 to 175 million needles in 1973. U.S. imports declined to 152 million needles and 105 million needles, respectively, in 1974 and 1975 before increasing to 126 million needles in 1976. Imports of knitting machine needles increased from 31 million needles in the first quarter of 1976 to 42 million needles in the first quarter of 1977.

The ratio of imported knitting machine needles to domestic production increased from 84 percent in 1972 to 104

I

percent, 115 percent, and 154 percent, respectively, in 1973, 1974, and 1975 before declining to 137 percent in 1976. The ratio of imports to domestic production increased from 119 percent in the first quarter of 1976 to 183 percent in the first quarter of 1977.

#### CONTRIBUTED IMPORTANTLY

A survey of customers purchasing knitting machine needles and sewing machine needles produced at the Excelsior plant of the Torrington Co. indicated that many customers have decreased purchases of needles from The Torrington Co. while increasing purchases of imported needles. These customers indicated that lower prices and in some cases superior quality influenced their decisions to switch to foreign sources.

#### CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that increases of imports like or directly competitive with sewing machine needles and knitting machine needles produced at the Excelsior plant of the Torrington Co. in Torrington, Conn., contributed importantly to the total or partial separation of the workers at that plant.

In accordance with the provisions of the Act, I make the following certification:

All employees at the Excelsior plant of The Torrington Co. in Torrington, Conn., who became totally or partially separated from employment on or after November 29, 1976, are eligible to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C., this 22d day of September 1977.

HARRY GRUBERT,  
Director, Office of  
Foreign Economic Research.

[TA-W-1812]

#### TYSON BEARING CO., MASSILLON, OHIO Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 the Department of Labor herein presents the results of TA-W-1812: Investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in section 222 of the Act.

The investigation was initiated on March 15, 1977, in response to a worker petition received on March 10, 1977, which was filed by the United Steelworkers of America on behalf of workers and former workers producing tapered roller bearings at the Massillon, Ohio, plant of Tyson Bearing Co.

The notice of investigation was published in the FEDERAL REGISTER on April 5, 1977 (42 FR 18155). No public hearing was requested and none was held.

The information upon which the determination was made was obtained

principally from officials of Tyson Bearing Co., its customers, the U.S. Department of Commerce, the U.S. International Trade Commission, industry analysts, and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Trade Act of 1974 must be met:

(1) That a significant number or proportion of the workers in such workers' firm, or an appropriate subdivision thereof, have become totally or partially separated, or are threatened to become totally or partially separated;

(2) That sales or production, or both, of such firm or subdivision have decreased absolutely;

(3) That articles like or directly competitive with those produced by the firm or subdivision are being imported in increased quantities, either actual or relative to domestic production; and

(4) That such increased imports have contributed importantly to the separations, or threat thereof, and to the decrease in sales or production. The term "contributed importantly" means a cause which is important but not necessarily more important than any other cause.

Without regard to whether any of the other criteria have been met, the investigation revealed that the fourth criterion has not been met.

The Department's investigation revealed that customers of Tyson Bearing Co. did not switch purchases to imported tapered roller bearings. Those customers that had reduced purchases from Tyson Bearing also reduced purchases of imports. The decline in employment at the Massillon plant in 1976 was primarily the result of a shift of certain production operations to the company's plant in Glasgow, Ky.

#### CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that increased imports like or directly competitive with the tapered roller bearings produced at the Massillon, Ohio, plant of Tyson Bearing Co., did not contribute importantly to the total or partial separation of workers at that plant.

Signed at Washington, D.C., this 20th day of September 1977.

GLORIA G. PRATT,  
Director, Office of  
Foreign Economic Policy.

#### [4510-23]

[TA-W-1562]

#### UNITED STATES STEEL CORP., HOMESTEAD WORKS, RANKIN, PA. Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 the Department of Labor herein presents the results of investigation regarding certification of eligibility to apply for worker adjustment

assistance as prescribed in section 222 of the Act.

The investigation was initiated on January 10, 1976, in response to a worker petition received on that date which was filed by the United Steelworkers of America on behalf of workers and former workers producing carbon steel plate, structural shapes and pilings at the Homestead Works, Rankin, Pa., of the U.S. Steel Corp., Pittsburgh, Pa.

The Notice of Investigation was published in the FEDERAL REGISTER on January 25, 1977 (42 FR 4562). No public hearing was requested and none was held.

The information upon which the determination was made was obtained principally from officials of U.S. Steel Corp., its customers, the American Iron and Steel Institute, the U.S. Department of Commerce, the U.S. International Trade Commission, industry analysts and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Trade Act of 1974 must be met:

(1) That a significant number or proportion of the workers in such workers' firm, or an appropriate subdivision of the firm have become totally or partially separated, or are threatened to become totally or partially separated;

(2) That sales or production, or both, of such firm or subdivision have decreased absolutely, and

(3) That articles like or directly competitive with those produced by the firm or subdivision are being imported in increased quantities, either actual or relative to domestic production; and

(4) That such increased imports have contributed importantly to the separation, or threat thereof, and to the decrease in sales or production. The term "contributed importantly" means a cause which is important but not necessarily more important than any other cause.

The investigation has revealed that all of the above criteria have been met.

#### SIGNIFICANT TOTAL OR PARTIAL SEPARATIONS

Employment of hourly production workers at the Rankin plant of the Homestead Works decreased 17.3 percent in 1975 compared to 1974 and 0.2 percent in 1976 compared to 1975. Employment decreased 13.4 percent in the first 11 months of 1976 compared to the same period of 1975. Employment in the last quarter of 1976 declined 20 percent from the previous quarter of that year.

#### SALES OR PRODUCTION, OR BOTH, HAVE DECREASED ABSOLUTELY

The Rankin plant produces basic steel of which approximately 95 percent is used by the Homestead plant of the Homestead Works to produce carbon steel plate, structural shapes and pilings. Total sales of the Homestead plant decreased 19.4 percent in 1975 compared to 1974 and 23.3 percent in the first 11 months of 1976 compared to the same period of 1975.

#### INCREASED IMPORTS

Imports of carbon steel plate decreased absolutely from 1,651,000 short tons in 1972 to 1,322,000 short tons in 1973, increased to 1,699,000 short tons in 1974, decreased to 1,353,000 short tons in 1975 and increased to 1,555,400 short tons in 1976. The ratio of imports to the domestic shipments of carbon steel plate decreased from 26.3 percent in 1972 to 16.4 percent in 1973 and increased to 18.8 percent in 1974, to 19.4 percent in 1975 and to 27.7 percent in 1976.

Imports of carbon steel structural shapes decreased absolutely from 1,614,000 short tons in 1972 to 1,250,700 short tons in 1973, increased to 1,142,700 short tons in 1974, decreased to 804,900 short tons in 1975 and increased to 1,351,400 short tons in 1976. The ratio of imports to domestic shipments of carbon steel structural shapes decreased from 34.1 percent in 1972 to 21.3 percent in 1973, to 19.7 percent in 1974, and to 19.5 percent in 1975 and increased to 40.0 percent in 1976.

Imports of carbon steel pilings decreased absolutely from 149,000 tons in 1973 to 112,000 tons in 1974, increased to 122,400 tons in 1975 and decreased to 103,700 tons in 1976. The ratio of imports to domestic shipments of carbon steel decreased from 31.3 percent in 1973 to 18.2 percent in 1974, increased to 31.0 percent in 1975 and to 34.8 percent in 1976.

#### CONTRIBUTED IMPORTANTLY

The U.S. Steel Corp. operates the Homestead Works which includes the Rankin, Pa., and Homestead, Pa., plants as an integrated production unit. Basic steel is produced at the Rankin plant and sent to the Homestead plant where carbon steel plate, structural shapes and pilings are produced.

A representative sample of customers who purchase carbon steel plate and structural shapes from the Homestead Works of U.S. Steel were surveyed. Many of these customers indicated that they had decreased purchases from the Homestead Works while increasing their purchases of imports.

#### CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that increases of imports like or directly competitive with carbon steel plate, structural shapes and pilings produced at Homestead Works of the U.S. Steel Corp. contributed importantly to the total or partial separations of the workers at the Rankin, Pa., plant. In accordance with the provisions of the Act, I make the following certification:

All workers at the Rankin, Pa., plant of the Homestead Works of the U.S. Steel Corp. who became totally or partially separated from employment on or after December 23, 1975, are eligible to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C., this 22d day of September 1977.

HARRY GRUBERT,  
Director, Office of  
Foreign Economic Research.

[TA-W-1439]

#### UNITED STATES STEEL CORP., HOMESTEAD WORKS, HOMESTEAD, PA. Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 the Department of Labor herein presents the results of investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in section 222 of the Act.

The investigation was initiated on December 15, 1976, in response to a worker petition received on December 15, 1976, which was filed by the United Steelworkers of America on behalf of workers and former workers producing carbon steel plate, structural shapes and pilings at the Homestead Works, Homestead, Pa., of the United States Steel Corp., Pittsburgh, Pa.

The Notice of Investigation was published in the FEDERAL REGISTER on January 4, 1977 (42 FR 900). No public hearing was requested and none was held.

The information upon which the determination was made was obtained principally from officials of United States Steel Corp., its customers, the American Iron and Steel Institute, the U.S. Department of Commerce, the U.S. International Trade Commission, industry analysts and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Trade Act must be met:

(1) That a significant number or proportion of the workers in such workers' firm, or an appropriate subdivision of the firm have become totally or partially separated, or are threatened to become totally or partially separated;

(2) That sales or production, or both, of such firm or subdivision have decreased absolutely, and

(3) That articles like or directly competitive with those produced by the firm or subdivision are being imported in increased quantities, either actual or relative to domestic production; and

(4) That such increased imports have contributed importantly to the separation, or threat thereof, and to the decrease in sales or production. The term "contributed importantly" means a cause which is important but not necessarily more important than any other cause.

The investigation has revealed that all of the above criteria have been met.

#### SIGNIFICANT TOTAL OR PARTIAL SEPARATIONS

Employment of hourly production workers engaged in employment related to the production of carbon steel plate decreased 14.7 percent in 1975 compared to 1974 and 7.3 percent in the first 11 months of 1976 compared to the same period of 1975.

Employment of hourly production workers engaged in employment related to the production of carbon steel structural shapes decreased 20.2 percent in 1975 compared to 1974 and 9.3 percent in the first 11 months of 1976 compared to the same period of 1975.

Employment of hourly production workers engaged in the production of carbon steel pilings decreased 11.7 percent in 1975 compared to 1974 and 7.7 percent in the first 11 months of 1976 compared to the same period of 1975.

#### SALES OR PRODUCTION, OR BOTH HAVE DECREASED ABSOLUTELY

Sales of carbon steel plate decreased 17.6 percent in 1975 compared to 1974 and 22.9 percent in the first 11 months of 1976 compared to the same period of 1975.

Sales of carbon steel structural shapes decreased 23.6 percent in 1975 compared to 1974 and 24.7 percent in the first 11 months of 1976 compared to the same period of 1975.

Sales of carbon steel pilings decreased 12.4 percent in 1975 compared to 1974 and 23.4 percent in the first 11 months of 1976 compared to the same period of 1975.

#### INCREASED IMPORTS

Imports of carbon steel plate decreased absolutely from 1,651,000 short tons in 1972 to 1,322,000 short tons in 1973, increased to 1,699,000 short tons in 1974, decreased to 1,353,000 short tons in 1975 and increased to 1,555,400 short tons in 1976. The ratio of imports to the domestic shipments of carbon steel plate decreased from 26.3 percent in 1972 to 16.4 percent in 1973 and increased to 18.8 percent in 1974, to 19.4 percent in 1975 and to 27.7 percent in 1976.

Imports of carbon steel structural shapes decreased absolutely from 1,614,000 short tons in 1972 to 1,250,700 short tons in 1973, increased to 1,142,700 short tons in 1974, decreased to 804,900 short tons in 1975 and increased to 1,351,400 short tons in 1976. The ratio of imports to domestic shipments of carbon steel structural shapes decreased from 34.1 percent in 1972 to 21.3 percent in 1973, to 19.7 percent in 1974, and to 19.5 percent in 1975 and increased to 40.0 percent in 1976.

Imports of carbon steel pilings decreased absolutely from 149,000 tons in 1973 to 112,000 tons in 1974, increased to 122,400 tons in 1975 and decreased to 103,700 tons in 1976. The ratio of imports to domestic shipments of carbon steel

pillings decreased from 31.3 percent in 1973 to 18.2 percent in 1974, increased to 31.0 percent in 1975 and to 34.8 percent in 1976.

#### CONTRIBUTED IMPORTANTLY

The United States Steel Corp. operates the Homestead Works which includes the Rankin, Pa., and Homestead, Pa., plants as an integrated production unit. Basic steel is produced at the Rankin plant and sent to the Homestead plant where carbon steel plate, structural shapes and pilings are produced. A representative sample of customers who purchase carbon steel plate and structural shapes from the Homestead Works of United States Steel were surveyed. Many of these customers indicated that they had decreased purchases from the Homestead Works while increasing their purchases of imports.

#### CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that increases of imports like or directly competitive with carbon steel plate, structural shapes and pilings produced at the Homestead Works of the United States Steel Corp. contributed importantly to the absolute decline in sales and to the total or partial separations of the workers at the Homestead, Pa. plant. In accordance with the provisions of the Act, I make the following certification:

All workers engaged in employment related to the production of carbon steel plate, structural shapes and pilings at the Homestead, Pa., plant of the Homestead Works of the United States Steel Corp., who became totally or partially separated from employment on or after November 15, 1975, are eligible to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C., this 22d day of September 1977.

HARRY GRUBERT,  
Director, Office of  
Foreign Economic Research.

#### [4510-23]

[TA-W-1561]

#### UNITED STATES STEEL CORP., DULUTH, MINN.

#### Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 the Department of Labor herein presents the results of TA-W-1561: Investigation regarding certification of eligibility to apply for worker adjustment assistance as prescribed in section 222 of the Act.

The investigation was initiated on January 10, 1977, in response to a worker petition received on January 10, 1977, which was filed on behalf of workers and former workers producing metallurgical coke at the Duluth Works of United States Steel Corp., Duluth, Minn.

The Notice of Investigation was published in the *FEDERAL REGISTER* (42 FR 4562) on January 25, 1977. No public hearing was requested and none was held.

The information upon which the determination was made was obtained principally from officials of United States Steel Corp., its customers, the U.S. International Trade Commission, the U.S. Department of Commerce, industry analysts, and Department files.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Trade Act of 1974 must be met:

- (1) That a significant number or proportion of the workers in the workers' firm, or an appropriate subdivision thereof, have become totally or partially separated, or are threatened to become totally or partially separated;
- (2) That sales or production, or both, of such firm or subdivision have decreased absolutely;
- (3) That articles like or directly competitive with those produced by the firm or subdivision are being imported in increased quantities, either actual or relative to domestic production; and
- (4) That such increased imports have contributed importantly to the separations, or threat thereof, and to the decreases in sales or production. The term "contributed importantly" means a cause which is important but not necessarily more important than any other cause.

The investigation has revealed that all of the above criteria have been met.

#### SIGNIFICANT TOTAL OR PARTIAL SEPARATIONS

The average number of production workers at the Duluth Works declined 4.2 percent from 1974 to 1975 and declined 5.8 percent from 1975 to 1976.

Average weekly hours declined 12.4 percent from 1974 to 1975 and declined 3.1 percent from 1975 to 1976.

#### SALES OR PRODUCTION, OR BOTH, HAVE DECREASED ABSOLUTELY

Production of coke at the Duluth Works declined 22.1 percent from 1974 to 1975 and declined 18.7 percent from 1975 to 1976. Production of coke at the Duluth Works is an earlier stage of an integrated steelmaking production process at United States Steel's South Works in Chicago, Ill., and United States Steel's Gary Works in Gary, Ind. Coke production at the Duluth Works is directly dependent on demand generated by steel production at the South Works and the Gary Works.

#### INCREASED IMPORTS

Imports, either absolutely or relative to domestic shipments of products like or directly competitive with products produced at United States Steel's South Works and Gary Works increased in 1976 compared to 1975.

Workers engaged in the production of these products at these plants have been certified eligible to apply for trade ad-

justment assistance (see TA-W-1433, South Works and TA-W-1438, Gary Works).

#### CONTRIBUTED IMPORTANTLY

Customers who purchased those same products indicated that they have decreased purchases from the South Works and the Gary Works and increased purchases of imported products.

#### CONCLUSION

After careful review of the facts obtained in the investigation, I conclude that increases of imports of articles like or directly competitive with previously certified steel products produced by United States Steel Corp.'s South Works and Gary Works contributed importantly to the total or partial separations of the workers at the Duluth Works of United States Steel. In accordance with the provisions of the Act, I make the following certification:

All workers at the Duluth Works of United States Steel Corp., Duluth, Minn., who became totally or partially separated from employment on or after December 23, 1975, be certified as eligible to apply for adjustment assistance under Title II, Chapter 2, of the Trade Act of 1974.

Signed at Washington, D.C., this 19th day of September 1977.

JAMES F. TAYLOR,  
Director, Office of Management,  
Administration, and Planning.

#### LEGAL SERVICES CORPORATION GRANTS AND CONTRACTS

Legal Aid Services, Casper, Wyo.

SEPTEMBER 26, 1977.

The Legal Services Corporation was established pursuant to the Legal Services Corporation Act of 1974, Pub. L. 93-355, 88 Stat. 378, 42 U.S.C. 2996-2996f. Section 1007(f) provides:

At least thirty days prior to the approval of any grant application or prior to entering into a contract or prior to the initiation of any other project, the Corporation shall announce publicly, and shall notify the Governor and the State Bar Association of any State where legal assistance will thereby be initiated, of such grant, contract, or project . . .

The Legal Services Corporation hereby announces publicly that it is considering the grant application submitted by:

Legal Aid Services, Casper, Wyo., to serve the counties of Johnson and Sheridan.

Interested persons are hereby invited to submit written comments or recommendations concerning the above application to the Regional Office of the Legal Services Corporation at:

Seattle Regional Office, 506 Second Avenue, Seattle, Wash., 98104.

THOMAS EHRLICH,  
President.

#### NATIONAL SCIENCE FOUNDATION ADVISORY PANEL FOR OCEANOGRAPHY PROJECT SUPPORT

#### Meeting

In accordance with the Federal Advisory Committee Act, as amended, Pub. L. 92-463, the National Science Foundation announces the following meeting:

Name: Advisory Panel for Oceanography Project Support.

Date and time: October 17 and 18, 1977, 9 a.m. to 6 p.m. each day.

Place: Rooms 628 and 1114, National Science Foundation, 1800 G St., NW., Washington, D.C.

Type of meeting: Closed.

Contact person: Dr. Robert E. Wall, Head, Oceanography Section, Room 611, National Science Foundation, Washington, D.C. 20550, telephone (202-632-4227).

Purpose of panel: To provide advice and recommendations concerning support for research in Oceanography.

Agenda: To review and evaluate research proposals as part of the section process for awards.

Reason for closing: The proposals being reviewed include information of a proprietary or confidential nature, including technical information; financial data, such as salaries, and personal information concerning individuals associated with the proposals. These matters are within exemptions (4) and (6) of U.S.C. 552b(c), Government in the Sunshine Act.

Authority to close meeting: This determination was made by the Committee Management Officer pursuant to provisions of Section 10(d) of Pub. L. 92-463. The Committee Management Officer was delegated the authority to make such determinations by the Acting Director, NSF, on February 18, 1977.

M. REBECCA WINKLER,  
Acting Committee  
Management Officer.

#### Meeting

Name: Subcommittee for Cell Biology of the Advisory Committee for Physiology, Cellular and Molecular Biology.

Date and time: October 20, 21, and 22, 1977—9 a.m. to 6 p.m.

Place: Room 1114, National Science Foundation, 1800 G Street, NW., Washington, D.C. 20550.

Type of meeting: Closed.

Contact person: Dr. Gertrude Kasbekar, Assistant Program Director for Cell Biology, room 326, National Science Foundation, Washington, D.C. 20550, telephone (202-632-4200).

Purpose of subcommittee: To provide advice and recommendations concerning support for research in cell biology.

Agenda: To review and evaluate research proposals as part of the selection process for awards.

Reason for closing: The proposals being reviewed include information of a proprietary or confidential nature, including technical information; financial data, such as salaries and personal information concerning individuals associated with the proposals. These matters are within exemptions (4) and (6) of 5 U.S.C. 552b(c), Government in the Sunshine Act.

Authority to close meeting: This determination was made by the Committee Management Officer pursuant to provisions of Section 10(d) of Pub. L. 92-463. The Committee Management Officer was delegated the authority to make such determinations by the Acting Director, NSF, on February 18, 1977.

M. REBECCA WINKLER,  
Acting Committee  
Management Officer.

SEPTEMBER 27, 1977.

#### DEPARTMENT OF THE TREASURY Office of the Secretary LIST OF COUNTRIES REQUIRING COOP- ERATION WITH AN INTERNATIONAL BOYCOTT

In order to comply with the mandate of section 999(a)(3) of the Internal

Revenue Code of 1954, the Department of Treasury is publishing a current list of countries which may require participation in, or cooperation with, an international boycott (within the meaning of section 999(b)(3) of the Internal Revenue Code of 1954). This list is the same as the list published in the July 1, 1977, *FEDERAL REGISTER*.

On the basis of the best information currently available to the Department of the Treasury, the following countries may require participation in, or cooperation with, an international boycott (within the meaning of section 999(b)(3) of the Internal Revenue Code of 1954).

Bahrain  
Egypt  
Iraq  
Jordan  
Kuwait  
Lebanon  
Libya  
Oman  
Qatar  
Saudi Arabia  
Syria  
United Arab Emirates  
Yemen Arab Republic  
Yemen, Peoples Democratic Republic of

Dated: September 27, 1977.

LAURENCE N. WOODWORTH,  
Assistant Secretary,  
(Tax Policy).

#### [4710]

#### NATIONAL COMMISSION ON THE OB- SERVANCE OF INTERNATIONAL WOMEN'S YEAR

#### DELEGATE TO NATIONAL WOMEN'S CON- FERENCE SELECTED AT STATE MEET- INGS

#### Notice of Certification of Delegates and Alternates

Pursuant to section 6(c)(1) of Pub. L. 94-167, each State Meeting held in preparation for the National Women's Conference has selected representatives to the Conference in accordance with regulations promulgated by the National Commission on the Observance of International Women's Year in Title 45 CFR, Chapter XIX (42 FR 11012 and 42 FR 16410).

On July 22, 1977, a notice was published in the *FEDERAL REGISTER* (42 FR 37607) that the Commission would receive documentation which related to the validity of the elections held at the State Meeting. The Commission has reviewed all the materials bearing on the elections which have been submitted to it and hereby gives notice that the following delegates have been duly certified as the elected representatives and alternates from their respective State Meetings to the National Women's Conference:

**NATIONAL FOUNDATION ON THE  
ARTS AND THE HUMANITIES  
ADVISORY COMMITTEE RESEARCH  
GRANTS PANEL**

**Meeting**

SEPTEMBER 26, 1977.

Pursuant to the provisions of the Federal Advisory Committee Act (Pub. L. 92-463, as amended), notice is hereby given that a meeting of the Research Grants Panel will be held at 806 15th Street, NW., Washington, D.C. 20506, in room 1023, from 9 a.m. to 5:30 p.m. on October 21, 1977.

The purpose of the meeting is to review General Research applications in the field of the General Humanities submitted to the National Endowment for the Humanities for projects beginning after October 1, 1978.

Because the proposed meeting will consider financial information and disclose information of a personal nature the disclosure of which would constitute a clearly unwarranted invasion of personal privacy, pursuant to authority granted me by the Acting Chairman's Delegation of Authority to Close Advisory Committee Meetings, dated August 2, 1977, I have determined that the meeting would fall within exemptions (4) and (6) of 5 U.S.C. 552b(c) and that it is essential to close the meeting to protect the free exchange of internal views and to avoid interference with operation of the Committee.

It is suggested that those desiring more specific information contact the Advisory Committee Management Officer, Mr. Stephen J. McCleary, 806 15th Street, NW., Washington, D.C. 20506, or call area code 202-724-0367.

STEPHEN J. MCCLEARY,  
Advisory Committee  
Management Officer.

**ADVISORY COMMITTEE RESEARCH  
GRANTS PANEL**

**Meeting**

SEPTEMBER 22, 1977.

Pursuant to the provisions of the Federal Advisory Committee Act (Pub. L. 92-463, as amended), notice is hereby given that a meeting of the Research Grants Panel will be held at 806 15th Street, NW., Washington, D.C. 20506, in room 1130, from 9 a.m. to 5:30 p.m. on October 20 and 21, 1977.

The purpose of the meeting is to review the computer methodology of applications submitted to the National En-

dowment for the Humanities for projects beginning after April 1, 1978.

Because the proposed meeting will consider financial information and disclose information of a personal nature the disclosure of which would constitute a clearly unwarranted invasion of personal privacy, pursuant to authority granted me by the Acting Chairman's Delegation of Authority to Close Advisory Committee Meetings, dated August 2, 1977, I have determined that the meeting would fall within exemptions (4) and (6) of 5 U.S.C. 552b(c) and that it is essential to close the meeting to protect the free exchange of internal views and to avoid interference with operation of the Committee.

It is suggested that those desiring more specific information contact the Advisory Committee Management Officer, Mr. Stephen J. McCleary, 806 15th Street, NW., Washington, D.C. 20506, or call area code 202-724-0367.

STEPHEN J. MCCLEARY,  
Advisory Committee  
Management Officer.

##### WATER RESOURCES COUNCIL GUIDANCE FOR FLOODPLAIN MANAGEMENT

AGENCY: Water Resources Council.

ACTION: Publication of guidance.

SUMMARY: This guidance describes procedures for obtaining necessary information and determining whether a proposed action will occur on a floodplain and is issued in accord with section 2(a) (1), Executive Order 11988, dated May 24, 1977.

EFFECTIVE DATE: October 1, 1977.

#### FOR FURTHER INFORMATION CONTACT:

Frank H. Thomas, Floodplain Management Specialist, Policy Division, U.S. Water Resources Council, 2120 L Street NW., Washington, D.C. 20037. Phone 202-254-6352.

SUPPLEMENTARY INFORMATION: Section 2(d) of Executive Order 11988—Floodplain Management requires each agency to issue or amend existing regulations and procedures by May 23, 1978. The guidance provided in this notice is intended to assist the agencies in complying with this requirement.

Dated: September 28, 1977

LEO M. EISEL,  
Director.

#### INTRODUCTION

This guidance is issued to Federal agencies in accordance with section 2(a) (1) of the May 24, 1977, Executive Order—11988—"Floodplain Management" (Appendix C), which requires that before taking an action, a Federal agency shall determine whether the proposed action will occur in a floodplain. It is part of broader guidelines being drafted by the U.S. Water Resources Council (WRC) to aid Federal agencies in preparing their own procedures for implementing the policies and requirements of hold a public meeting at 9 a.m., Friday, November 4, 1977, at R&D Tower Building the Executive Order in the context of the "Unified National Program for Flood Plain Management", approved May 1976 by WRC.

The new Executive Order replaces the 1968 Executive Order 11296—Flood Hazard Evaluation—expanding its purposes to avoid environmental harm and placing greater responsibility on the heads of Federal agencies. It also requires that Federal agency actions affecting Federal real property and facilities in floodplains be consistent with the intent of the National Flood Insurance Program, and the "Unified National Program for Flood Plain Management".

Specifically, the purpose of Executive Order 11988 is "to avoid to the extent possible the long and short term adverse impacts associated with the occupancy and modification of floodplains and to avoid direct or indirect support of floodplain development wherever there is a practicable alternative." It calls on each agency to provide leadership and to take action "to reduce the risk of flood loss, to minimize the impact of floods on human safety, health and welfare, and to restore and preserve the natural and beneficial values served by floodplains in carrying out its responsibilities for (1) acquiring, managing, and disposing of Federal lands and facilities; (2) pro-

viding federally undertaken, financed, or assisted construction and improvements; and (3) conducting Federal activities and programs affecting land use, including but not limited to water and related land resources planning, regulating, and licensing activities." It requires each agency "to evaluate the potential effects of any actions it may take in a floodplain; to ensure that its planning programs and budget requests reflect consideration of flood hazards and floodplain management; and to prescribe procedures to implement the policies and requirements" of the Order. Even when the functional nature of a proposed facility such as a dock, bridge footing, flood modifying structure, or type of activity routinely requires a floodplain location, agency procedures will detail measures to be taken in compliance with the Executive Order. (NOTE.—Section 2(d) requires that each agency issue or amend existing regulations and procedures to comply with the Order by May 23, 1978.)

#### FLOODPLAINS: AREAS OF CONCERN

The first step in responding to the Executive Order is to determine if a proposed action would take place in a floodplain. Floodplains are relatively flat areas adjoining inland and coastal (mainland and island) waters that have been or could be flooded according to the definitions now widely used in floodplain management. These are areas of natural hazard for human use and occupancy. They are also areas of natural and beneficial values. Both concerns must be recognized.

Floods follow no predictable pattern of frequency or magnitude. Most people do not fully appreciate the force of a flood, its depth and velocity, nor the attendant economic, health and safety aspects of flood debris and pollution. Furthermore, the more frequently flooded, low-lying portions of floodplains have important natural values, notably in wetlands associated with the interface between land and water which are so productive of animal and plant life. (Protection of Order Number 11990.)

For purposes of Executive Order 11988, all agency heads will be concerned, at a minimum, with the floodplain area which would be inundated by a flood having a one percent chance of occurring in any year—the so-called "100-year flood"—because they must support any decision to conduct, support, or allow an action (i.e., "structure," "facility" or "activity") to be located within this area. The pictorial glossary (Figure 1) depicts and defines the 100-year floodplain and other portions of floodplains. The 100-year floodplain is delineated by Zone A on the examples of flood insurance maps shown in Appendix A.

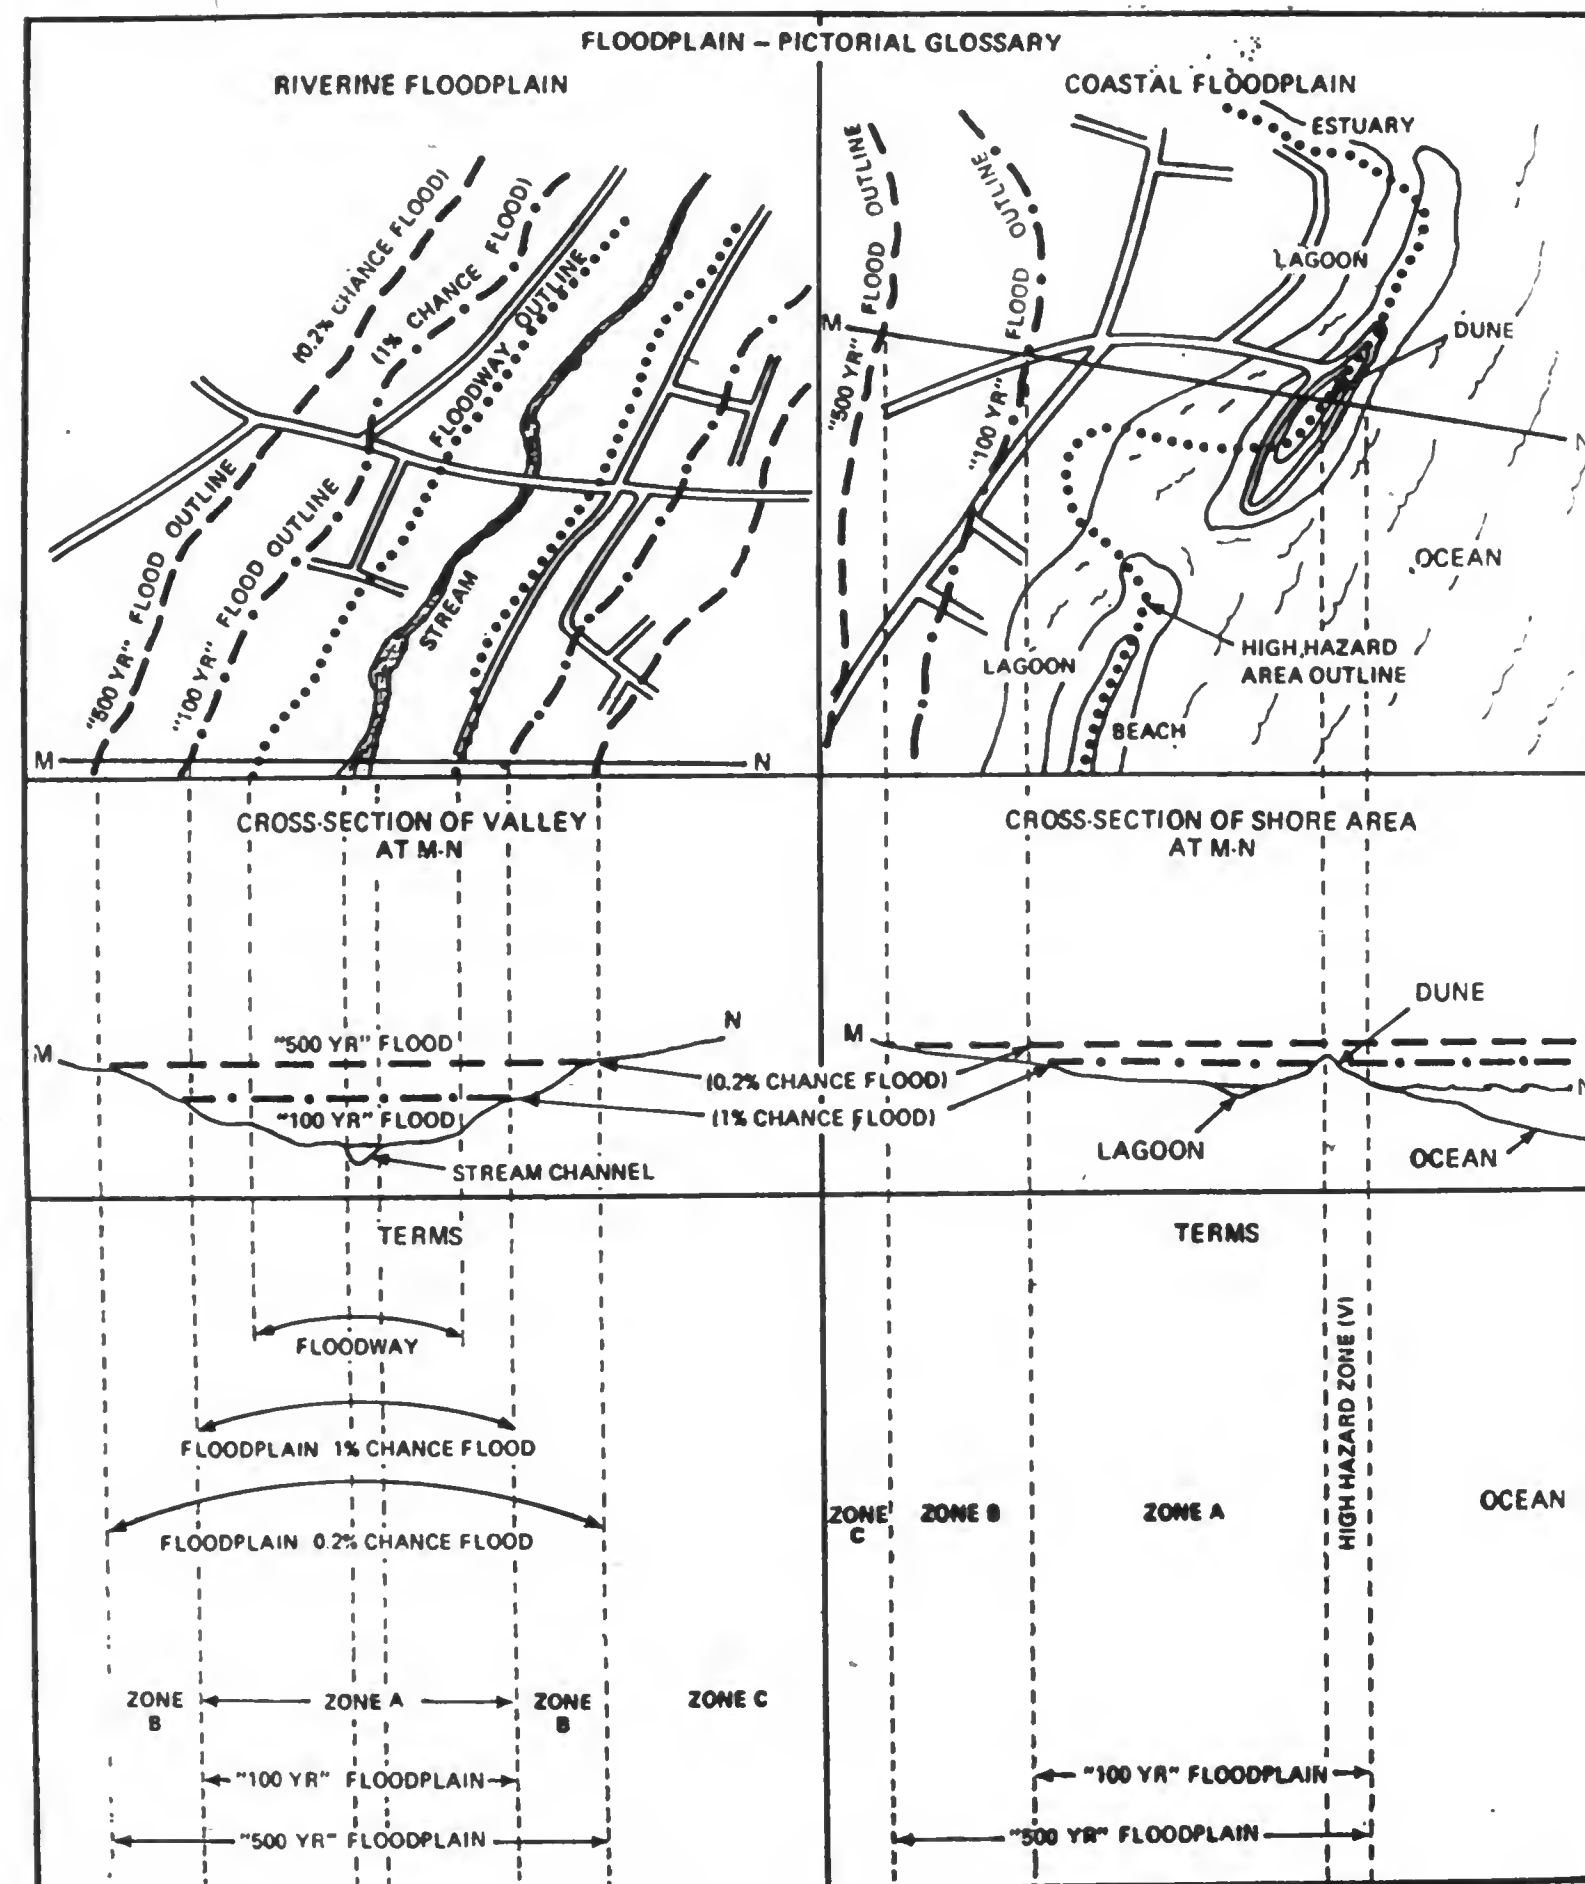

Figure 1

Within the 100-year floodplain, extreme hazard is associated with those portions of riverine and coastal floodplains nearest to flood sources, where depths and velocities of flood waters are greatest. These areas are usually referred to as a "floodway" and "coastal high hazard area", and with few exceptions, are locations to be avoided. These are the floodplain areas where flooding is not only most frequent and damaging, but where the environmental values of land and water interface are at their maximum.

In addition, agency heads should consider the implications of the occurrence of a flood larger than the 100-year flood on the economics and safety of a proposed floodplain use. If a proposed use would be especially dangerous when exposed to larger floods, consideration must be given to the larger floodplain area. Herein, such larger floodplains are identified as those of a flood with a 0.2 percent chance of occurring in any year—the so-called "500-year flood"—shown as Zone B on the Flood Insurance Rate Maps issued by the Federal Insurance Administration. Larger floods are used to delineate floodplains in flood hazard studies by other agencies. Examples are the Standard Project Flood used in U.S. Army Corps of Engineers' studies and the Maximum Probable Flood used in TVA studies, which are computed from basin runoff potentials rather than through statistical analysis of flow frequencies.

In summary, the key question is: How does the agency decisionmaker ascertain if his decision involves a floodplain location, particularly a site within the floodplain of the one percent chance flood?

#### PROCEDURES FOR DETERMINING A FLOODPLAIN LOCATION

The Order states that "this determination shall be made according to a Department of Housing and Urban Development (HUD) Flood Insurance Map or a more detailed map of an area, if available." However, recognizing that these maps are the best available, two cautions are suggested in utilizing flood insurance maps: (1) Flood insurance maps generally do not delineate portions of the floodplain less than 200' wide where headwater flooding may be a concern, and (2) possible adverse consequences from future urbanization are difficult to infer from the maps. Thus, technical assistance may be desirable for interpreting flood insurance maps. In addition, decisionmakers seeking flood insurance maps may find them unavailable for areas of extensive public land holdings.

The following is a guide for obtaining the floodplain information needed to make a determination.

**Areas of Predominantly Private Land Ownership.** If a decision involves a publicly or privately-owned site within an area of predominantly private ownership, a map showing the flood hazard areas will usually be available from the

National Flood Insurance Program administered by the Federal Insurance Administration (FIA), HUD. Detailed maps showing the elevations and boundaries of the "100-Year" (Zones A and V) and "500-year" (Zone B) floodplains are known as "Flood Insurance Rate Maps" (FIRM). A sample is shown on page A-1. Such maps have been published by the FIA for over 1,200 communities and maps for more communities continue to be published for FIA's program to provide maps of all flood prone areas by 1983. Many of the communities which have a FIRM also have a Flood Insurance Study (FIS) Report containing detailed flood information. Some 13,000 less detailed maps showing the approximate area of the 100-year (Zone A) floodplain are available for most of the remaining communities. These are called "Flood Hazard Boundary Maps" (FHBM). A sample is shown on page A-2. Similar information, some very detailed, is also available from the agencies described in Appendix B.

The search for information should follow the sequence below. (Refer to summary diagram preceding Appendix A.)

The detailed map (FIRM) or the Flood Insurance Study (FIS) should be consulted first. Information on how to request single maps, FIS reports, and how to be placed on the FIA mailing list to receive new or revised FIRM's, FHBM's, and FIS reports is detailed on pages B-3 and B-4.

If a detailed map (FIRM) is not available—obtain an approximate boundary map (FHBM) from the same source as in the preceding step. If the proposed site is at or near the 100-year flood boundary, or if data on flood elevations are needed, or if the map does not delineate the flood hazard boundaries in the vicinity of the proposed site—seek detailed information and assistance from the agencies listed on page B-1. (There are additional agencies with professional competence not listed on page B-1 which can perform their own floodplain studies when needed.)

If an approximate boundary map (FHBM) is not available or if the map does not delineate the flood hazard boundaries in the vicinity of the proposed site—seek detailed information and assistance from the agencies listed on page B-1.

If the agencies listed do not have or know of detailed information and are unable to assist in determining whether or not the proposed site is in the floodplain—seek the services of a licensed consulting engineer experienced in this type of work. The quality of information obtained from the consulting engineer must be comparable to that required of flood insurance study contractors for the FIA. Experienced consulting engineers may be suggested by the agencies listed on page B-1.

**Areas of predominantly Federal and State land holdings.** If a decision involves an area or location within extensive Federal or State holdings, it is unlikely that

V 4 2 1 1 9 0 S E P 3 0 7 7

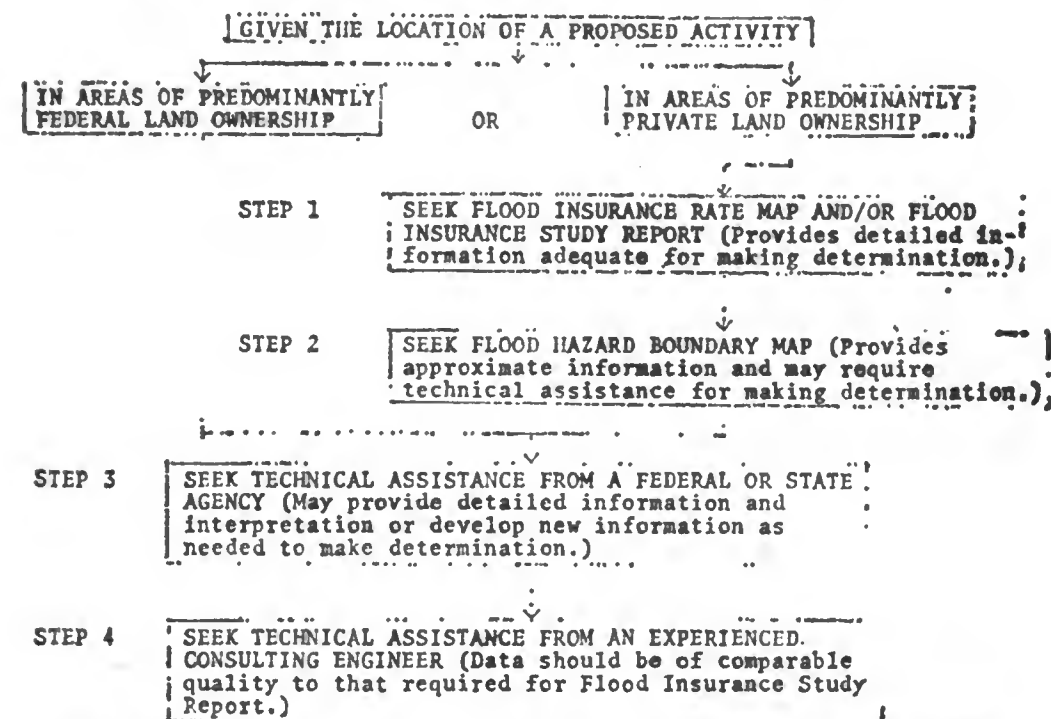

FIS reports and FIRM or FIRM maps would be available. In this event, information should be sought from the land administering agency before information and/or assistance is sought from the agencies listed on page B-1. If none of these agencies have information or can provide assistance, the services of an experienced consulting engineer should be sought as described above.

Additional guidance for developing agency procedures. The Water Resources

Council is drafting more comprehensive guidelines detailing procedures for use by all agencies in taking actions to minimize harm from flooding and to restore and preserve the natural and beneficial values of floodplains, as required by Executive Order 11988. These guidelines are intended to assist Federal agencies in preparing their own procedures and regulations and will be available from the Council.

#### GUIDANCE FOR DETERMINING WHETHER A PROPOSED ACTION IS LOCATED IN A FLOODPLAIN

Summary of Search Procedure for Obtaining Necessary Information  
(Proceed through steps only as far as needed.)

One of the requirements of Executive Order 11988--Floodplain Management is that all Federal agencies before taking an action, determine if the proposed activity is located on a floodplain. The above steps are provided as the most efficient means for obtaining information of adequate quality. If a location is determined to be inside the floodplain, further action is required by the Executive Order. Guidance for meeting these requirements and for developing required agency procedures can be obtained from the Water Resources Council.

States and regional agencies	Varies from State to State		

NOTE.—See following pages for detailed description of  
assistance and information available from each agency.

## FLOODPLAIN SERVICES

### AVAILABLE FROM LISTED AGENCIES

#### DEPARTMENT OF AGRICULTURE

**Soil Conservation Service (SCS).** As part of the SCS's Floodplain Management Assistance Program each State Conservationist carries out cooperative Flood Hazard Analyses upon request of local governments, in accordance with a Joint Coordination Agreement with the responsible State agency. SCS flood hazard reports contain floodplain delineations on aerial photomaps, flood profiles, and discharge and floodway data. In addition, SCS provides continuing technical assistance to local governments, after completion of a flood hazard or insurance study, to help them implement their local floodplain management program. Each SCS State Office has additional flood elevation and related floodplain data on file from Watershed Project and Resource and Conservation Development Project Investigations, River Basins Surveys, and detailed Soil Surveys. If the State or field office address is not known contact: Chief, Floodplain Management and Special Projects Branch, River Basins Division, SCS, P.O. Box 2890, Washington, D.C. 20013; telephone 202-447-7697.

#### DEPARTMENT OF THE ARMY

**Corps of Engineers.** 47 field office locations maintain a file of floodplain information, survey, and other reports containing floodplain delineations, flood profiles, and data on flood discharges and hydrographs. Each office (1) provides interpretations as to flood depths, velocities, and durations from existing data; (2) develops new data through field and hydrologic studies for interpretation; and (3) provides guidance on adjust-

ments to minimize the adverse effects of floods and floodplain development. If field office address is not known contact Chief, Floodplain Management Services, U.S. Army and Independence Avenue SW, Washington, D.C. 20314, telephone 202-693-1691.

#### DEPARTMENT OF COMMERCE

**NOAA-National Weather Service.** Floodplain information and interpretative assistance for specific points on larger rivers of the United States can be obtained from the regional hydrologist at five National Weather Service Regional Offices. Information available consists of the flood stage for selected communities (the stage above which flood damage occurs), and historical flood information for that location. An annual publication entitled "River Forecasts Provided by the National Weather Service," lists the points for which data are compiled and includes the flood stage at each point and the current year's maximum stage as well as the maximum stage of record. This publication is for sale by the National Climatic Center of NOAA, Asheville, N.C. 28801. The National Weather Service also maintains a Flash Flood program which provides flood forecasts and warnings and assist interested communities in establishing Flash Flood Warning System. For information and assistance contact the Regional Hydrologist, National Weather Service: Eastern Region—Garden City, N.Y.; Southern Region—Fort Worth, Tex.; Central Region—Kansas City, Mo.; Western Region—Salt Lake City, Utah; Alaska Region—Anchorage, Alaska; and Regional Director, National Weather Service, Honolulu, Hawaii.

#### DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

**Federal Housing Administration.** The civil engineer at the 78 local or regional offices has specific knowledge of flood elevations for many urban locations and can provide knowledge of material available to assist in making a determination of a floodplain location. The location of the nearest office may be obtained from one of HUD's 10 regional offices or by contracting: Federal Housing Administration, 451 7th Street SW, Washington, D.C. 20410, telephone 202-755-5111.

**Federal Insurance Administration.** Request for insurance maps or studies should be addressed as follows:

(1) **FIA mailing list.** Copies of new or revised FHB's, FIRM's, and FIS's reports are distributed upon publication to organizations on the FIA mailing list. In requesting to be added to the mailing list, the agency should specify the number and distribution of maps required (for example, two copies of each map for Maine and New Hampshire communities to Boston regional office). Mailing list inquiries should be sent to:

Engineering Division, Federal Insurance Administration, Room 5150, HUD Building, 451 7th Street SW, Washington, D.C. 20410 (202-755-7510).

(2) **Requests for a single map.** Requests for a previously published FHB or FIRM or a single copy of FHB or FIRM may be made by calling FIA's toll free number: 800-424-8872.

(3) **Flood insurance study reports.** These detailed engineering reports are distributed to those on the mailing list when a FIRM is initially published. However, because there has not been a recurring demand for this information, FIA does not have a system for supplying copies to interested organizations at a later date. Copies are available at: (1) FIA's Engineering Division (address above); (2) FIA Regional Offices (see list below); and (3) Chief, Executive Officer of

the local community within which the action is proposed to be carried out.

Region I—Boston, 617-223-2616.  
Region II—New York, 212-264-4734.  
Region III—Philadelphia, 215-597-9581.  
Region IV—Atlanta, 404-257-2391.  
Region V—Chicago, 312-353-0757.  
Region VI—Dallas, 214-749-7412.  
Region VII—Kansas City, 816-374-2161.  
Region VIII—Denver, 303-637-5041.  
Region IX—San Francisco, 415-556-3543.  
Region X—Seattle, 206-442-1026.

Requests for floodplain management services, and a list of experienced consulting engineers may be obtained from the Director, Floodplain Management Division, Federal Insurance Administration, 451 7th Street SW, Washington, D.C. 20410, telephone 202-426-1691.

#### DEPARTMENT OF THE INTERIOR

**Geological Survey.** User Assistance Centers at 48 locations can provide (a) factual information on flood peaks and discharges, flood depths and velocities, profiles of the water surface during major floods, areas inundated during major floods, time-of-travel of floodwave, and sediment transport data; (b) interpretive information regarding flood-frequency relations, estimates of 10-, 50-, 100-, and 500-years flood discharges, computed water surface profiles, and flood-prone areas delineated on topographic maps, with known flood problems; and (c) assistance in minimizing flood losses by quickly identifying areas of potential flood hazards. If the User Assistance Center address is not known, contact: Chief, Surface Water Branch, Water Resources Division, U.S. Geological Survey, National Center, Reston, Va. 22092, telephone 703-860-6837.

**Bureau of Land Management.** The Bureau of Land Management (BLM) has District Offices located in the 11 Western States and Alaska involved in land use planning for public lands. Floodplain protection and flood prevention is a significant element in the BLM planning system, and each District Office maintains a file of existing floodplain maps which are available for public inspection. If the location of the district office is not known, contact: Bureau of Land Management, U.S. Department of the Interior, 18th and O Streets NW, Washington, D.C. 20240, telephone 202-343-5441.

**Bureau of Reclamation.** The flood hydrologist at the seven regional offices has knowledge of flooding and flood elevation for related locations associated with Bureau projects and can provide interpretive assistance for existing data. For information contact one of the seven regional or nearby project offices or the Flood Hydrology Section, U.S. Bureau of Reclamation, P.O. Box 25007, Denver Federal Center, Denver, Colo. 80225, telephone 303-234-2035.

#### TENNESSEE VALLEY AUTHORITY

Activities in water resources are confined to portions of the seven States in the Tennessee Valley Watershed. Since 1953, TVA has conducted a program of floodplain management assistance to local governments. Reports have been published for more than 100 communities, and have provided profiles and flood data to at least 70 others. Information in files pertains to large floods which have occurred in the Valley since the 1930's and in less detail dating back to the large flood of 1876. TVA's Floodplain Management Services Staff provides technical assistance to those who propose developments in floodplains to help prevent unwise actions. Contact: Floodplain Management Services, 100 Liberty Building, Tennessee Valley Author-

ity, Knoxville, Tenn. 37902, Telephone 615-632-4451.

#### DELAWARE RIVER BASIN COMMISSION

The Commission maintains a file of floodplain information, delineation and flood data studies prepared by the Commission, Federal agencies and others. Where data exist, assistance with interpretation will be provided. Contact: Head, Branch of Operations, Delaware River Basin Commission, P.O. Box 7360, West Trenton, N.J. 08628, telephone 609-883-9500.

#### SUSQUEHANNA RIVER BASIN COMMISSION

The Commission maintains a file of detailed hydrologic and hydraulic information for 245 communities throughout the Basin studies under the National Flood Insurance Program for HUD. Limited additional hydrological data for other areas is available. The Commission can provide general information and guidance on floodplain management measures. Contact: Chief, Planning and Operations, Susquehanna River Basin Commission, 5012 Lenker Street, Mechanicsburg, Pa. 17055, telephone 717-737-0504.

#### STATES

Many (but not all) States have active floodplain management programs. They have on file or access to most floodplain information generated by Federal and State agencies, regional organizations, special districts, and private consultants. State agencies are usually staffed and funded to (1) coordinate all floodplain management activities; (2) develop minimum standards for floodplain regulations; (3) assist local units of government (counties, cities, etc.) in developing floodplain management programs; and (4) interpret available floodplain information. For most States, the appropriate contact is the Department of Natural Resources or the Water Resources Division. At the substrate level, regional agencies such as conservancy districts and multicounty planning agencies may be a source of floodplain data and interpretation.

#### APPENDIX C

#### THE WHITE HOUSE, EXECUTIVE ORDER 11888, FLOODPLAIN MANAGEMENT

By virtue of the authority vested in me by the Constitution and statutes of the United States of America, and as President of the United States of America, in furtherance of the National Environmental Policy Act of 1969, as amended (42 U.S.C. 4321 et seq.), the National Flood Insurance Act of 1968, as amended (42 U.S.C. 4001 et seq.), and the Flood Disaster Protection Act of 1973 (Pub. L. 93-234, 87 Stat. 975), in order to avoid to the extent possible the long and short term adverse impacts associated with the occupancy and modification of floodplains and to avoid direct or indirect support of floodplain development wherever there is a practicable alternative, it is hereby ordered as follows:

SECTION 1. Each agency shall provide leadership and shall take action to reduce the risk of flood loss, to minimize the impact of floods on human safety, health, and welfare, and to restore and preserve the natural and beneficial values served by floodplains in carrying out its responsibilities for (1) acquiring, managing, and disposing of Federal lands and facilities; (2) providing Federally undertaken, financed, or assisted construction and improvements; and (3) conducting Federal activities and programs affecting land use, including but not limited to water and related land resources planning, regulating, and licensing activities.

Sec. 2. In carrying out the activities described in section 1 of this order, each agency has a responsibility to evaluate the potential effects of any actions it may take in

a floodplain; to ensure that its planning programs and budget requests reflect consideration of flood hazards and floodplain management; and to prescribe procedures to implement the policies and requirements of this order, as follows:

(a) (1) Before taking an action, each agency shall determine whether the proposed action will occur in a floodplain—for major Federal actions significantly affecting the quality of the human environment, the evaluation required below will be included in any statement prepared under section 102 (2)(C) of the National Environmental Policy Act. This determination shall be made according to a Department of Housing and Urban Development (HUD) floodplain map or a more detailed map of an area, if available. If such maps are not available, the agency shall make a determination of the location of the floodplain based on the best available information. The Water Resources Council shall issue guidance on this information not later than October 1, 1977.

(2) If an agency has determined to, or proposes to, conduct, support, or allow an action to be located in a floodplain, the agency shall consider alternatives to avoid adverse effects and incompatible development in the floodplains. If the head of the agency finds that the only practicable alternative consistent with the law and with the policy set forth in this order requires siting in a floodplain, the agency shall, prior to taking action, (1) design or modify its action in order to minimize potential harm to or within the floodplain, consistent with regulations issued in accord with section 2(d) of this order, and (11) prepare and circulate a notice containing an explanation of why the action is proposed to be located in the floodplain.

(3) For programs subject to the Office of Management and Budget Circular A-95, the agency shall send the notice, not to exceed three pages in length including a location map, to the state and areawide A-95 clearinghouses for the geographic areas affected. The notice shall include: (i) the reasons why the action is proposed to be located in a floodplain; (ii) a statement indicating whether the action conforms to applicable state or local floodplain protection standards and (iii) a list of the alternatives considered. Agencies shall endeavor to allow a brief comment period prior to taking any action.

(4) Each agency shall also provide opportunity for early public review of any plans or proposals for actions in floodplains, in accordance with section 2(b) of Executive Order No. 11514, as amended, including the development of procedures to accomplish this objective for Federal actions whose impact is not significant enough to require the preparation of an environmental impact statement under section 102(2)(C) of the National Environmental Policy Act of 1969, as amended.

(b) Any requests for new authorizations or appropriations transmitted to the Office of Management and Budget shall indicate, if an action to be proposed will be located in a floodplain, whether the proposed action is in accord with this order.

(c) Each agency shall take floodplain management into account when formulating or evaluating any water and land use plans and shall require land and water resources use appropriate to the degree of hazard involved. Agencies shall include adequate provision for the evaluation and consideration of flood hazards in the regulations and operating procedures for the licenses, permits, loan, or grants-in-aid programs that they administer. Agencies shall also encourage and provide appropriate guidance to applicants to evaluate the effects of their proposals in floodplains prior to submitting applications for Federal licenses, permits, loans, or grants.

(d) As allowed by law, each agency shall issue or amend existing regulations and procedures within one year to comply with this order. These procedures shall incorporate the Unified National Program for Floodplain Management of the Water Resources Council, and shall explain the means that the agency will employ to pursue the nonhazardous use of riverine, coastal, and other floodplains in connection with the activities under its authority. To the extent possible, existing processes, such as those of the Council on Environmental Quality and the Water Resources Council, shall be utilized to fulfill the requirements of this order. Agencies shall prepare their procedures in consultation with the Water Resources Council, the Federal Insurance Administration, and the Council on Environmental Quality, and shall update such procedures as necessary.

Sec. 3. In addition to the requirements of section 2, agencies with responsibilities for Federal real property and facilities shall take the following measures:

(a) The regulations and procedures established under section 2(d) of this order shall, at a minimum, require the construction of Federal structures and facilities to be in accordance with the standards and criteria and to be consistent with the intent of those promulgated under the National Flood Insurance Program. They shall deviate only to the extent that the standards of the Flood Insurance Program are demonstrably inappropriate for a given type of structure or facility.

(b) If, after compliance with the requirements of this order, new construction of structures or facilities are to be located in a floodplain, accepted floodproofing and other flood protection measures shall be applied to new construction or rehabilitation. To achieve flood protection, agencies shall, wherever practicable, elevate structures above the base flood level rather than filling in land.

(c) If property used by the general public has suffered flood damage or is located in an identified flood hazard area, the responsible agency shall provide on structures, and other places where appropriate, conspicuous delineation of past and probable flood height in order to enhance public awareness of and knowledge about flood hazards.

(d) When property in floodplains is proposed for lease, easement, right-of-way, or disposal to non-Federal public or private parties, the Federal agency shall (1) reference in the conveyance those uses that are restricted under identified Federal, State, or local floodplain regulations; and (2) attach other appropriate restrictions to the use of properties by the grantee or purchaser and any successors, except where prohibited by law; or (3) withhold such properties from conveyance.

Sec. 4. In addition to any responsibilities under this order and sections 202 and 205 of the Flood Disaster Protection Act of 1973, as amended (42 U.S.C. 4106 and 4128), agencies which guarantee, approve, regulate, or insure any financial transaction which is related to an area located in a floodplain shall, prior to completing action on such transaction, inform any private parties participating in the transaction of the hazards of locating structures in the floodplain.

Sec. 5. The head of each agency shall submit a report to the Council on Environmental Quality and to the Water Resources Council on June 30, 1978, regarding the status of their procedures and the impact of this order on the agency's operations. Thereafter, the Water Resources Council shall periodically evaluate agency procedures and their effectiveness.

Sec. 6. As used in this order:

(a) The term "agency" shall have the same meaning as the term "Executive agency" in

Section 105 of Title 5 of the United States Code and shall include the military departments; the directives contained in this order, however, are meant to apply only to those agencies which perform the activities described in section 1 which are located in or affecting floodplains.

(b) The term "base flood" shall mean that flood which has a one percent or greater chance of occurrence in any given year.

(c) The term "floodplain" shall mean the lowland and relatively flat areas adjoining inland and coastal waters including flood-prone areas of offshore islands, including at a minimum, that area subject to a one percent or greater chance of flooding in any given year.

Sec. 7. Executive Order No. 11296 of August 10, 1968, is hereby revoked. All actions, procedures, and issuances taken under that order and still in effect shall remain in effect until modified by appropriate authority under the terms of this order.

Sec. 8. Nothing in this order shall apply to assistance provided for emergency work essential to save lives and protect property and public health and safety, performed pursuant to sections 306 and 306 of the Disaster Relief Act of 1974 (88 Stat. 148, 42 U.S.C. 5145 and 5146).

Sec. 9. To the extent the provisions of section 2(a) of this order are applicable to projects covered by section 104(h) of the Housing and Community Development Act of 1974, as amended (88 Stat. 640, 42 U.S.C. 5304(h)), the responsibilities under those provisions may be assumed by the appropriate applicant, if the applicant has also assumed, with respect to such projects, all of the responsibilities for environmental review, decisionmaking, and action pursuant to the National Environmental Policy Act of 1969, as amended.

JIMMY CARTER

THE WHITE HOUSE, May 24, 1977.

#### VETERANS ADMINISTRATION STATION COMMITTEE ON EDUCATIONAL ALLOWANCES Meeting

Notice is hereby given pursuant to Section V, Review Procedure and Hearing Rules, Station Committee on Educational Allowances that on October 31, 1977, at 10:00 a.m., the Veterans Administration Regional Office Station Committee on Educational Allowances shall at Federal Building—U.S. Courthouse, Room A-220, 110 9th Avenue, South, Nashville, Tenn., conduct a hearing to determine whether Veterans Administration benefits to all eligible persons enrolled in Dallas Bay Skypark, P.O. Box 34, Crabtree Road, Hixson, Tenn., should be discontinued, as provided in 38 CFR 21.4134, because a requirement of law is not being met or a provision of the law has been violated. All interested persons shall be permitted to attend, appear be-

fore, or file statements with the Committee at that time and place.

Dated: September 22, 1977.

R. S. BIELAK,  
Director, VA Regional Office,  
Nashville, Tenn.

#### INTERSTATE COMMERCE COMMISSION

[Notice No. 488]

#### ASSIGNMENT OF HEARINGS

SEPTEMBER 27, 1977.

Cases assigned for hearing, postponement, cancellation or oral argument appear below and will be published only once. This list contains prospective assignments only and does not include cases previously assigned hearing dates. The hearings will be on the issues as presently reflected in the Official Docket of the Commission. An attempt will be made to publish notices of cancellation of hearings as promptly as possible, but interested parties should take appropriate steps to insure that they are notified of cancellations or postponements of hearings in which they are interested.

MO 129537 (Sub 19), Reeves Transportation Co., now assigned October 17, 1977, at Atlanta, Ga., is cancelled and reassigned for December 5, 1977 (1 week), at Jackson, Miss., in a hearing room to be later designated.

I & S M 39619, passenger fare increases, Pawtucket Valley Bus Lines, Inc., now assigned November 1, 1977 (4 days), at Providence, R.I., in a hearing room to be later designated.

I & S M 29575, commutation rules, Hudson Transit Lines, Inc., July 1977, now assigned October 3, 1977, at New York, N.Y., is postponed indefinitely.

MO 123872 (Sub 67), W & L Motor Lines, Inc., now assigned October 19, 1977, at Washington, D.C., is canceled and transferred to Modified Procedure.

MO 142788, Farruggio's Limousine Service, a division of Farruggio's Bristol and Philadelphia Auto Express, Inc., now assigned December 5, 1977, at Philadelphia, Pa., is canceled and transferred to Modified Procedure.

MO 118855 (Sub-No. 379), International Transport, Inc., now being assigned November 9, 1977 (1 day), for hearing in Denver, Colo., will be held in Room 158, U.S. Customs House, 721 19th Street.

MO 118535 (Sub-No. 101), Tiona Truck Line, Inc., now being assigned November 10, 1977 (1 day), for hearing in Denver, Colo., will be held in Room 158, U.S. Customs House, 721 19th Street.

MO 123407 (Sub-No. 368), Sawyers Transport, Inc., now being assigned November 11, 1977 (1 day), for hearing in Denver, Colo., will be held in Room 158, U.S. Customs House, 721 19th Street.

MO 138141 (Sub 4), Louis Santora, Jr., d.b.a. AAA United Limousine Service, now assigned October 11, 1977, and will be held at the Sheraton Regal Motel, Kingsbridge Road, Piscataway, N.J.

MO 129387 (Sub 31), Payne Transportation, Inc., now assigned November 16, 1977, at Denver, Colo., is being advanced to November 14, 1977 (1 week), at Denver, Colo., in a hearing room to be later designated.

MO 109897 (Sub 2), Gray Line New York Tours Corp., now assigned November 9, 1977, at Newark, N.J., is canceled, application dismissed.

MO 114832 (Sub-No. 92), Apple Lines, Inc., now assigned November 1, 1977, at Denver, Colo., will be held in Room 158, U.S. Customs House, 721 19th Street.

MO 134286 (Sub-No. 17), Illinois Express, Inc., now assigned November 2, 1977, at Denver, Colo., will be held in Room 158, U.S. Customs House, 721 19th Street.

MO 58035 (Sub-No. 11), Trans-Western Express, Ltd., now assigned November 3, 1977, at Denver, Colo., will be held in Room 158, U.S. Customs House, 721 19th Street.

MO 114509 (Sub-No. 100), Shaffer Trucking, Inc., now assigned November 7, 1977, at Denver, Colo., will be held in Room 158, U.S. Customs House, 721 19th Street.

AB 19 (Sub-No. 32), the Baltimore & Ohio Railroad Co., abandonment near Green Spring and Petersburg in Hampshire, Hardy, and Grant Counties, W. Va., now assigned October 17, 1977, at Moorefield, W. Va., is postponed to November 7, 1977 (1 week), at the Circuit Court Room, County Courthouse, Washington Street, Moorefield, W. Va.

H. G. HOMME, Jr.,  
Acting Secretary.

#### [ 7035-01 ]

[P.D. 16577 (Sub-No. 1)]

#### SOUTHERN RAILWAY CO.

#### Purchase

SEPTEMBER 23, 1977.

By order dated November 25, 1949, in Finance Docket No. 16577, the Commission, Division 4, authorized the purchase by the Southern Railway Co. of all of the franchises, rights and properties of Atlantic & Yadkin Railway Co., subject to conditions. One condition imposed by that order is that Commission approval is required before any junctions may be eliminated. By petition filed August 26, 1977, Southern Railway Co. and Norfolk & Western Railway Co. seek to eliminate the interchange at Walnut Cove, near Winston-Salem, N.C.

Notice is hereby given that this proceeding is being reopened for the limited purpose of eliminating the above-noted interchange condition.

Petitions for leave to intervene in this proceeding are due 30 days from the date of this notice.

H. G. HOMME, Jr.,  
Acting Secretary.

### CONSUMER PRODUCT SAFETY COMMISSION.

TIME AND DATE: October 6, 1977; 9:30 a.m.

LOCATION: 3rd Floor Hearing Room, 1111 18th Street, NW., Washington, D.C.

STATUS: Open.

#### MATTERS TO BE CONSIDERED:

1. *Petition on grocery carts, CP 75-23.* In this petition, Edward Press, M.D., has asked the Commission to set mandatory safety standards to address alleged hazards associated with grocery carts.

2. *Petition on labeling toxic substances, HP 77-3.* In this petition, Barry Rumack, M.D., has asked the Commission to require labeling of consumer products which contain ingredients which are listed on the National Institute of Occupational Safety and Health (NIOSH) toxic substances list.

3. *Petition on combustibility labeling of paints, HP 74-16.* The National Paint and Coatings Association, in this petition, has asked the Commission to exempt paints and related products in the combustible category from "front" or "main" panel labeling required by regulations under the Federal Hazardous Substances Act (FHSA).

4. *Petition on fluorocarbon refrigerants, CP 77-3.* In this petition, James C. Levangle has asked the Commission to issue a rule concerning the use of certain refrigerants used in commercial and residential refrigerating and air conditioning units.

5. *Petition on nitrobenzene, HP 75-20.* Daniel M. Lipkin has asked the Commission to ban the use of nitrobenzene as an ingredient in household cleaning or polishing compounds, especially in those which are dispensed as a spray.

6. *Petition on architectural glazing, AP 77-4.* In this petition under the Administrative Procedures Act, the Anderson Glass Co. has asked the Commission to exempt from the standard for architectural glazing materials, glazing materials contracted for prior to the effective date of the standard but not incorporated into products subject to the standard until after the effective date.

7. *Possible substantial product hazard: Frohock-Stewart, Inc., bath stool, ID 77-41.* The staff has recommended that the Commission accept the corrective action which this firm has implemented to deal with a possible substantial product hazard involving bath stools which may collapse because of incorrect assembly at the factory.

8. *Possible substantial product hazard: Robertshaw Controls Co., ID 76-77.* Based on its evaluation that the defect in these products does not pose a substantial product hazard, the staff has recommended that the Commission close the case involving certain gas furnace controls manufactured by the Grayson Controls Division of Robertshaw.

9. *Possible substantial product hazard: Admiral Wire & Cable Corp. trouble lights, 76-82.* The staff has recommended that the Commission close this case based on a conclusion that further Commission efforts to recall the trouble lights would be fruitless.

10. *Possible substantial product hazard: International Harvester Co. Cub Cadet tractors, ID 77-40.* The staff has recommended that the Commission accept the corrective action plan, and close the case in this possible substantial hazard case involving possibly defective brakes on three models of tractors.

11. *Recordkeeping regulations under Section 16(b) of the Consumer Product Safety Act.* If approved by the Commission, this draft FEDERAL REGISTER document would repropose requirements for maintaining and retaining records of safety-related complaints. The draft makes substantive changes to the original requirements which were proposed in 1974. The Commission is also asked to approve a rule making the necessary determination under section 30(d) of the CPSCA that the rule would apply to manufacturers (including importers), private labelers and distributors of all products within the Commission's jurisdiction.

12. *Draft proposed certification regulation for architectural glazing materials.* This draft FEDERAL REGISTER document would propose regulations under section 14(b) of the Consumer Product Safety Act establishing reasonable testing procedures for architectural glazing materials, which would serve as the basis for certifying that the glazing complies with requirements of the Standard for Architectural Glazing Materials.

13. *Amendment to meetings policy.* If approved by the Commission, this draft FEDERAL REGISTER document would amend the CPSC meetings policy (16 CFR Part 1012) to exclude from the policy all meetings attended solely by officers and employees of government agencies. Under the present policy, meetings can be scheduled on short notice only with the approval of the Chairman, and meetings with other agencies can be closed only if the CPSC staff person attending the meeting determines that extraordinary circumstances warrant granting the request of other agencies to

close the meeting. The issue of amendment has arisen as a result of recent initiatives of interagency cooperation involving the Commission and EPA, FDA, and OSHA.

14. *Office of Public Participation.* The Commission will consider a number of issues related to establishing the Office of Public Participation, including personnel qualifications, staff selection, operating budget, funding of participants in Commission proceedings, and other functions of the Office.

15. *Voluntary standards policy.* The Commission will consider a draft policy on the relationship that CPSC will establish with regard to voluntary product safety standards and voluntary standards-setting organizations.

16. *Communications antennas: 27(c) labeling rule.* With this draft FEDERAL REGISTER document, the Commission would propose to require manufacturers of citizens band base station antennas, television antennas, and antenna support structures to give certain instructions, labels, and warnings related to possible electric shock hazards which can occur when installing or removing such antennas.

### EQUAL EMPLOYMENT OPPORTUNITY COMMISSION.

FEDERAL REGISTER CITATION OF PREVIOUS ANNOUNCEMENT: 42 FR 48954, September 28, 1977, S-1444-77 and S-1465-77.

PREVIOUSLY ANNOUNCED TIME AND DATE OF MEETING: 9:30 a.m. (eastern time), Thursday, September 29, 1977.

CHANGES IN THE MEETING: Portions open to the public:

The following items is deleted from the agenda: Proposed contract to print 1978 Employer Survey Forms (EEO-1).

The following items are added to the agenda: Procurement; processing 1977 Elementary-Secondary Staff Information Report (EEO-5); procurement; processing 1977 Higher Education Information Report (EEO-6).

A majority of the entire membership of the Commission determined by recorded vote that the business of the Commission required these changes and that no earlier announcement was possible.

The vote was as follows: In favor of change—Eleanor Holmes Norton, Chair; Ethel Bent Walsh, Commissioner; Daniel E. Leach, Commissioner. Opposed—None.

### FEDERAL MARITIME COMMISSION.

TIME AND DATE: October 5, 1977, 10 a.m.

PLACE: Room 12126, 1100 L Street NW., Washington, D.C. 20573.

STATUS: Parts of this meeting will be open to the public. The rest of the meeting will be closed to the public.

MATTERS TO BE CONSIDERED: Portions open to the public:

1. Docket No. 75-13—Petition of North Atlantic French Atlantic Freight Conference and North Atlantic Baltic Freight Conference for a declaratory order—Report on effects of Commission decision on tariff filing activity.

2. Recommendation for approval of agreement No. T-3501, between the City of Richmond, Calif. (City), and Matson Terminals, Inc. (Matson), providing for management by Matson of City's container terminal.

3. Agreements Nos. 8054-18 and 9502-11: Modifications of the South and East Africa/U.S.A. Conference and the United States/South and East Africa Conference Agreement, respectively, providing for establishment of through routes and rates.

4. Agreement No. 10050-2: United States Flag-Far East discussion agreement providing for a two-year extension of the agreement.

5. Agreement No. 8770-6, modification of the United Kingdom/U.S.A. Gulf westbound rate agreement and agreement No. 9988-5, modification of the Continental/U.S. Gulf Freight Association providing for the admission of mini-bridge operators to membership.

6. Agreement No. 10135-4: A modification of the Far East and Pacific West-bound Conferences' member lines discussion agreement providing for indefinite extension of the agreement.

Portion closed to the public: 1. Report on arbitrary charges of Trans-Pacific conferences for carriage of cargo to Inchon, Korea.

#### SECURITIES AND EXCHANGE COMMISSION.

Notice is hereby given, pursuant to the provisions of the Government in the Sunshine Act, Pub. L. 94-409, that the Securities and Exchange Commission will hold the following meetings during the week of October 3, 1977, in Room 625, 500 North Capitol Street, Washington, D.C.

A closed meeting will be held on Tuesday, October 4, 1977, at 10 a.m. Open meetings will be held on Wednesday, October 5, 1977, at 10 a.m. and at 4:15 p.m.

The Commissioners, their legal assistants, the Secretary of the Commission, and recording secretaries will attend the closed meeting. Certain staff members who are responsible for the calendared matters may be present.

The General Counsel of the Commission, or his designee, has certified that, in his opinion, the items to be considered at the closed meeting may be so considered pursuant to one or more of the exemptions set forth in 5 U.S.C. 552b(c) (4) (8) (9) A and (10) and 17 CFR 200.402 (a) (8) (9) (i) and (10).

Chairman Williams, Commissioners Loomis, Evans, and Pollack determined to hold the aforesaid meeting in closed session.

The subject matter of the closed meeting scheduled for Tuesday, October 4, 1977, at 10 a.m. will be:

- Formal orders of investigation.
- Institution of injunctive actions.
- Settlement of injunctive actions.
- Institution of administrative proceedings.
- Settlement of administrative proceedings.
- Simultaneous institution and settlement of injunctive actions.
- Referral of investigative files to Federal, State or Self Regulatory authorities.
- Regulatory matters arising from or bearing enforcement implications.
- Authorization of staff member to testify.
- Interim allowances in Chapter X proceeding.
- Subpoena enforcement proceeding.
- Rule 2(e) proceeding.

The subject matter of the open meeting scheduled for Wednesday, October 5, 1977, at 10 a.m. will be:

1. Application filed by MPB Corporation, an indirect wholly-owned subsidiary of Wheelabrator-Frye, Inc., for an order exempting the company from certain reporting requirements of the Securities Exchange Act of 1934.
2. Proposed extension of comment period on issues raised by institutional investors regarding beneficial ownership disclosure requirements.

3. Proposed withdrawal of the formulation of a rule to provide an exemption for lessor, switching and terminal railroad companies from certain financial statement disclosure requirements.

4. Affirmation of duty officer authorization for a staff member to appear and testify at the request of the receiver appointed in SEC v. Hay Springs, Corp.

5. Affirmation of duty officer authorization to transmit a response to an inquiry from Senator Lawton Chiles concerning what efforts the Commission has made to implement the Government in the Sunshine Act (Pub. L. 94-409) and what recommendations the Commission has to further the principles of that legislation.

6. Proposal filed by the New York Stock Exchange, Inc. relating to the permissible scope of communication between New York Stock Exchange specialists and issuers in their specialty stocks.

7. Proposed amendments filed by the New York Stock Exchange, Inc. regarding its

Plan for Implementation of FOCUS (Financial and Operational Combined Uniform Single) Reporting System. This amendment would establish criteria for NYSE's recommendations that certain carrying members be permitted to file portions of the reporting form within 17 business days, instead of the current requisite time of 10 business days.

The subject matter of the open meeting scheduled for Wednesday, October 5, 1977, at 4:15 p.m. will be:

Meeting with officials of the Bank Administration Institute to discuss their current activities.

[Docket No. 78N-0480]

## SKIN TEST ANTIGENS

Proposed Implementation of Efficacy  
Review

AGENCY: Food and Drug Administration

ACTION: Proposal.

**SUMMARY:** The Food and Drug Administration (FDA) is proposing to amend the biologics regulations in response to the report of the Advisory Review Panel on the safety, effectiveness, and labeling of skin test antigens. Additionally, on the basis of the Panel's findings and recommendations, the Commissioner of Food and Drugs is announcing his conclusions on those products in Category II (unsafe, ineffective, or misbranded) and Category IIIB (off the market pending completion of studies permitting a determination of effectiveness). The licenses for products in Category II have already been revoked at the request of the license holder. On or before October 31, 1977, the Commissioner will publish notices of opportunity for hearing to revoke the licenses for products in Category IIIB. The Commissioner is also announcing his conclusions as to those products in Category I (safe, effective, and not misbranded) and Category IIIA (on the market during further studies in support of effectiveness) and, by this proposal, is inviting comments and the submission of views and additional data on the status of these products.

**DATES:** Comments by November 29, 1977.

**ADDRESS:** Written comments to the Hearing Clerk (HFC-20), Food and Drug Administration, Room 4-65, 5600 Fishers Lane, Rockville, Md. 20857.

**FOR FURTHER INFORMATION CONTACT:**

Al Rothschild, Bureau of Biologics (HFB-620), Food and Drug Administration, Department of Health, Education, and Welfare, 8800 Rockville Pike, Bethesda, Md. 20014 (301-443-1920).

**SUPPLEMENTARY INFORMATION:** In the FEDERAL REGISTER of February 13, 1973 (38 FR 4319), the Commissioner issued § 601.25 (21 CFR 601.25) concerning procedures for review of safety, effectiveness, and labeling of biological products licensed prior to July 1, 1972. The biological products reviewed were assigned to one of the following categories: (a) Bacterial vaccines and bacterial antigens bearing labeling stating "No U.S. Standards of Potency," (b) bacterial vaccines and toxoids with standards of potency, (c) viral vaccines and rickettsial vaccines, (d) allergenic ex-

tracts, (e) skin test antigens, (f) blood and blood derivatives.

Pursuant to § 601.25, the Commissioner assigned responsibility for the initial review of each of the biological product categories to a separate independent advisory panel consisting of qualified experts to insure objectivity of the review and public confidence in the use of these products. The Commissioner charged each panel to (1) evaluate the safety and effectiveness of the biological product, (2) review the labeling of the biological product, and (3) advise him on which biological products under review are safe, effective, and not misbranded, in the form of an advisory review panel report to the Commissioner. The advisory review panel report is to include a statement classifying products into 1 of 3 categories.

Category I designates those biological products determined by the panel to be safe, effective and not misbranded. The panel statement may include any condition relating to active components, labeling, tests required prior to release of batches, product standards, or other conditions necessary or appropriate for their safety and effectiveness.

Category II designates those biological products determined by the panel to be unsafe or ineffective or to be misbranded.

Category III designates those biological products determined by the panel not to fall within either Category I or II on the basis of the panel's conclusion that the available data are insufficient to classify such biological products, and for which further testing is therefore required. Those biological products in Category III for which continued licensing, manufacturing, and marketing are recommended are designated as Category IIIA. Those biological products in Category III for which revocation of the license is recommended (and thus denying continued manufacturing and marketing) are designated as Category IIIB. The recommendation for either Category IIIA or IIIB is based on an assessment of the present evidence of safety and effectiveness of the product and the potential benefits and risks likely to result from the continued use of the product for a limited period of time while the questions raised concerning the product are being resolved by further study.

Subsequently, in the FEDERAL REGISTER of February 26, 1974 (39 FR 7445), the Commissioner requested that interested persons nominate qualified experts to serve on the Panel on Review of Skin Test Antigens. In addition, the Commissioner solicited submission of data pertinent to these products to facilitate review of safety, effectiveness, and labeling of these products and to provide all interested persons an opportunity to present, for consideration by the Panel, the best information available to support the stated claims for skin test antigens.

Data and information submitted pursuant to the February 26, 1974, notice and falling within the provisions of 18 U.S.C. 552(b) or 21 U.S.C. 331(j) have been handled as confidential. However,

with the publication of this proposed implementation and the full report of the panel, such data and information will, pursuant to § 601.25(b)(2), be made publicly available October 31, 1977, and may be viewed at the office of the Hearing Clerk, except to the extent that the person submitting the data demonstrates that such data still fall within one or more of the confidentiality provisions. Accordingly, any such comments concerning confidentiality should be submitted by October 31, 1977, to Office of Efficacy Review (HFB-5), Bureau of Biologics, 8800 Rockville Pike, Bethesda, Md. 20014.

The Commissioner appointed the following Panel to review the data and information submitted, and to prepare a report on the safety, effectiveness, and labeling of skin test antigen biological products:

Panel Chairman, John A. Sbarbaro, M.D., M.P.H., Director of Public Health and Deputy Director for Medical Affairs, Denver Department of Health and Hospitals; Associate Professor of Medicine and Preventive Medicine, University of Colorado School of Medicine.

Charlotte C. Campbell, D.Sc., Professor of Medical Sciences, Southern Illinois University School of Medicine.

George W. Comstock, M.D., Professor of Epidemiology, The Johns Hopkins School of Hygiene and Public Health.

Fred S. Kantor, M.D., Professor of Medicine, Yale University School of Medicine.

George S. Kobayashi, Ph.D., Associate Professor, Division of Dermatology, Department of Internal Medicine, Washington University School of Medicine.

John E. Salvaggio, M.D., Henderson Professor of Medicine, Tulane Medical School.

Emanuel Wolinsky, M.D., Professor of Medicine, Case Western Reserve University, Director of Microbiology, Cleveland Metropolitan General Hospital.

The Panel was first convened on June 25, 1974, in an organizational meeting. Working meetings were held on September 20 and 21, October 18 and 19, November 22 and 23, 1974, and January 10 and 11, February 28 and March 1, April 18 and 19, June 6 and 7, August 1 and 2, September 26 and 27, and December 5 and 6, 1975.

Three nonvoting liaison representatives served on the Panel. Ms. Cathy Sulzberger, nominated by the Consumer Action for Improved Food and Drugs organization, served as the consumer representative. John G. Adams, Ph.D., nominated by a number of producers with products under review by the Panel, served as the industry representative. Karl Bambach, Ph.D., substituted for Dr. Adams in his absence.

Clay Sisk, U.S. Public Health Service, served as Executive Secretary to the Panel. Morris Schaeffer, M.D., Ph.D., participated in the Panel meetings in his capacity as Director, Office of Efficacy Review, Bureau of Biologics, Food and Drug Administration.

The following individuals were given an opportunity to appear before the Panel to express their views either at their own or the Panel's request:

Walter R. Ashford, Ph.D.  
Sotiros D. Chaperas, Ph.D.  
Murray S. Cooper, Ph.D.  
Phyllis Q. Edwards, M.D., MPH  
Laurence S. Parer, M.D., MPH  
Kenneth Herrmann, M.D.  
Silvio Landi, Ph.D.  
Stephen A. Szumski, Ph.D.

No person who so requested was denied an opportunity to appear before the Panel.

The following firms made submissions relating to the indicated products:

The Panel has thoroughly reviewed the literature and various data submissions and has considered all pertinent data and information submitted through December 5, 1975, in arriving at the following conclusions and recommendations:

## BASIS OF EVALUATION

Recognition of the relationship between microorganisms and the human host is a relatively new development in the long history of mankind. Less than 100 years of intensifying investigations has revealed that contact between man

and an infecting agent can range in results from imperceptible and transient, but harmless, multiplication within the host to overwhelming infection resulting in death of the host. Although any microorganism capable of multiplying in man is a potential threat, the vast majority of these agents are quickly subdued by man's natural immune mechanisms. Once having come in contact with the infecting microorganism, the host may become "sensitized" to the infecting agent or components of the infecting agent. This "sensitization" is part of the host immune system. Some microorganisms such as *Mycobacterium tuberculosis* pose a serious and lifelong threat to the host, despite such "sensitization."

The ability to identify whether an individual has experienced or is experiencing invasion by a specific microorganism is often of medical significance. One of the earliest developed methods through which this relationship between the host and parasite can be ascertained is the injection of cellular components of the suspected microorganism into the skin of the presumed host. The concept underlying this test is relatively simple: Components (antigens) capable of eliciting response by "sensitized" immune defenses of the body should be easily identified when placed in a small confined area of the skin where the reaction by the host defensive system can be measured. A definite response (positive reaction) indicates contact and interaction between the individual and the specific microorganism or an antigenically related one.

Initially, this testing process was grossly crude, involving the use of ill-defined antigens thought to be derived from specific microorganisms but often including components of other substances such as those used to grow or prepare the microorganism for skin injection. While experience and scientific advances have permitted the gradual refining of many of these earlier products, the state of the art still encompasses a wide range of products of varying purity and potency.

In evaluating these products for both safety and effectiveness, the Panel first defined the characteristics of an ideal skin test antigen. A perfect skin test should be sensitive enough to identify every individual who has interacted with a particular microorganism, yet specific enough to identify only those individuals. At least three variables contribute to the effectiveness of the skin test process:

(1) *Immunological system.* The variable introduced by the individual human immunological response system is beyond the scope of this Panel. However, general immune deficiencies and poorly understood findings such as specific anergy (nonreactivity to a specific antigen) are medical realities that complicate this testing process. Gradations of these entities undoubtedly exist, adding further to the impact of this test variable. While of significance in a single setting, these factors should have little effect on the overall test product or on the epidemiological

conclusions arising from use of the skin test.

(2) *Test material.* Ideally, the antigen used in a skin test process should be identical from production lot to production lot, an accomplishment that can only be achieved if the exact chemical composition of the antigen has been identified and can be reproduced. Additionally, to insure equality of biological impact by production batches, evidence of identical antigenicity should be confirmed in an animal model proven to correlate with the human system. To be accurate, this animal model requires the existence of a reference standard which has been evaluated in human population groups and against which new production lots can be compared. Data must exist confirming the permanent stability of the reference standard. Similarly, an ideal skin test antigen would remain stable over a defined time, neither changing through chemical decomposition nor adsorption to container walls.

Serious reconsideration must be given to any test material (antigen) which can alter the immunological system when deposited into a small confined area of human skin. Material which causes the development of a lifelong immunological response when there has been no interaction between host and microorganism is unsuitable for skin test use. Such material may be valuable as a vaccine, but not as a diagnostic tool. Even a transient effect on an immune system which has not had experience with the source microorganism is a serious drawback to use of the test material as a skin test antigen.

In addition to not inducing an immune response, the ideal skin test antigen should not augment or boost the reaction resulting from a previous interaction between host and microorganism. Unfortunately, this phenomenon is not unusual and probably results more from the stimulation or re-awakening of a "sensitized" immune system, diminished from years of noncontact with the specific microorganism, rather than from any characteristic of skin test antigen material itself. Ideally, the antigen deposited into the skin should be capable of being completely eliminated by the host.

Finally, the solution (diluent) into which the testing material is dissolved must neither sensitize the immune system nor elicit any other form of host reaction, local or systemic. These attributes should also characterize the preservative used in the product.

(3) *Test method.* An ideal test method requires the simple and reproducible deposit of an accurate amount of test antigen into a selective skin site of the host. The immune response (reaction) elicited by this antigen should be easily measured; round or sufficiently symmetrical and uniform in shape so that a single diameter is a reliable indicator of reaction size. The boundaries of the reaction should be clear-cut for ease of measurement. Furthermore, the range of reaction sizes should be large enough to permit quantitative dose response studies. The response must remain unchanged for a

defined time, preferably over a 24-hour period, thereby allowing for flexibility in the time for completing the measurement (reading) of the test response.

The conceptualization of these characteristics of the ideal effective skin test is outlined as follows:

#### IDEAL SKIN TEST ANTIGEN

1. **Product.** The purpose of an ideal skin test antigen is to safely measure skin test reactivity which indicates the presence or absence of specific immunologic experience.
2. **Analysis.**—(a) **Effectiveness.**—The ideal skin test antigen should identify all individuals with specific immunologic experience (sensitivity), and identify only individuals with specific immunologic experience (specificity).

#### CHARACTERISTICS OF EFFECTIVENESS

- (1) **Test material:**
  - (a) Defined chemical composition
  - (b) Reproducibility from lot to lot.
3. **Standardizable in laboratory system.** Laboratory system correlates to system in humans.
  - (a) Stable.
  - (b) Nonsensitizing (at dosage recommended).
  - (c) Does not induce immunologic response.
  - (d) Does not augment immunologic response.
  - (e) Eliminated by host.
  - (f) Diluent nonsensitizing and causes no reaction.
- (1) **Test Method:**
  - (a) Application of test
  - (b) Simple.
  - (c) Accurate dosage (amount of material unit volume).
  - (d) Measurement of test:
    - (a) Round reaction.
    - (b) Clear-cut boundary.
  - (e) Quantitative dose response sufficient range of reaction size.
  - (f) Duration of reaction. Refined time course for the positive reaction.

The Panel also defined the characteristics of safety associated with the ideal skin test. Such a product would be documented as producing no adverse effect—immediate or long term, localized or systemic, major or minor.

Experience suggests, however, that while immediate adverse effects may become quickly apparent and easily documented, the long term impact of a subtle genetic change or a slow growing virus may not be recognized if appropriate tests are not available or are not utilized. Moreover, the human host has only a limited variety of responses by which it can evidence local damage or systemic malfunction. As a result, adverse reactions arising from a specific product may be easily but erroneously attributed to a different source, and the real correlation never identified. Thus, while by no means ideal and frequently inadequate, animal and laboratory systems are often the only available tools by which the safety of a product can be estimated.

Considering the minute quantity of material used in the skin test process and its placement in a localized area of the skin, the Panel believes that it is highly unlikely that any of the products reviewed have intrinsic mutagenic or teratogenic properties. However, the

ideal test material would be shown to be free of all contaminants, including microbial agents. The test material should not be harmful to the individual.

The ideal test method would be painless, noninjurious, and bloodless.

The outline of the conceptualization of the characterizations of the ideal effective skin test continues as follows:

- (b) **Safety.** (1) Product does not cause:
  - (1) Anaphylaxis.
  - (2) Severe skin reaction.
  - (3) Constitutional symptoms
  - (4) Carcinogenic effects.
  - (5) Teratogenic effects.
  - (6) Mutagenic effects.
  - (7) Sensitization to product.
  - (8) Pain.
  - (9) Skin irritation
  - (10) Scarring.
  - (11) Change in pigmentation
  - (12) Reactivation of disease.
  - (13) Interference with action of other medications.
- (1) **Test material:**
  - (a) Free of live microbial agents (sterility):
    - (a) Bacterial
    - (b) Viral
    - (c) Mycoplasma
    - (d) Fungi
    - (e) Other.
  - (2) Free of other contaminants (purity):
    - (a) Microbial (nonlive).
    - (b) Nonmicrobial.
  - (3) Eliminated by host.
  - (4) Nontoxic:
    - (a) By human experience.
    - (b) By best available tests.
- (1) **Test method:**
  - (1) Painless.
  - (2) Noninjurious.
  - (3) Bloodless.

All products submitted to the Panel on Review of Skin Test Antigens were compared to this conceptual model of the ideal skin test and evaluated for both safety and effectiveness. Any variance from the ideal was thoroughly reviewed and documented.

The biological product licenses for Diphtheria Toxin for Schick Test by the Parke, Davis and Co., Lymphogranuloma Venereum Antigen by E. R. Squibb and Sons, Inc., and Tuberculin, Old, by Parke, Davis and Company are still listed as being in effect by the Bureau of Biologics as of April 29, 1977, although it is understood that the products are not being marketed. No data were submitted to this Panel for review, therefore, these products may not be determined to fall within either Category I or Category II. If products were to be marketed under these licenses, there are no data available to the Panel to indicate that the safety and effectiveness of the products and the potential benefits and risks are such that marketing should be permitted for a period of time while such data are being developed. Therefore, it is recommended that these products be placed in Category IIIB and that the licenses be placed in suspension or be revoked unless sufficient data are submitted to the Bureau of Biologics to answer the questions raised for similar products reviewed in this report.

For each product reviewed, a Generic Statement was prepared evaluating the product in general terms. This is followed

by a review which evaluates each manufacturer's specific licensed biological product and concludes with the Panel's recommendations. The following Generic Statements and reviews were submitted:

#### COCCIDIOIDIN

##### GENERIC STATEMENT

The principal use of coccidioidin is as a skin test reagent to detect delayed hypersensitivity or cell mediated immunity reactions in individuals who have had immunologic experience with *Coccidioides immitis*. The coccidioidin test is not 100 percent sensitive since some infected subjects do not react to it. Both the clinical form of the disease and the time of testing after acquisition of infection are important in development of positive reactions. Most patients with nonprogressive primary coccidioidomycosis develop positive delayed skin tests within the 1st week following illness, and virtually all patients become reactive after the 3d week of illness (Ref. 2). Patients with extensive pulmonary cavitation due to coccidioidomycosis may not demonstrate positive delayed skin tests and those with severe disseminated disease are often anergic, failing to react to coccidioidin as well as to other delayed hypersensitivity intradermal skin test agents (Refs. 3 through 5). Cross reactivity is observed in some animals infected with *Nocardia asteroides*, *Aspergillus terreus*, and *Aspergillus fumigatus* (Ref. 6). Although coccidioidin appears to be more specific than other skin test agents such as histoplasmin and blastomycin, cross reactions with histoplasmin (Refs. 7 and 8) may be sufficiently common in clinical practice to be important.

There is considerable variation in batch to batch potency of coccidioidin but the product is apparently quite stable. The coccidioidin product when inoculated subcutaneously in Freund's complete adjuvant can sensitize rabbits. The product seems safe, and side effects have been mentioned only rarely in spite of tens of thousands of tests alluded to in various published reports. It may induce occasional uncomfortable local reactions with vesiculation, and may rarely exacerbate erythema nodosum reactions. Only two instances of anaphylaxis-like reactions have been reported (Refs. 9 and 10). The product contains thimerosal, an organic mercurial which can sensitize.

In general, coccidioidin testing is useful for epidemiologic surveys and in medical diagnosis by identifying persons with past or present infection with *C. immitis*, although negative reactions in serious systemic forms of the disease may pose a problem in clinical practice.

Coccidioidin skin test reagent is prepared from a culture filtrate of the mycelial phase of *C. immitis*, which is grown on synthetic medium containing asparagine. The major active principle of coccidioidin appears to be a glycoprotein complex with a molecular weight of 31,700 (Ref. 1). Coccidioidin is assayed in humans by comparing reactions from the newly produced product with those produced by the currently available Bureau of Biologics standard. The product is dis-

pensed in liquid form in multiple dose vials in concentrations of 1:100 and 1:10.

*Coccidioides immitis*, a dimorphic fungus, is usually found in lesions as a spherule and there is some evidence that a preparation similar to coccidioidin, namely "spherulin," may ultimately provide a more sensitive skin test than coccidioidin.

#### PRODUCT REVIEW

The natural habitat of *C. immitis* is in the soil of an area with a hot, semi-arid environment. It is among the most virulent of the fungal pathogens. The highly endemic areas of disease include the southwestern United States and northern Mexico, with endemic foci in Central America, Venezuela, Colombia, Paraguay, and Argentina. In addition the disease has been reported to occur in Russia, central Asia, Nigeria, and Pakistan, but these reports still await confirmation (Ref. 37).

Coccidioidomycosis is usually a benign, inapparent, or mild respiratory infection which resolves rapidly. Rarely, the disease is a severe disseminating mycosis with a high fatality rate. Recovery from the mild forms of the disease usually results in lifelong immunity to reinfection. If infection is established, the disease may progress as a chronic pulmonary condition or as a systemic disease involving the meninges, bones, joints, and subcutaneous and cutaneous tissues. Such involvement is characterized by the formation of burrowing abscesses. The initial tissue response and that found in rapidly disseminating disease is suppuration. However, in established chronic and slowly advancing infection, a granulomatous reaction is found, with some areas showing a mixed-type cellular infiltrate.

Coccidioidin skin test reagent is used as a diagnostic aid based on the fact that it causes delayed hypersensitivity skin reactions in persons who have had immunologic experience with the organism. Historically, there have been scattered reports of materials used for purposes of skin testing dating to 1915, but the first substantial use of coccidioidin was in 1928 (Ref. 11). Several coccidioidin skin test preparations were developed following this, but their development was often complicated by the problem of maintaining cultures on synthetic medium for many months in order to produce potent batches (media which allow rapid growth often introduced foreign protein contaminants into the final skin test product). This problem was ultimately solved by using a modification of the synthetic medium employed for production of tuberculin in the manufacture of coccidioidin (Ref. 3). In essence, this medium is still used by both of the current commercial producers of coccidioidin, namely Cutter Laboratories and Iatric Corporation. Initially, investigators used multiple strains of coccidioidin as the original inoculant because of possible antigenic variations. At present, the commercial producers inoculate individually and pool growths later. (The Iatric Corporation produces its skin test antigen

from a supernatant of mycelial mat made from 9 different strains of the organism whereas Cutter Laboratories uses 57 strains.) The number of strains employed may not be critical, however, since there is probably little strain antigenic difference. After the sterile filtrate is diluted to desired concentration, thimerosal is added to a final 1:10,000 concentration. The standard stock solution is diluted to be bioequivalent to the reference coccidioidin (1:100). Individuals who do not respond to the 1:100 dose may be tested with the tenfold stronger concentration (1:10 dose). Individuals with considerable hypersensitivity, such as those with recent coccidioid erythema nodosum, may be tested with dilutions higher than the 1:100 dose (e.g., 1:1000 or greater).

(a) **Effectiveness.** With regard to sensitivity (ability of the skin test material to identify all individuals with specific immunologic experience) the coccidioidin delayed skin test appears to be adequate but, as in the case of most skin tests, not ideal. It has been reported that 83 percent of patients have positive delayed skin reactions to coccidioidin during the first few days of illness, 93 percent during the 2d week, and 100 percent during the 4th week (Ref. 2). Lack of skin reactivity may be noted under the following circumstances: (1) early in the first weeks of illness, (2) dissemination of overwhelming infection, (3) in certain patients with chronic cavity pulmonary disease, and (4) excessive time lapse between disease activity and period of skin testing. In a recent study Levine and co-workers demonstrated that failure to react to coccidioidin was noted in 35 percent of individuals who reacted to the newer spherulin skin test antigen. Also included in this study were groups of control out-patients living in non-endemic areas. None of these controls reacted to either coccidioidin or spherulin while 8.9 to 12.8 percent reacted to histoplasmin (Ref. 15).

With regard to specificity (ability to identify only individuals with specific immunologic experience) there are cross reactions with coccidioidin in patients infected with other fungi such as *Histoplasma* and *Blastomyces* species (Refs. 7, 8, 12, and 13) and possibly other unknown agents. There appear to be no significant cross reactions with coccidioidin in patients infected with mycobacteria (Refs. 3 and 14). Cross reactions with coccidioidin in patients infected with other fungi are more common at the 1:10 dilution (Ref. 13). Reactions to coccidioidin in individuals who do not react to histoplasma seem to be rare in nonendemic areas of the U.S. and Mexico based on studies by Levine et al. (Ref. 15), Edwards and Palmer (Ref. 12), and Edwards et al. (Ref. 8). Skin reactivity to coccidioidin also appears to be reasonably specific in experimental animal models. In a study by Goodman et al. (Ref. 6), involving guinea pigs inoculated individually with 1 of 23 different fungi, most of the fungi exhibited cross reactions with histoplasmin and blastomycin in more than 10 percent of the animals, whereas only those animals infected with

*Nocardia asteroides*, *Aspergillus terreus*, and *Aspergillus fumigatus* showed cross reactivity with coccidioidin in more than 10 percent of the animals.

#### CHARACTERISTICS OF EFFECTIVENESS

(1) **Test material.**—(1) **Chemical composition.** The mycelial supernatant has been examined by several investigators and the contents of polysaccharide and amino acid of the protein material have been elucidated. The exact polysaccharide and protein antigenic composition is not quite clear. In a study by Pappagianis, Putnam, and Kobayashi, soluble polysaccharides from culture filtrates of mycelia of *Coccidioides immitis* consisted mainly of mannose with small amounts of galactose and another reducing sugar (Ref. 1). Ethanol precipitation yielded polysaccharide material accompanied by some nitrogenous material. The active principle of the coccidioidin appeared to be a glycoprotein complex with an average molecular weight of 31,700 (Ref. 1). There was 3 to 4 percent nitrogen present in amino acids (Refs. 1 and 17). In spite of this degree of characterization there appeared to be several antigens present in the preparation as manifested by multiple precipitin arcs on Ouchterlony double diffusion analysis. There is some indication that the total biologic activity may be due to a mixture of antigens (Ref. 16).

(2) **Reproducibility.** It has long been recognized that potency can vary from batch to batch (Ref. 3), but no variability is to be expected in lots prepared from any single batch except for human errors or perhaps deterioration of potency of the batch.

(3) **Standardization.** There appear to be no well defined laboratory systems for standardization of coccidioidin, although recent studies indicate that guinea pigs can be sensitized to coccidioidin and it should therefore be possible to use such a biological system for standardization. In general, all current standardization is performed by comparing delayed skin test reactions produced by the newly manufactured product with those produced by a Bureau of Biologics standard of coccidioidin. All of these tests are done in humans known to be coccidioidin sensitive. It is not usually clear how many individuals are tested or how their degree of immunologic experience with the organism has been verified, nor is it clear whether or not the reactions are read in a blind manner or with what dilutions they are performed.

(4) **Stability.** Coccidioidin skin test material stored at 4° C appears to be stable and uniform as indicated by repeated tests performed with lot 64D 2.5 (the Bureau of Biologics standard) over the years. Even autoclaving of coccidioidin for 30 minutes reduced the potency only slightly (Ref. 3).

(5) **Sensitization.** Studies by Wallraff and Van Liew (Refs. 18 through 20) have shown that multiple injections of coccidioidin with Freund's adjuvant into rabbits and guinea pigs could sensitize, as manifested by production of cutaneous delayed skin reactivity. In man, how-

ever, the material does not appear to be sensitizing at the recommended dosage as shown by studies of Smith in large numbers of army recruits who were repeatedly skin tested (Ref. 3). Another study by Rappaport in which 53 subjects were tested with a wide range of concentrations revealed two conversions to positive reactions (Ref. 21). Those subjects who did convert, however, had been skin tested with stronger concentrations. It is thus possible that more concentrated materials may be sensitizing. Skin testing with coccidioidin on multiple occasions does not induce an increase in humoral antibodies to coccidioidin but serologic reactions to histoplasma antigens may be augmented (Ref. 22). A peculiar coccidioidin "re-test reaction" has been described. It is characterized by the development of an area of induration and erythema at a previously positive skin test site following a new test in a new site (Ref. 23). In another large study (Ref. 24) of laboratory workers who handled *Coccidioides immitis*, slightly over 10 percent of initial negatively reacting employees converted to positive reactions over an 18-hour observation period probably secondary to laboratory infection; significantly, many subjects in this study did not develop positive skin tests in spite of repeated skin testing with coccidioidin.

(6) *Elimination*. The method and degree of elimination of coccidioidin by the host is unknown.

(7) *Diluent*. Coccidioidin contains an organic mercurial preservative (thimerosal) in a concentration of 1:10,000 w/v (weight/volume). Thimerosal has been reported to cause skin reactions (Refs. 25 through 28). The Panel's comments regarding the sensitizing capacity of thimerosal apply to coccidioidin. See the Panel statement on "Thimerosal as a Preservative."

While it is possible that some culture media constituents in the coccidioidin preparation might sensitize, this is unlikely because the culture medium consists of relatively simple compounds in very low concentrations. The same culture medium has also been used in the preparation of tuberculin without any evidence of marked diluent reactions or sensitization. That coccidioidin per se does not cause a high incidence of irritant or allergic skin reactions is strongly suggested by several studies performed in Africa, Mexico, and the U.S.A. on thousands of subjects residing in non-endemic areas who manifested low rates of skin reactivity (in the range of 2 percent or below) to coccidioidin (Refs. 29, 15 and 12).

(ii) *Test method*. The coccidioidin skin test is a relatively simple procedure involving intracutaneous injection of 0.1 ml into the skin of the forearm. The skin test reaction boundaries are rather clear-cut and the reaction is also sufficiently reproducible to allow for determination of quantitative dose response curves (Ref. 3). The action is usually largest between 24 and 48 hours and is

read at these times. An early probable irritant reaction may appear within an hour and occasionally reactions may persist for 72 hours or slightly longer (Ref. 3).

(b) *Safety*. Two episodes of anaphylaxis or anaphylactic-like reactions have been described in extremely sensitive individuals (one reported in the literature and another reported to a commercial manufacturer (Refs. 9 and 10). Erythema nodosum has been precipitated by coccidioidin skin testing (Ref. 3). Another individual with a marked local response developed late onset fever and chills which lasted for 24 hours after testing (Ref. 32). Hersh and Benson reported one immediate wheal and erythema skin reaction to coccidioidin, as did Krudy and Hoff. Similar reactions of this type have been noted by Smith and Pappagianis (Refs. 33 through 35). However, those having lengthy experience with coccidioidin indicate that constitutional symptoms of fever and malaise are rarely seen (Ref. 2). Outside of these reactions, no serious side effects have occurred in the tens of thousands of skin tests mentioned in the literature. There is no evidence for carcinogenic, teratogenic or mutagenic effects attributable to the skin test preparation. Little is known with reference to elimination of the test material by the host. The test material employed is free of live bacterial or other microbial agents. Tests are not made for viral or mycoplasma contamination and do not seem to be indicated.

The intracutaneous injection of 0.1 ml causes very little pain, infrequent bleeding, and is essentially noninjurious.

#### COCCIDIOIDIN BY CUTTER

1. *Product*, Coccidioidin manufactured by Cutter Laboratories.

2. *Description*. Cutter coccidioidin is a sterile standardized liquid prepared from a pool of culture filtrates of 57 *Coccidioides immitis* isolates. It is grown on synthetic medium containing L-asparagine as described by Smith (Ref. 1). The final product contains materials released from the mycelium of all 57 isolates. It is diluted in 0.9 percent USP sodium chloride to obtain the desired concentration equivalent to the Bureau of Biologics standard (1:100 or 1:10). Thimerosal to a final concentration of 1:10,000 is added and both products are supplied in 1.0 ml vials. No stabilizers or other adjuncts are added to the product. Coccidioidin diluent (which contains 0.5 percent phenol) is also sold for those who wish to prepare higher dilutions for skin test purposes. Cutter coccidioidin is recommended as a skin test reagent for detection of delayed skin reactivity in those individuals who have had immunologic experience with *Coccidioides immitis*.

3. *Analysis*—(a) *Effectiveness*. With regard to sensitivity (identification of all individuals with specific immunologic experience), there are data available that some individuals with pulmonary disease as well as others with generalized coccidioidomycosis fail to react to

<sup>1</sup>Cited BER (Biologics Efficacy Review) Volumes refer to submissions made by interested persons pursuant to the call for data notice published in the *FEDERAL REGISTER* of February 26, 1974 (39 FR 7445). The volumes will be available in accordance with the provisions of 21 CFR 601.25(b)(2) at the office of the Hearing Clerk, Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, MD. 20857.

coccidioidin and to other delayed skin test products (Refs. 2 through 6). Concerning specificity (ability to identify only individuals with specific immunologic experience), several studies suggest cross reactivity in patients infected with other fungi, particularly *Histoplasma capsulatum* as mentioned in the generic review (Refs. 3, and 7 through 9). Overall, there is little reason to believe that Cutter coccidioidin differs in specificity or sensitivity in any respect from that mentioned in the generic review.

(1) *Test material*—(1) *Chemical composition*. The glycoprotein and amino acid content of coccidioidin have been mentioned under "Chemical Composition" in the generic review (Refs. 10 and 11). All coccidioides isolates employed in the Cutter product were inoculated together in the initial batch 64D preparation and the final culture filtrate was prepared from a mixed mycelial growth. At present, Cutter grows 57 individual strains and combines their culture filtrates. What the contribution of any individual strain is to the final antigenic potency of the combined filtrates is not certain.

(2) *Reproducibility*. Little is known with regard to reproducibility from lot to lot. As indicated in the generic review, variation in batch potency of coccidioidin antigens has long been recognized (Ref. 1). However, lots prepared from any single batch would not be expected to vary except for human errors or batch deterioration. The manufacturer furnished several tables of reactions to simultaneous tests of two Cutter lots on five or six persons. Mean reaction diameters were very nearly the same for each of the three pairs of lots.

(3) *Stability*. Data from Cutter indicate that over a period of approximately 17 years Cutter's lot 64 bulk concentrate has deteriorated approximately 50 percent. The bulk concentrate for Cutter's new lot MO 42460 is reported to have lost approximately 40 percent of its potency in 2 years.

(4) *Standardization*. The manufacturer stated "every time a bulk product is made from the concentrate, 1:10 or 1:100 dilution, a sample of each and every bulk is taken for sterility and human skin tests. This is done to ensure that the potency is correct. If the potency is correct, the lot is released for filling and finishing. The final filled, labelled lot is again submitted for clinical test and must pass the test." Cutter also states that after combining strains and mixing, small samples of various dilutions are prepared and are "submitted to a physician for human skin testing and compared to the Bureau of Biologics coccidioidin standard 64D 2.5 as well as a portion of Lot (batch) 64D 2.5 maintained at the University of California that appears to maintain greater potency than that of the Bureau of Biologics reference 64D 2.5 that had been sealed into glass ampules. By this test it is determined what dilution of the concentrated mixed antigen produces the same degree of reaction as the Bureau of Biologics reference." Additional in-

formation submitted by the manufacturer in answer to a specific question regarding standardization reveals that each new lot is tested in humans known to have a positive coccidioidin skin test, and the reactions are compared with those produced by the glass ampule-sealed U.S. Reference Standard 64D 2.5 1:100 from the Bureau of Biologics, as well as the 64D 2.5 material that has been kept in California. A table of test results is supplied for the standardization of batch MO 39406: a dilution of 1:500 was tested in three persons, 1:1000 in one person, and 1:750 in three. One of the latter group was tested with the standard on the same day. For the 1:500 dilution, eight individuals were used, and four of these had simultaneous tests with the standard. Twelve persons were tested simultaneously with the standard and a 1:400 or 1:300 dilution of the new lot. No mention is made of readings of these tests by more than one observer or of "blind" readings. Many of the measurements showed a wide variation from one right angle diameter to the other. Nevertheless, when the two diameters of each reading of the 1:400 (6 tests) and 1:300 (6 tests) dilutions of the new lot and the 1:100 standard (16 tests) are averaged, the averages of these readings are roughly comparable (26.3 mm, 30 mm, and 24.3 mm, respectively) (Ref. 27).

(5) *Sensitization*. In a study of 53 subjects in 1960 using batch 64D coccidioidin, Rappaport and co-workers found no evidence of skin sensitization in individuals tested two to four times each (Ref. 12). However, a few reactors originally negative to 1:100 coccidioidin were noted to have regained reactivity to the 1:100 coccidioidin after having been tested with the more concentrated 1:10 or 1:1 antigen. The authors note that "this appears to be similar to the findings noted in studies of tuberculin sensitivity." Thus the material does not appear to be sensitizing in man at the dosage recommended but may augment waning sensitivity. In animal studies, Smith and co-workers inoculated as much as 1 ml of coccidioidin intracutaneously and 5 ml intraperitoneally on four occasions and could not sensitize guinea pigs in this manner (Ref. 13). Other investigators using rabbits and guinea pigs showed that inoculation with immunologic adjuvants could lead to subsequent cutaneous sensitivity plus antibody production (Refs. 14 through 16).

(6) *Elimination by host*. Virtually nothing is known with regard to host elimination of Cutter coccidioidin.

The hypersensitivity reactions to thimerosal mentioned in the Panel statement on "Thimerosal as a Preservative" might be expected with the Cutter product. In preparing greater dilutions of 1:1000 or 1:10,000 the diluent contains phenol rather than thimerosal and is less likely to cause allergic or irritant skin reactions.

(ii) *Test method*. (application, measurement and quantitation of reaction). The test is applied as a simple intracu-

I

taneous injection of the desired dosage. The skin reaction is round and indurated with reasonably clear boundaries as stated in the generic review. There is no reason to believe that the Cutter preparation differs in any of these respects since the same test method is employed. The quantitative skin test dose response is uncertain in man as in the case of the other commercial product, but as stated in the generic review the range of reaction sizes and dosages are probably adequate for dose response curve determinations if the method proposed by Wijsmuller is employed (Ref. 17).

(b) *Safety*—(1) *Host response*. There has been extensive use of this product in each marketed dilution (1:10 and 1:100), both in civilians and U.S. armed forces. One episode of anaphylaxis to an unspecified brand of coccidioidin has been reported in the literature (Ref. 18) and another reaction of this type has been reported to the manufacturer (Ref. 19). Fever and chills beginning 8 hours after skin testing and lasting up to 24 hours were also reported in one individual who had a large local response (Ref. 20). Smith and co-workers have reported precipitation or erythema nodosum with coccidioidin (Ref. 1), but even marked reactions to coccidioidin do not evidently reactivate old infections or worsen existing ones. Hersh and Benson reported one immediate wheal and erythema reaction as did Krudy and Hoff (Refs. 21 and 22). Similar reactions of this type have been noted by Smith and Pappagianis (Ref. 23). Some of these may have been due to thimerosal sensitivity rather than coccidioidin components. Considering the very large number of skin tests performed with coccidioidin, it would appear that it is a very safe skin test agent. As an example, in over 2,000 individuals tested in one recent series (Ref. 24), 988 were reactive to coccidioidin without any marked untoward reactions. The preparation has also been used to test newborn infants and pregnant women apparently without untoward reactions (Ref. 25). The Panel found no information concerning potential carcinogenic, teratogenic or mutagenic effects from this product.

(ii) *Test material*—(1) *Sterility*. Tests for viruses and mycoplasma are not indicated and the Cutter product appears to be free of other live microbial agents and bacteria which could be identified by the routine and specific sterility tests. The product cannot be certified as free of other contaminants such as extraneous microbial protein antigen. The characteristics of the culture medium make it unlikely that other toxic substances would be carried over into the filtrate. The preparation method also makes it unlikely that non-filterable agents will be present. The filtrate from each of the 57 strains employed in preparation of Cutter coccidioidin product is tested for sterility in fluid thioglycollate medium on blood agar plates and in several mice whose lungs, livers and spleens are cultured in Sabouraud-dextrose agar with

and without antibiotics at room and incubator temperatures.

(2) *Elimination by host and toxicity*. The extent and degree of Cutter coccidioidin elimination from the host is uncertain. By extensive human experience the Cutter product appears to be nontoxic.

(iii) *Test method*. The test produces very little pain or bleeding and is essentially noninjurious.

4. *Recommendations*. (a) The Panel recommends the product be placed in Category IIIA to remain on the market with the requirement that acceptable data based on scientifically sound methods be submitted to demonstrate efficacy in humans (Ref. 26). These data should include for each batch:

(i) Comparison of the product with the standard by means of dose response curves.

(ii) Distribution of reaction sizes in persons known to be infected and in those presumed to be uninfected with *C. immitis*.

(iii) Chemical characterization (including protein, carbohydrate, lipid and nucleic acid) should be performed to assess consistency of production.

(iv) Critical and detailed examinations of the stock strains of *C. immitis* must be made to ensure that they are not contaminated with other species of filamentous fungi whose filaments may be interlaced with those of the stock strain under the same cultural conditions (Ref. 27).

(v) Evidence should be furnished for stability of the material in the final container and the working dilution made therefrom (i.e. possible adsorption to glass or plastic).

(b) Two years is a reasonable time for the recommended testing to be accomplished.

(c) There are not sufficient data to determine if the presently distributed product is effective, i.e., the standardization of the present batch MO 39406 does not ensure that biologic activity in humans is equivalent to that of the standard.

(d) Furthermore, the Panel recommends that the following information in addition to that in the product brochure dated November 1973 should be included in the labeling:

(i) A positive reaction may cause a rise in the titer of complement fixation antibody to Histoplasma antigens, but not to coccidioidin.

(ii) A precaution against use in thimerosal sensitive subjects.

(iii) If used in individuals with erythema nodosum, the skin reaction may be violent.

(iv) Individuals infected with Histoplasma, Blastomyces, and possibly other fungi may react to this product.

(v) The product may boost the level of skin sensitivity to coccidioidin.

(vi) The skin test may be negative in severe forms of the disease or when prolonged periods of time have passed since infection.

## COCCIDIOIDIN BY IATRIC

1. *Product*. Coccidioidin manufactured by Iatric Corp.

2. *Description*. Iatric coccidioidin is a sterile culture filtrate obtained from nine selected isolates of *Coccidioides immitis*, which have been isolated in endemic areas of Arizona and California (isolates 61, 44, 14, 62, 37, 41, 60, and 43 are from the Arizona State Laboratories in Phoenix and an additional "Silvera" strain was obtained through the Naval Biological Laboratory in Oakland, California). The growth medium consists of a modification of the L-asparagine formula used to prepare tuberculin. Nine parts of this filtrate are mixed with one part of a solution containing 0.18 percent sodium bicarbonate, 0.85 percent sodium chloride, and 0.1 percent thimerosal to make the stock solution. This solution is diluted and tested in humans by comparison with the 1:100 dilution of the Bureau of Biologics coccidioidin standard for approximate equal degree of potency. This equipotent dilution is then referred to as the 1:100 dilution. The two dilutions which correspond to 1:100 and 1:10 of the standard Bureau of Biologics coccidioidin are those marketed by Iatric Corporation. One-ml vials which contain sufficient material for at least nine skin tests of 0.1-ml volume each are marketed. Iatric coccidioidin is used as a skin test antigen to detect individuals who have previous immunologic experience with *Coccidioides immitis*, via production of a delayed hypersensitivity skin response.

3. *Analysis*—(a) *Effectiveness*. In a comparison of this company's product with that of Cutter Laboratories in over 1,000 ninth grade students in San Diego, California, there were no marked differences in reactions produced by the two preparations; although it was suggested that if a negative reaction occurred with one product it "might be worthwhile to repeat the skin test with the other antigen." The manufacturer does not indicate who performed this study or whether or not it was published. It would seem

difficult from the data at hand to determine what proportion of individuals who have specific immunologic experience with *Coccidioides immitis* will react with Iatric coccidioidin. The specificity of Iatric's coccidioidin has not been tested in either animal models or man.

With regard to effectiveness in animal models, there is evidently only one paper reporting the use of the Iatric preparation. Among 74 mice infected with *Coccidioides immitis*, only 20 reacted to Iatric coccidioidin 21 days following infection (Ref. 1), and only 4 of 78 animals reacted at 10 days. The other papers submitted by the manufacturer dealing with animal models and using Iatric preparations have generally related to either the effects of coccidioidin on peritoneal exudate cell migration or to studies of coccidioidin in thymectomized mice. None of these papers bear on the effectiveness of Iatric coccidioidin as a skin test reagent (Refs. 1 through 4).

## CHARACTERISTICS OF EFFECTIVENESS

(i) *Test material*—(1) *Chemical composition*. The chemical composition of Iatric coccidioidin is not defined. The step by step manufacturing procedures are listed in reasonably clear fashion as mentioned earlier in the product description. There is no laboratory system used for standardization. For human testing, dilution of the filtrates from the individual strain fungal mats would appear to be the primary measurement of antigen content. No data are provided with regard to the relative contribution of the nine isolates which are used in the production of the skin test material.

(2) *Reproducibility*. There are no data directly bearing on reproducibility from lot to lot.

(3) *Standardization*. Iatric Corporation tests dilutions of the combined antigens in comparison with the Bureau of Biologics standard on more than five human subjects to determine the dilution which most closely approximates the standard (Ref. 8). The data provided by the manufacturer demonstrate remarkable agreement. Because of this unusually consistent agreement, it is unlikely that tests were performed in a scientifically acceptable manner. In fact, the agreement is closer than is normally found when the same preparation of tuberculin in the same dosage is given in different sites to the same subject (Ref. 5).

(4) *Stability*. Stability of one of their lots (No. 2AH) has been reported for samples after 1, 2, 3, and 4 years of storage tested in several individuals (a maximum of 10 and a minimum of 6 subjects) with fairly similar results. Each year the individuals were varied with some overlap. The skin test readings again showed remarkably little variability as discussed in the section on standardization.

(5) *Sensitization*. No data are provided by Iatric with regard to the ability of their specific product to augment the immune response or to sensitize after repeated injections of the recommended dosage.

(6) *Elimination by host*. Nothing is known about the product's elimination from the host outside of those reactions mentioned in the Generic Statement.

(7) *Diluent*. The hypersensitivity reactions to thimerosal mentioned in the Panel statement on "Thimerosal as a Preservative" might be expected with the Iatric product.

(ii) *Test method*. The test is administered by the Mantoux method and is presumably reasonably simple and accurate. These statements mentioned in the Generic Review should apply to the Iatric product.

(b) *Safety*—(i) *Host response*. The manufacturer claims to have no knowledge of any deleterious effects attributable to this product after having marketed hundreds of thousands of doses. No adverse reactions were described in the previously mentioned San Diego study (presumably unpublished but listed in Iatric's efficacy data report). The manufacturer provides little if any information as to safety of the product other than these anecdotal and unpublished data. The type of reaction to diluent materials, the possibility of exacerbating erythema nodosum, and the possibility of extremely rare anaphylactic reactions as previously discussed in the Generic Statement presumably apply to this product. With regard to safety data in animals, 1 ml of the Iatric preparation is injected into each of six mice and the animals sacrificed at 4 weeks. Doses of 3 ml per kilogram of body weight are inoculated into 3 rabbits. These animals are observed for any gross evidence of clinical disease over a period of 3 hours. A 0.5 ml volume of filtrate is injected into each of several mice. These animals are observed for any evidence of gross illness over a 1-week period. Five ml of filtrate are also injected into each of 2 guinea pigs which are observed over a period of 1 week. No harmful results were reported from these animal safety experiments. The Panel found no information concerning potential carcinogenic, teratogenic, or mutagenic effects from this product.

(ii) *Test material*—(1) *Sterility*. The test material is assayed for sterility in vitro in six tubes each of fluid thioglycollate medium and fluid Sabouraud medium. The cultures are incubated for a minimum of 11 days. Tests for viruses and mycoplasma are not indicated. The Iatric product appears to be free of other live microbial agents and bacteria which could be identified by the routine and specific sterility tests. The product cannot be certified as free of other contaminants such as extraneous microbial protein antigen, but the characteristics of the culture medium make it unlikely that toxic substances would be carried over into the filtrate. The preparation method also makes it unlikely that non-filterable agents will be present.

(2) *Host elimination and toxicity*. The method and extent of elimination of Iatric coccidioidin is unknown. It would appear to be nontoxic based on limited human skin testing experience.

(3) *Test method.* The test method produces very little pain or bleeding and is essentially noninjurious.

4. *Recommendations.* (a) The Panel recommends the product be placed in Category IIIA to remain on the market with the requirement that acceptable data based on scientifically sound methods be submitted to demonstrate efficacy in humans (Ref. 6). These data should include for each batch:

(i) Comparison of the product with the standard by means of dose response curves.

(ii) Distribution of reaction sizes in persons known to be infected and in those presumed to be uninfected with *C. immitis*.

(iii) Evidence that the product is stable until the expiration date.

(iv) Chemical characterization (including protein, carbohydrate lipid and nucleic acid) should be performed to assess consistency of production.

(v) Critical and detailed examinations of the stock strains of *C. immitis* must be made to ensure that they are not contaminated with other species of filamentous fungi whose filaments may be interlaced with those of the stock strain under the same cultural conditions (Ref. 7).

(vi) Evidence should be furnished for stability of the material in the final container and the working dilution made therefrom, i.e., possible adsorption to glass or plastic.

(b) Two years is a reasonable time for the recommended testing to be accomplished.

(c) Furthermore, the Panel recommends that the following information, in addition to that in the product brochure dated February 1974, should be included in the labeling:

(i) A positive reaction may cause a rise in the titer of complement fixation antibody to *Histoplasma* antigens.

(ii) A precaution against use in thimerosal sensitive subjects.

(iii) The product may cause cross reactions. Individuals infected with *Histoplasma*, *Blastomyces* and possibly other fungi may react to this product.

(iv) The product may boost the level of skin sensitivity to coccidioidin.

(v) The manufacturer must modify his present statement in the second paragraph to indicate that repeated injections of 0.1 ml coccidioidin in dilutions of 1:100 have not been found to invoke the production of humoral antibodies nor induce skin sensitivity to subsequent injections.

(vi) Recommend a change in the package insert in the second sentence of the third paragraph "Negative Reaction." It should read "A negative coccidioidin reaction in the presence of erythema nodosum makes the diagnosis of coccidioidomycosis unlikely."

#### HISTOPLASMIN

##### GENERIC STATEMENT

The term "histoplasmin" was first proposed by Zarattonis and Lindberg in 1941 to describe two antigenic preparations from the organism *Histoplasma capsulatum* (Ref. 4). One preparation consisted of a suspension of formalin-killed whole yeast cells and the other was a cell-free culture filtrate prepared from the mycelial phase of growth. Emmons recognized the need for a standardized antigen which he produced in a modification of the synthetic medium previously recommended by Smith for the production of coccidioidin (Ref. 5). Histoplasmin H-3, made from pooled lots of two different culture filtrates of 7-months-old static growth on this medium, was tested in sensitized guinea pigs and served as the original standard skin test antigen. Realizing that the supply of this reagent would soon be depleted, Shaw et al. pooled several lots of histoplasmin, compared the pooled material's potency in sensitized guinea pigs to that of the H-3 preparation, and designated the new batch H-15 (Ref. 6). Large scale epidemiological studies soon exhausted this supply and Howell prepared yet another lot, H-42, which was tested, standardized by comparative skin tests in over 12,000 persons, and designated as the current standard skin testing histoplasmin by the Division of Biologic Standards, now the Bureau of Biologics of the Food and Drug Administration. Although a variety of preparations have been employed in the production of skin test material from the organism, the term "histoplasmin" as currently used refers to the cell-free culture filtrate obtained from the broth medium supporting the growth of the mycelial phase of *H. capsulatum* at room temperature. There is considerable variation in batch to batch antigenic composition and potency of histoplasmin despite carefully controlled conditions of growth (Refs. 12 and 13). Stock concentrates are probably stable but significant

questions exist concerning the stability of diluted antigen preparations. The product seems to be safe, although all presently marketed preparations contain thimerosal, an organic mercurial which can sensitize. There is some question about the continued value of histoplasmin as a diagnostic agent, primarily because of the boost in antibody titer which may follow a positive test. This issue is discussed more completely in the detailed generic review.

#### PRODUCT REVIEW

Histoplasmosis is a fungus disease of man primarily involving the lungs and usually acquired by the inhalation of infectious particles of *Histoplasma capsulatum*. Although world-wide in distribution, there are certain highly endemic areas in which infection with this organism is common, although only a small proportion of those infected develop overt disease recognized as histoplasmosis. The disease is not transmitted from person to person.

*Histoplasma capsulatum* is a dimorphic organism. On laboratory medium incubated to 25° to 27° C it exists as the filamentous (mycelial) phase as it does in soil. In the tissues of the infected mammalian host it exists as a yeast. Various preparations of culture filtrate from each of the two phases have been used to prepare antigens for serologic analysis and for skin tests useful as aids in diagnosis.

The disease was first described in 1906 by Samuel T. Darling (Ref. 1), who considered the organism to be a new pathogenic protozoan resembling *Leishmania*. The mycotic nature of the parasite, suspected in 1912, was confirmed in 1934. Between the years 1906 and 1934 only seven human cases of histoplasmosis, all fatal, had been recorded in the literature. By 1945, the list had grown to 71 cases throughout the world, but 79 percent had occurred in the United States, mostly in residents of the Mississippi and Missouri River valleys. The concept of histoplasmosis as a rare and almost always fatal mycotic disease was shattered in 1945 by the studies of Christie and Peterson (Ref. 2) and by Palmer (Ref. 3) which demonstrated the true prevalence of histoplasmosis mainly by the use of the histoplasmin skin test reaction.

Histoplasmin is the cell-free culture filtrate obtained from a chemically defined broth medium after several months of growth of the mycelial phase of *H. capsulatum* at room temperature.

(a) *Effectiveness.* The sensitivity of the histoplasmin skin test in identification of infected individuals is relatively high. Within 3 or 4 weeks after the onset of acute or epidemic histoplasmosis the rate of positive reactions is almost 100 percent (Ref. 7). In chronic pulmonary disease, however, the rate is approximately 80 percent (Ref. 8). As in other granulomatous diseases, the disseminated form may be accompanied by a negative skin test with the homologous antigen. The skin test will be negative also in individuals who have a state of general anergy as a

result of suppressed immunity by disease or drug administration.

The reaction is not highly specific. There are extensive cross-reactions in individuals and animals sensitized to the other dimorphic fungi, especially *Blastomyces dermatitidis* and *Coccidioides immitis* (Refs. 5 and 9). Hopes for a more specific antigen have been stimulated by several investigators. Two major antigens, "h" and "m", have been purified and characterized serologically (Ref. 10). Sprouse succeeded in separating the skin test reactive materials by polyacrylamide disc electrophoresis and found a fraction which would not cross-react with *Blastomyces* (Ref. 11).

#### CHARACTERISTICS OF EFFECTIVENESS

(i) *Test material.* Individual lots of the test material may vary widely in antigenic composition and potency despite carefully controlled conditions of growth (Refs. 12 and 13). The antigenic composition of histoplasmin is very complex and the significance of the various antigenic fractions found in different lots of histoplasmin is poorly understood. With the agar gel immunodiffusion technique, Heiner demonstrated two significant precipitins. The "h" antigen was precipitated by an antibody associated with active infection and recent disease, whereas the "m" antigen was demonstrated by an antibody persisting from inactive disease and sometimes appearing in the anamnestic response after a positive skin test (Ref. 14). The immunogen responsible for this anamnestic response has been partially purified and characterized as the "m" reactive component. Histoplasmins deficient in the "m" antigen may not induce this humoral antibody response (Ref. 22).

The chemical composition of the skin reactive material has not been determined accurately. Some investigators considered it to be polysaccharide in nature, while others claimed that it was a protein-carbohydrate complex. Recent information indicates that the active material is either protein (Ref. 15) or complexes of protein and carbohydrate (Ref. 25).

Standardization of histoplasmin can be readily accomplished since there is a standard reference material available through the Bureau of Biologics, and there is no trouble in finding sensitized individuals. The relation between the guinea pig model and the human model needs to be established.

The stability of the stock concentrated material is good. Storage at 5° C over a period of several years does not appear to decrease its potency. The diluted antigen, on the other hand, is less stable and the loss of potency is directly related to the temperature of storage. No data are available regarding the extent of adsorption to glass or plastic and the possible influence of a stabilizing agent such as polysorbate-80. This information is badly needed.

Repeated skin tests with histoplasmin do not induce delayed hypersensitivity. Even a single positive test, however, may augment or boost the titer of certain humoral antibodies. The following is a

summary of many reports that deal with this subject (Refs. 16 and 17). The appearance of significant increase of complement fixing (CF) titer to the histoplasmin antigen after a positive skin test was noted in from 3 to 58 percent of subjects. Most of the studies indicated a 20 to 30 percent rate. The maximum titers so produced varied from 1:8 to 1:256, but the usual titers were 1:8 to 1:32. Boosts to the yeast phase antigen, on the other hand, were distinctly less common, the rate varying from 0 to 14 percent. Maximum antibody levels were noted in 2 to 3 weeks following the test and they persisted for as long as 6 months. No increases were noted before the 5th day. The appearance of "m" band precipitins was noted in 12 to 90 percent of subjects after a single positive skin test.

A negative skin test very rarely causes an antibody response. A summary of 6 reports reveals that none of 313 subjects with negative skin tests had an antibody response by complement fixation to a histoplasmin antigen, and less than 1 percent of 312 subjects showed such a response to a yeast phase antigen (Refs. 17 and 18).

Questions have been raised (Ref. 19) about the advisability of continued use of histoplasmin as a diagnostic aid because of the boost in antibody titer which may follow a positive skin test (see above) and because the skin reactions to histoplasmin may not be sufficiently specific. These objections are especially applicable in areas of high endemicity where the vast majority of adult residents have positive skin tests and where serological studies would have greater diagnostic value. Conversely, there are several considerations which support the usefulness of the skin test for the evaluation of the possibility of histoplasmosis in the individual patient. The physician who uses histoplasmin for this purpose must be aware of its shortcomings. A reliable initial result can be obtained from serum taken either before or within a few days of the recognition of a positive test.

The skin test is a procedure that can be done and observed by the physician himself within 48 hours. The CF test results, on the other hand, usually involve a delay of 1 to 3 weeks because standardized antigens are not widely available in local laboratories. In areas of low endemicity it may be easier to do mass skin testing to quickly recognize outbreaks of acute histoplasmosis than to collect serum, transport it to a central laboratory, and await the CF test results.

Although histoplasmin is not as useful in diagnosis as it was once thought to be, it may serve an important purpose in the evaluation of pulmonary nodules. In areas of high endemicity a negative skin test is strong evidence against histoplasmosis, while a positive histoplasmin along with a negative tuberculin test in an area of low endemicity constitutes suggestive evidence in favor of histoplasmosis.

Finally, the considerations that determine the relative value of the skin test versus the serologic tests for diag-

nosis in an individual patient are those of epidemiologic and clinical nature together with the ready availability of a laboratory capable of performing accurate serologic tests for histoplasmosis.

There is no information on the rate or the mechanism of elimination by the host. Since the antigen is produced in a chemically defined medium the product should be nonsensitizing and non-reactive except for the possible influence of an added preservative.

(ii) *Test method.* The test can be administered either by the Mantoux method or by a multiple puncture time device. The former procedure allows a measured amount of test material to be injected, the latter introduces an unknown amount. The Mantoux method is not difficult, while the multiple puncture device procedure is even simpler. In both instances, the reactions have clear-cut borders and are usually round, although the time procedure may produce irregular reactions as a result of partial coalescence of reactions about individual puncture points. Quantitative dose response studies are possible with the Mantoux method (Ref. 23), but are difficult with the time application because of uncertain dosage and a discontinuous distribution of reaction sizes. The reaction usually appears in 24 hours, reaches a maximum at 48 to 72 hours and slowly subsides.

(b) *Safety.* Thus far, experience with this test material reveals no safety problems in regards to anaphylaxis, constitutional symptoms, carcinogenic effects, teratogenic effects, mutagenic effects, sensitization to product, skin irritation, and reactivation of disease. Severe skin reactions are liable to occur in highly sensitive individuals just as in the tuberculin skin test.

The test material may be rendered free of live microbial agents in the usual manner and sterility tests may be performed to ensure this freedom. The method of manufacture is not likely to introduce viral or mycoplasmal agents. There is no information on the elimination of the test material by the host. There is no evidence to suggest toxicity of the test material. There should be no particular problem with the test method since it is the standard intracutaneous injection of a small amount of material. The test procedure causes very little pain or bleeding and its essentially noninjurious.

Since 1968, it has been known that mycelial fungal mats and colonies thought to be pure cultures of *H. capsulatum* may, in fact, be contaminated with fungi which are not sufficiently different in color or texture to be grossly distinguished from *H. capsulatum* (Ref. 24). The filaments of such fungi interlace with those of *H. capsulatum* in the same colony and cannot be separated except by very special mycological methods which have not been taken into account either in the preservation and maintenance of the stock cultures from which the histoplasmins were prepared or in the "purity" of the "uncontaminated" histoplasmins themselves. This omission is critical for the "histoplasmins" prepared for in-

jection by the Mantoux method but even more serious for "histoplasmins" that are concentrated 25 to 35 times and delivered much less accurately via multiple puncture devices.

## HISTOPLASMIN BY PARKE-DAVIS

1. **Product.** Histoplasmin manufactured by Parke, Davis and Co.

2. **Description.** Histoplasmin produced by Parke, Davis and Company is derived from a culture filtrate of *Histoplasma capsulatum*, strain M-1217, (PD No. 4799) originally C. W. Emmons' strain #6510. The filtrate comes from growth in a chemically defined L-asparagine broth medium after 1 to 6 months of incubation. Phosphate buffer, pH 7.4, containing sodium citrate and phenol 0.5 percent, is supplied separately as the diluent. For use as a skin test the concentrated material is diluted 1:100 with 1.0 ml of the buffer. The final diluted product contains 0.0001 percent thimerosal. A red dye (FD & C Red No. 2) at a concentration of 1:700,000 is added to assure the user that histoplasmin is present in the container.

3. **Analysis—(a) Effectiveness.** No specific data are furnished on the ability of Parke-Davis histoplasmin to identify all individuals who have had previous immunologic experience with *Histoplasma*. A study by Furcolow in 1950 (Ref. 1) submitted to the manufacturer demonstrated that the results with Parke-Davis lot H-11 were comparable to those obtained with the reference standard preparation H-42 in approximately 160 persons. The raw data in terms of average size of skin reaction were not made available and one cannot evaluate the conclusions of the author. New production batches and subsequent lots are standardized against U. S. Reference Standard, No. 1 by a 4x4 design on 3 to 5 guinea pigs. There is no standardization of these batches or lots in the human model. As noted in the generic review, the guinea pig model has not been correlated with the human model.

No data are provided on the specificity of the Parke-Davis product for skin testing. The generic review indicates that histoplasmin is known to be reactive in individuals infected with other fungi, especially blastomycetes and coccidioides. Identity tests have been done by Parke-Davis in guinea pigs sensitized with histoplasmin, blastomycin, and tuberculin. No data are provided but the statement is made that "the homologous test anti-

gen yielded responses equivalent to the homologous standard while the heterologous test antigens elicited little or no response." The lots of the heterologous test antigens were not noted.

## CHARACTERISTICS OF EFFECTIVENESS

(i) **Test material.** The product is not chemically defined but a test for identity is done by thin layer silica gel chromatography followed by ninhydrin staining. By this means it is said that the product can be distinguished from blastomycin; however, there is no evidence that this correlates with specificity in the human or animal model.

No data are presented on reproducibility from lot to lot except that the chromatographic analysis is reproducible.

The potency of each lot is estimated from a comparison of the responses obtained by the intracutaneous injection into appropriately sensitized guinea pigs of a sample of the lot under test and of the histoplasmin reference standard. The material is then diluted with phosphate buffer to give a potency of within 20 percent of that of the reference standard. No tests have been performed to correlate the guinea pig system with a system for estimation of potency in humans.

The product is stable in the undiluted form at least 1 year at 1° to 5° C.

No information was provided regarding the induction of delayed hypersensitivity or the boosting of humoral antibody titers by this product.

No data were available on elimination from the host.

The diluent contains thimerosal. The Panel's comments regarding the sensitizing capacity of thimerosal apply to this product. See the statement on "Thimerosal as a Preservative."

(ii) **Test method.** The test material is given by the simple and accurate Mantoux method.

The reactions are usually round and have a clear-cut boundary.

There is sufficient range of reaction size for dose response studies. This information comes mainly from the generic review since the only information on this subject furnished by Parke-Davis is a series of studies done by Furcolow in 1950. While no data on the actual reaction sizes were given, the proportions of patients with a positive test to three different dilutions of the Parke-Davis H-11 product indicated that quantitative dose response studies were possible.

The company recommends that the reaction be read in 24 to 48 hours.

(b) **Safety—(i) Host response.** There has been extensive use of this product (several million doses) with a reported minor reaction rate of 1 per 1.4 million doses sold. The nature of these reactions was not specified. Very little information is provided on the long-term safety of the red dye, FD&C Red No. 2. Except for the current suspicion about the carcinogenic potential of the dye, the Panel found no other information concerning the potential carcinogenic, teratogenic, or mutagenic effects from the Parke-Davis product.

(ii) **Test material.** By the required sterility tests, the final product contains no viable bacteria or fungi. It is not likely that other living or dead contaminants would be present, but tests for these contaminants have not been done.

The material appears to be nontoxic.

(iii) **Test method.** The test method produces very little pain or bleeding and is essentially noninjurious.

4. **Recommendations.** (a) The Panel recommends that the product be placed in Category IIIA to remain on the market with the requirement that acceptable data based on scientifically sound methods be submitted to demonstrate efficacy in humans (Ref. 2). These data should include for each batch:

(i) Comparison of the product with the standard by means of dose response curves.

(ii) Distribution of reaction sizes in persons known to be infected and in those presumed to be uninfected with *H. capsulatum*.

(iii) Chemical characterization (including protein, carbohydrate, lipid and nucleic acid) should be performed on each to assess consistency of production.

(iv) Critical and detailed examinations of the stock strains of *H. capsulatum* must be made to ensure that they are not contaminated with other species of filamentous fungi whose filaments may be interlaced with those of the stock strain under the same cultural conditions (Ref. 3).

Further data should also include:

(v) Evidence should be furnished for the long-term safety of the additive red dye or the dye should be eliminated from the product.

(vi) Evidence should be furnished for stability of the material in the final container and the working dilution made therefrom (i.e. possible adsorption to glass or plastic).

(b) Two years is a reasonable time for the recommended testing to be accomplished.

(c) The Panel also recommends that the following information, in addition to that in the product brochure dated October 1972, should be included in the labeling:

(i) Blood for serological studies (if clinically indicated) should preferably be drawn prior to administering the skin test but may be obtained within 48 to 96 hours after the test administration because a positive skin reaction may be associated with a rise in titer after that lapse of time.

(ii) It would be better to state that "the reaction should be described and measured in terms of mm of induration and degree of reaction (from slight induration to vesiculation and necrosis). In many studies reported in the literature a reaction of 5 mm or greater is considered to be positive. In case of doubt the test should be repeated but only after obtaining serum for antibody titer (if clinically indicated)."

## HISTOPLASMIN BY LEDERLE

1. **Product.** Histoplasmin (Histoplasmin Tine Test) manufactured by Lederle Laboratories.

2. **Description.** The product consists of a plastic applicator with an attached stainless steel base containing four lines approximately 2 mm in length. A preparation of stabilized histoplasmin is applied to these lines by mechanically dipping and drying. A removable plastic cap is attached and the entire applicator is sterilized by ethylene oxide gas.

The histoplasmin initially is made from three strains of *Histoplasma capsulatum* which include two soil isolates (Mexico, Mo. and Mason City, Iowa) and one human strain (A811 from the Center for Disease Control). The production medium is a semi-synthetic asparagine broth in flasks in which the strains are incubated separately 4 to 6 months at room temperature. The same number of flasks is inoculated with each strain. Each flask is examined for contamination at harvest and the contaminated flasks discarded. Equal numbers of flasks of each strain are not taken from the remaining flasks to reestablish the original exact proportion, since the inequality is slight. It is not stated how equality is determined; simply that all of the flasks with non-contaminated broth are used. The broths are then pooled, filtered, concentrated approximately 25 to 35 times, and "stabilized" with 4 percent gum arabic plus 8 percent dextrose.

In a letter of February 11, 1975, the manufacturer replied to the questions "In what way are the production culture flasks examined for identification of the organism? Was the identification macroscopic or were mycological identification techniques employed? If so, what methods were used?"

Answer. "After the culture flasks are inoculated with their respective isolates, all flasks are incubated for approximately 6 months, at which time all growth activity seems to be at a standstill. Each flask is removed from the shelf and given an identification number and is treated as a separate lot. Each flask is examined grossly, and 0.5 ml is cultured for purity on yeast agar medium plates. All flasks that do not grow out *Histoplasma* (sic) capsulatum on the yeast agar plates are examined directly, and a microscopic identification of *Histoplasma* (sic) capsulatum is made.

"The examination methods are microscopic and colonial, in which the morphology of the organism and the characteristic growth of the colonies are primarily used for identification. Methods used are those recommended by Professor Michael L. Furcolow, M.D., of the University of Kentucky.

"It is believed that the reason an occasional flask does not produce growth when inoculated on yeast extract agar

at harvest time is that growth is inhibited by metabolic waste products that are often toxic to the culture."

3. **Analysis—(a) Effectiveness.** The product information supplied by Lederle contains a summary of eight published studies that compared the results of the tine test with those of the Mantoux test using commercially available histoplasmin at a dilution of 1:100. The results were variable with a reported 0 to 26 percent false negative and 0 to 13 percent false positive rate of the tine test when compared with the Mantoux test. In a later study by Perkins and Saslaw (Ref. 3) a complete correlation between the two tests was found in 34 patients with positive reactions and in 66 with negative reactions. In this study, however, hand-dipped tines were used rather than commercial tines.

No information on cross-reactions was provided.

(i) **Test material—(1) Chemical composition.** The chemical composition was not defined in any way.

(2) **Reproducibility.** No data were provided on the lot-to-lot reproducibility.

(3) **Standardization.** The material described as "bulk unconcentrated" is currently being standardized in guinea pigs previously sensitized with "concentrated" histoplasmin suspended in Freund's complete adjuvant. The "bulk unconcentrated" is adjusted (diluted) to compare with reactions elicited by Histoplasmin U.S. Reference, Lot No. 1, administered to guinea pigs by the Mantoux technique. The correlation of this laboratory test with a similar system in man is presented in the product information brochure in a single publication by I. R. Long of the Southern Food and Drug Research, Inc. and three other workers from Lederle Laboratories (Ref. 4). This was a report of a well-controlled comparison of test histoplasmin material with a 1:100 dilution of the Reference Standard in 200 individuals. Preliminary guinea pig tests showed that the test material was approximately three times as potent as the standard so that a 1:300 dilution of the test material was used. The reactions were read in blind fashion by four different readers. There was good correlation between positive and negative reactions using 5 mm as a criterion of positive, and between the average reaction sizes.

Standardization of the dried material on the tines, however, poses a more formidable problem. A complicated mathematical scheme is presented for estimating the potency (quantitative analysis) of the material eluted from the tines as determined by comparative Mantoux tests in sensitized guinea pigs. The object is to make the potency on each tine approximately 1/100 of that of the reference standard.

(4) **Stability.** No data were furnished on the stability of the product.

(5) **Sensitization.** It was shown by Long et al. (Ref. 4) that repeated tine tests did not induce skin sensitivity, but there is no information given regarding augmentation of the humoral antibody response. Presumably this would be the

same as or greater than that established for the intradermal test for histoplasmosis. (See the Histoplasmin Generic Review.)

(6) *Elimination by host.* There were no data on elimination by the host.

(7) *Diluent.* Reactions from the diluent may be those associated with thimerosal which varied from 1.57 to 2.4 mg/ml in the two bulk histoplasmin lots (2250-14 and HL-76) on which thimerosal assays were performed. Since 2500 times (or 625 time tests) require 1 ml histoplasmin, it is calculated that the times from these lots contain 0.16 and 0.24 microgram thimerosal per time, respectively. No thimerosal assays are done on the actual time test units. No studies with thimerosal applied by the time have been done in either animals or humans. The Panel's comments regarding the sensitizing capacity of thimerosal apply to this product. See the statement on "Thimerosal as a Preservative".

It was not felt that the gum arabic required for stabilizing histoplasmin for adherence to the times would produce systemic reactions, nor that the rare local reaction which might occur (usually within one-half hour) would interfere with the reaction to the histoplasmin on the time which is maximal at 48 or 72 hours.

(ii) *Test method.* One of the main advantages of the multiple puncture device is that its application is simple even for nonprofessional personnel and the material does not need to be refrigerated. The area of induration is usually round although partial coalescence of reactions around individual times may produce an irregular area. None of the available reports indicates any difficulties in measurement. The range of reaction sizes is more limited than for the Mantoux technique. Inability to control the dosage and the discontinuity in the distribution of reaction sizes resulting from coalescence of reactions around individual times make dose-response studies difficult. No information on the duration of reaction was given except the recommendation that the test be read at 48 to 72 hours.

(b) *Safety.*—(i) *Host response.* Relatively limited use of this product prior to 1970 has revealed no evidence of anaphylaxis, constitutional symptoms, carcinogenic effects, teratogenic effects, mutagenic effects, sensitization to product, pain, scarring, change in pigmentation, reactivation of disease and interference with action of other medications. There were some reports in 1969 which led to the following medical advisory evaluation. "Some individuals may be extremely sensitive to the test and develop skin ulceration. Such reactions are not known to result in permanent scars."

(ii) *Test material.* Adequate sterility tests have not been done to rule out fungal contamination especially those species which produce colonies macroscopically similar to *H. capsulatum*. Viral and other nonbacterial living contaminants would not be expected. There is no information on freedom from non-living contaminants. There is no infor-

mation on elimination of the test material by the host. The material is not toxic by human experience and by the prescribed toxicity tests in two mice and two guinea pigs.

(iii) *Test method.* The test produces very little pain or bleeding and is essentially noninjurious.

4. *Recommendations.* (a) The Panel recommends that this product be placed in category IIIB with the license for the product to be suspended. Considerations leading to this recommendation include:

(i) The product has poor sensitivity and specificity.

(ii) There is no chemical definition of the product.

(iii) There are no data on lot-to-lot reproducibility, especially with regard to the potency of each lot of times as they are used in humans.

(iv) There are no data on the stability of the time material.

(v) Critical and detailed examinations of stock strains of *H. capsulatum* must be made to ensure that they are not contaminated with other species of filamentous fungi whose filaments may be interlaced with those of the stock strain under the same cultural conditions (Ref. 2).

(b) Before the license is reinstated the manufacturer must provide acceptable data based on scientifically sound methods to demonstrate:

(i) Lot-to-lot reproducibility of the final product (time) in either a human or a human/animal model.

(ii) Stability of the final product.

(iii) Standardization in humans for future batches.

(iv) The effect of the time skin test on the augmentation of humoral response to Histoplasma antigens and other fungal antigens.

(v) The degree of cross reactivity in geographic areas known to be highly endemic for other fungus diseases, e.g., coccidioidomycosis, paracoccidioidomycosis.

(vi) Because of the possibility that the mechanical dipping process may fail to deposit histoplasmin on the times of individual units, routine evaluation of the final product should include a test for protein, mercury, or other test material on the times of randomly selected individual units.

(c) Furthermore, the Panel recommends that the following revisions to the product brochure dated October 1968 and advertising copy submitted by the company should be made:

(i) Add a statement indicating that this product is not as effective as other intracutaneous histoplasmin products.

(ii) Delete the statement "should be routine for hospitalized patients."

(iii) Delete the statement "should be routine office procedure in all endemic areas."

(iv) Delete the statement "should be done concurrently with Tuberculin testing."

(v) Delete the statement "should be done routinely in nonendemic areas where there is a large transient population."

## HISTOPLASMIN BY MICHIGAN DEPARTMENT OF PUBLIC HEALTH

1. *Product.* Histoplasmin manufactured by Michigan Department of Public Health.

2. *Description.* Histoplasmin produced by the Michigan Department of Public Health is a 1:400 dilution of a culture filtrate of the mycelial form of *Histoplasma capsulatum* grown for 3 months at 25° C in a chemically defined broth medium (modified Dorset-Henley liquid medium). The diluent is a glycine-glycerol-sodium chloride solution at pH 7.3 containing 0.0025 percent thimerosal. Strain 6507 (MDPH No. 1435), originally obtained from C. W. Emmons of the NIH, serves as the seed culture. The parent (batch) histoplasmin is prepared from several flasks, each containing 100 ml of medium. A batch is prepared once every 1 to 10 years from which 3 lots of 3.5 liters each are prepared annually. The final product requires no further dilution.

3. *Analysis.*—(a) *Effectiveness.* The generic review provides a discussion on the sensitivity of histoplasmin. The Michigan Department of Health product was found to be comparable to the standard histoplasmin in 1953 when their lot No. 14 in a dilution of 1:400 was studied in 33 human volunteers, all of whom were positive reactors. Also submitted is an abstract of a paper in which it was reported that there was a 61 percent prevalence of histoplasmin reactivity in 1,324 children of Milan, Michigan, compared to a rate of 8.2 percent in over 7,000 children in other parts of the county. The Michigan Department of Health histoplasmin was used in that study.

No data were submitted for specificity (See Generic Review for discussion).

CHARACTERISTICS OF EFFECTIVENESS

(1) *Test material.*—(i) *Chemical composition.* The chemical composition is not defined in any way.

(2) *Reproducibility.* No data were submitted on the reproducibility from lot-to-lot.

(3) *Standardization.* The Michigan material is tested for potency in guinea pigs sensitized with a mixture of "concentrated" histoplasmin together with complete Freund's adjuvant. The reactions are compared, not with the standard histoplasmin, but with "a histo-

plasmin solution equivalent in potency to 0.1 ml of a 1:100 dilution of the reference histoplasmin." Comparison of the guinea pig system to the human system is not provided directly, but lot No. 14 which was diluted to make it equally potent with the standard according to the guinea pig test was actually found to be equally potent in 24 sensitized individuals in 1953.

(4) *Stability.* No data were submitted on the stability of the product. The statement is made that "diluted histoplasmin has an expiration period of six months," but no documentation is presented. In answer to questions about stability the manufacturer states that (i) Studies done in 1954-55 in humans confirmed the stability of the final product for at least 6 months. (ii) No studies have been done to determine the amount of histoplasmin adsorbed to glass and plastic.

Further information on stability and lot-to-lot reproducibility is provided in answer to a specific inquiry. Lots 21 and 31 "in use in Michigan since 1959" were tested for potency in 4 to 6 sensitized guinea pigs, using 4 to 5 two-fold dilutions and compared with similar dilutions of reference standard histoplasmin lot No. 1. Lot 21 remained stable and comparable to the reference standard in 1959, 1962, and 1965; lot 31 was equipotent to the standard in 1968, 1971, and 1974.

(5) *Sensitization.* The sensitizing properties of histoplasmin are discussed in the generic review. The Michigan Department of Health provided no information on this subject for their product.

(6) *Elimination by host.* No data were presented on elimination from the host.

(7) *Diluent.* There was no information provided regarding the sensitizing or reaction-producing properties of the diluent except the general statement that there have been no reports of adverse reactions after the distribution of well over half a million skin test doses. The diluent contains thimerosal. The Panel's comments regarding the sensitizing capacity of thimerosal apply to this product. See the statement on "Thimerosal as a Preservative".

(ii) *Test method.* The test is given by the Mantoux method which is simple and accurate. The data indicate that a positive reaction is usually round and has a clear-cut boundary.

No data were presented about a dose response relation, but information from the generic review indicates that there is a sufficient range of reaction size with other histoplasmins.

The data presented indicate that the reaction remains for at least 72 hours.

(b) *Safety.*—(i) *Host response.* No specific data were submitted regarding any short- or long-term side effects. Well over half a million doses were distributed in the state of Michigan since 1954 without any adverse reactions having been reported to the Michigan Department of Health. The Panel found no information concerning potential carcinogenic teratogenic or mutagenic effects from this product.

(ii) *Test material.* Adequate tests for absence of viable fungi were documented. Sterility tests are performed on the parent histoplasmin and on the product after final dilution. No details were given but presumably the procedures are those required by the Bureau of Biologics. Tests for other living microbial agents and other contaminants do not appear to be necessary since the product is derived from a synthetic medium.

There was no information on elimination by the host.

The product is not toxic by the human experience outlined above. The test for toxicity in animals does not meet the standards set by the Bureau of Biologics, according to the data originally submitted, but the manufacturer stated later that the safety tests do conform to the standards of the Bureau of Biologics (21 CFR 610.11). Eight mice are injected intraperitoneally with the parent material, but this is done primarily to confirm the absence of pathogenic fungi. Guinea pig inoculation is not mentioned. In Section IV, under the topic "animal safety data" (Ref. 3) reference is made to a general safety test on the finished product presumably according to regulations for the manufacture of biologic products (21 CFR 610.11).

(iii) *Test method.* The test produces very little pain and is essentially noninjurious.

4. *Recommendations.* (a) The Panel recommends the product be placed in Category IIIA to remain on the market with the requirement that acceptable data based on scientifically sound methods be submitted to demonstrate efficacy in humans (Ref. 1). These data should include for each batch:

(i) Comparison of the product with the standard by means of dose response curves in humans.

(ii) Distribution of reaction sizes in persons known to be infected and in those presumed to be uninfected with *H. capsulatum*.

(iii) Chemical characterization (including protein, carbohydrate, lipids and nucleic acids) should be performed to assess consistency of production.

(iv) Critical and detailed examinations of the stock strains of *H. capsulatum* must be made to ensure that they are not contaminated with other species of filamentous fungi whose filaments may be interlaced with those of the stock strain under the same cultural conditions (Ref. 2).

In addition, the data should include evidence for stability of the material in the final container (i.e. possible adsorption to glass or plastic).

(b) Two years is a reasonable time for the recommended testing to be accomplished.

(c) Furthermore, the Panel recommends that the following information in addition to that in the product brochure dated October 1966 should be included or revised in the labeling:

(i) Blood for serological studies (if clinically indicated) should preferably be drawn prior to administering the skin test but may be obtained within 48 to 96

hours after the test interpretation (48 hours reading) because a positive skin reaction may be associated with a rise in titer after that lapse of time.

(ii) It would be better to state that "the reaction should be described and measured in terms of mm of induration and degree of reaction varying from slight induration to vesiculation and necrosis. In many studies reported in the literature a reaction of 5 mm or greater is considered to be positive. In case of doubt the test should be repeated but only after obtaining serum for antibody titer (if clinically indicated)."

(iii) Delete paragraph 2 under "RECOMMENDATIONS FOR USE" which states "the use of this product should be limited to surveys and as a diagnostic aid for those persons who have disease or X-ray findings suggestive of tuberculosis, but who are tuberculin negative."

(iv) The fourth sentence of the first paragraph under "Description of Product" should read, "As distributed, it gives skin reactions equivalent to those produced by 0.1 ml of a 1:100 dilution of the U.S. Reference Standard."

## LYMPHOGRANULOMA VENEREUM SKIN TEST ANTIGENS

## GENERIC STATEMENT

Lymphogranuloma venereum (LGV) skin test antigen is prepared as an extract of embryonated chicken egg yolks infected with *Chlamydia trachomatis*. Delayed type skin reactivity appears in patients 12 to 40 days after appearance of the primary lesion and may be present for life. Skin reactions may be positive in patients with other Chlamydial infections which include trachoma, conjunctivitis, and pneumonitis.

LGV skin tests are not positive in all patients with proven immunologic experience with the Chlamydial agent or in all cases with proven lymphogranuloma venereum. A complement fixation test is available and is more sensitive than the skin test. Nonspecific reactions necessitate the use of control materials, because both the antigen and control come from living eggs that may be presumed to contain contaminating egg antigens and may also contain biologically important material not currently known or tested for. No satisfactory method of standardization exists.

## PRODUCT REVIEW

Lymphogranuloma venereum is a venereal disease characterized by the appearance of a painless, small, often overlooked, genital vesicle which is followed in 1 to 2 weeks by painful swelling, and suppuration of the inguinal and femoral lymph nodes (called venereal buboes), with later production of multiple drain-

ing sinuses. From direct rectal infection coupled with the formation of scar tissue and obstruction of lymphatic channels, the complications of edema of the external genitalia, proctitis, and rectal stricture may occur years later. Disease is usually transmitted by sexual contact. The incubation period is from 7 to 14 days. The cause of the disease is *C. trachomatis*. Chlamydiae are very small microorganisms previously believed to be viruses. Their nonviral nature has been recently shown by the finding that cells possess both DNA and RNA, multiply by binary fission, possess a bacterial type of cell wall, and are inhibited in their growth by several antimicrobial agents which have no effect on viruses. Other diseases associated with *C. trachomatis* are trachoma, inclusion conjunctivitis, and mouse pneumonitis. The other species of Chlamydia, *C. psittaci*, causes ornithosis in man and many diseases in birds and mammals. Organisms of the *C. trachomatis* species are sulfonamide sensitive and possess iodine positive inclusions (glycogen-containing) whereas cells of *psittaci* species are sulfonamide resistant and their inclusions are iodine negative. Infections with both species of Chlamydia tend to involve both the mucous membranes of the eye and of the genitalia.

A skin test agent prepared from purulent material aspirated from unruptured LGV buboes was first employed by Frei in 1925 (Ref. 1). The pus mixed with a 4 to 6 fold excess of sterile saline was placed in a water bath at 60° C for 2 hours on 2 successive days. After examination for sterility, 0.5 percent phenol was added to the preparation as a preservative. The Frei test consists of placing 0.1 ml of the antigen into the skin of the flexor aspect of the forearm; a positive reaction was defined as a papule of at least 7mm in diameter appearing in 72 hours at the site of injection. In some cases, the papule did not appear for 5 to 8 days and it was advised that the patient be seen at intervals up to 1 week after the performance of the test. Since sufficient pus from patients was difficult to obtain, infected brains of animals were subsequently employed as antigen (Ref. 2). Because of the large percentage of false positive reactions resulting from use of infected mouse brains, chick embryo antigen prepared according to the method of Rake et al. (Ref. 3) became the most widely used skin test antigen.

The currently available antigen for lymphogranuloma venereum is prepared from Chlamydia-infected 7-day-old chick embryo yolk sacs. Pooled infected yolk sacs are blended and treated with formalin at a final concentration of 0.2 percent (v/v) to inactivate the Chlamydia. The suspension is extracted with ether for 72 hours or until a clear separation occurs between the aqueous and organic phases. The aqueous phase is removed and diluted to a final concentration of 1 percent tissue (w/v) with normal saline containing 0.1 percent formalin and 0.3 percent phenol. Uninfected yolk sacs, harvested from *Salmonella pullorum*-

free and Rous inhibitory factor-free eggs, are extracted in a similar fashion and the preparation used as control material. Sterility and safety tests are performed on each lot of test and control material. Testing of both materials includes analytical assays for nitrogen, phenol, formalin, total solids, sodium chloride, and pH. A standard acceptable range of values is established for each determination.

All chlamydia share a common or group specific antigen which is protoplasmic, heat stable, ether soluble, trypsin resistant, and glycolipid in nature. Type specific antigen, probably a protein, is found in the cell wall. At least nine different antigenic types have been established for lymphogranuloma venereum, trachoma, inclusion conjunctivitis, and other group A organisms. Delayed type skin hypersensitivity develops in a patient 12 to 40 days after the primary lesion. Complement fixing antibodies appear at about the same time but may precede skin reactivity to the intradermal antigen. Cross reactions occur in both intradermal skin testing and in complement fixation serologic tests among patients infected with lymphogranuloma venereum and those infected with other agents belonging to the *C. trachomatis* group. The complement fixation test is generally believed to be more sensitive than the intracutaneous Frei test as a diagnostic tool (Refs. 4, 5 and 6).

Canizares reported in 1954 that repeated skin tests did not sensitize, and a test once positive remained positive for life (Ref. 7). However, the sensitivity of the skin test for detection of infected patients is difficult to determine from the literature. Older articles and books leave the impression that the Frei test is highly specific (Ref. 8 and 9) but it has been known for some time that infection with any of the Chlamydia will sensitize to the Frei antigen. Abrams in 1968 reported that 19 out of 20 patients with LGV at Letterman Army Hospital had a positive Frei test (Ref. 10). A year later, Schachter studied 12 patients mostly from the same hospital and found that only 4 out of 11 (36 percent) showed a positive Frei test while 10 out of 12 (83 percent) were positive by serologic tests (Ref. 4). Schachter also reported that the complement fixing titer was not boosted by the skin tests.

A general critique of the Frei test includes the following points: (1) It does not uniformly yield a positive reaction in all patients with clinical lymphogranuloma venereum, or in as high a percentage of patients as those with serologic evidence of having had exposure to this agent; (2) nonspecific reactions necessitate the use of control materials; (3) exposure to other agents in the Chlamydial group results in positive reactions; (4) standardization of the potency of the skin tests must be done in reactive human beings (At present there is no satisfactory experimental animal or in vitro system); (5) since the skin test antigen is made from living material, i.e. embryonated hens eggs, it is not possible at

this time to be certain what agents, or other biologically important contaminants are present in the current antigen.

#### LYMPHOGRANULOMA VENEREUM ANTIGEN BY LEDERLE

1. **Product.** Lymphogranuloma Venereum Antigen manufactured by Lederle Laboratories.
2. **Description.** At present, lymphogranuloma venereum (LGV) antigen is made only by Lederle Laboratories and is described in the generic review.
3. **Analysis—(a) Effectiveness.** The Lederle LGV Antigen does not identify all individuals who have had immunological experience with this agent. Data submitted by the manufacturer on 10 tests in 8 patients with lots 136A and 137A indicate a sensitivity of 80 percent and a specificity of 60 percent respectively. However, failure to identify people with immunologic experience has been reported to have occurred in 7 out of 10 people (Ref. 1). Extensive cross reactivity is seen in patients with other Chlamydial infections (Ref. 3 and 4).

#### CHARACTERISTICS OF EFFECTIVENESS

- (i) **Test material—(1) Chemical composition.** Chemical composition is defined by nitrogen content, total solids, sodium chloride, pH, and amounts of formalin and phenol (Ref. 5).
- (2) **Reproducibility.** Concerning lot-to-lot reproducibility, the following com-

parisons were made on the number of subjects indicated, according to data submitted by the manufacturer:

Current lot	Number of subjects	Mean mm of induration		Difference
		Current	Prior	
130A.....	5	10.8	7.8	+3.0
131A.....	5	7.0	0	-----
132A.....	3	3.7	8.3	-4.6
133A.....	4	8.4	7.0	+1.4
134A.....	3	2.7	2.7	0
135A.....	6	4.3	5.2	-.9
136A.....	6	5.2	2.5	+1.7
137A.....	2	9.9	2.5	+2.0

1 Not done.

With the small number of subjects poorly documented as to disease and without information that the tests were read blindly, one can only conclude that the lots are not completely dissimilar.

(3) **Standardization.** There is no standardization in a laboratory system and no reference standard.

(4) **Stability.** There are no data on stability.

(5) **Sensitization.** Information in the literature suggests that the skin test does not induce complement fixing antibodies (Refs. 1 and 6).

(6) **Elimination by host.** No data are available on elimination of the antigen by the host.

(7) **Diluent.** There are no reports of sensitization due to phenol. Formulin, which is used in the production of the extract, has produced definite sensitization, although none from this preparation has been reported (Ref. 7).

(i) **Test method.** (1) Application is simple and accurate, as in other "Mantoux" type intracutaneous tests.

(2) Test reaction is round and presents little problem in reading.

(3) There is a sufficient range of reaction size for quantitative dose response studies according to meager data and product information.

(4) The time of appearance of the reaction makes interpretation of one reading at a single time difficult, because some reactions may not appear for 4 or 5 days (Ref. 8), and in the earlier literature it was suggested that the patient be observed for 1 week. Insufficient numbers of known positive controls have been tested with this antigen and the test read at different time intervals from 24 hours to 1 week to determine the true time course of the reaction appearance.

(b) **Safety—(1) Host response.** No adverse reactions have been reported to the manufacturer in the last 5 years. The Panel found no information concerning potential carcinogenic, teratogenic, or mutagenic effects from this product.

(ii) **Test material—(1) Routine sterility tests** are done to rule out bacterial contamination and residual viability of the Chlamydial agent. There was no information about other possible animal agents (chicken viruses) or agents which might be present in this biologic material. Rif and S. pullorum free eggs are used in the manufacturing of this product.

(2) No examinations are done for mycoplasma. No information was available to indicate whether there are microbial or nonmicrobial contaminating antigens, but by inference there are antigens derived from chicken yolk sacs present in this preparation.

(3) No information was available on the rate and method of elimination.

(4) The standard toxicity tests are performed.

(iii) **Test method.** The test produces very little pain or bleeding, and is essentially noninjurious.

4. **Recommendations.** The Panel recommends that the product should be placed in Category II as being unsafe and ineffective. The product is crude, contains a wide variety of yolk sac antigens and probably avian viruses, and does not adequately identify persons with immunologic experience with *C. trachomatis*. The following specific points apply to this product:

(a) There is poor specificity and sensitivity. There is a potentially severe penalty for lack of sensitivity in clinical applications.

(b) There is no adequate information on reproducibility.

(c) No quantitative dose/response relationship has been established.

(d) There are no data concerning the stability of the product.

(e) There is no reference material against which new lots can be standardized.

(f) There is a more sensitive serologic test.

#### MUMPS SKIN TEST ANTIGEN

##### GENERIC STATEMENT

The currently available skin test antigen for the detection of mumps virus hypersensitivity is a suspension of the formalin killed agent processed from

the extraembryonic fluid of virus infected chick embryos. The product is marketed for use as a skin test reagent to detect delayed type hypersensitivity following an infection by the mumps virus.

Although marketed primarily to identify susceptible populations who should be protected against the disease, i.e., those in whom complications might develop (Ref. 1), it is generally employed by internists and pediatricians as one of a number of tests used to evaluate immunological (T-cell) competence in individuals with possible cell-mediated immune deficiency diseases (Ref. 2). Indeed, this latter application would appear to be one of the main current uses of the product.

Through experimental studies with monkeys, reported in 1934 by Johnson and Goodpasture, the etiologic agent of parotitis epidemica (mumps) was definitively shown to be a filterable agent (Ref. 3). It remained until later, however, for Enders and his colleagues to characterize the immune response to infection with mumps virus (Ref. 4 and 5). These early immunological studies were all performed with antigens prepared from infected monkey parotid glands (Ref. 5). Early attempts to cultivate the mumps virus in embryonated eggs were inconclusive (Refs. 6 and 7).

In 1945 Habel (Ref. 8) reported cultivation of mumps virus in the developing chick embryo and demonstrated the applicability of this source of virus to complement fixation, virus neutralization and skin tests. More recently, the virus has been cultivated in tissue culture cells (Ref. 9), but this source of virus is not employed as the skin test reagent.

Heat inactivated mumps virus obtained from infected parotid glands of monkeys served as the first antigen for demonstration of skin test hypersensitivity (Ref. 5). This source of virus was soon supplanted by mumps virus propagated in embryonated chicken's egg (Ref. 8). Mumps skin test antigen is routinely available as a partially purified preparation derived from the allantoic cavity of infected chick embryos. Presently, the commercial material is an inactivated virus to which a preservative is added (Ref. 1).

Mumps virus is classified with the paramyxoviruses which form a relatively homogeneous family based on their chemical, physical and several biological properties (Ref. 10). Included with the mumps virus in this group are parainfluenza, measles, respiratory syncytial and Newcastle disease virus.

The mumps virion is characterized as a tightly coiled ribonucleic acid (RNA) nucleocapsid with helical symmetry, encased in lipoprotein envelope; glycoprotein spikes are situated on the outer surface of the envelope (Ref. 11). The virus envelope is derived from altered host cell membranes during release from the cell surface (Ref. 12). The diameters of the mumps virus particles vary between 85 and 600 nanometers with a mean of about 140 nanometers (Ref. 11).

The mumps virus possesses two major antigenic components (S-antigen and V-antigen). Antibodies produced against these antigens do not appear simultaneously (Ref. 13). The internal RNA-protein nucleocapsid represents the S-antigen and is serologically distinct from the V-antigen found in the envelope of the mumps virion (Ref. 13). It is the V-antigen which induces the formation of protective antibody (Ref. 14). In addition to a hemagglutinin, capable of agglutinating erythrocytes of many species (Ref. 15), and a weakly active neuraminidase, the mumps virus also possesses a hemolysin. While the same receptor sites on the erythrocyte appear to participate in both hemagglutination and hemolysis, the hemolysin is distinct from the hemagglutinin (Ref. 16).

The mumps virus is antigenically related to other paramyxoviruses, particularly parainfluenza type I and Newcastle disease virus (Refs. 17 and 18). Significant antigenic relationships are observed by a heterotypic antibody rise to parainfluenza virus in sera from patients with mumps (Ref. 17). Antigenic variation between strains of mumps virus has not been demonstrated (Ref. 11).

Differential centrifugation is currently the only procedure employed in the purification of mumps skin test antigen prepared from virus infected chick allantoic fluid (Ref. 1). Purification of the mumps virus by differential sedimentation may result in: (a) Large losses of virus (Ref. 19), (b) destruction of the virion (Ref. 20), or (c) co-sedimentation of normal chick embryonic particles which contaminate the final product (Ref. 21).

Employing mumps skin test antigen prepared from virus infected parotid glands of monkeys, Enders and his colleague (Ref. 5) first demonstrated a strong correlation between cutaneous reactivity and past experience with the virus. With the successful propagation of mumps virus in embryonated chicken's eggs, Habel (Ref. 8) compared the effectiveness of this source of antigen to that produced in monkeys. The relative ease of production of virus antigen by the infected chick embryo and the correlation of skin test reactivity of the in ovo derived virus to past host experience with the agent were the most important factors that resulted in the chick embryo supplanting the monkey parotid gland as the source of mumps skin test antigen (Ref. 22).

Several observations have raised serious questions concerning the specificity of the virus antigen derived from eggs. Habel (Ref. 8), in his comparative study, reported that 9 of 26 individuals who had received at least 1 inoculation of typhus fever vaccine derived from eggs gave a positive reaction to control material processed from uninfected eggs. Concern about the significant percentage of cutaneous reactivity to the avian control material alone has been voiced by several investigators (Refs. 23 through 26). In studies where avian control material has been employed, positive cutaneous reactivity to mumps skin test anti-

gen was defined as a differential reaction between the viral material and the control of 10 mm or more (Refs. 23 through 27). When positive reactivity occurs to both virus antigen and control material, the investigator may arbitrarily eliminate or include the experimental subject as a positive reactor depending on the experimental criteria employed in the study (Refs. 24 and 25). These findings are extremely important in light of the report of St. Geme and his colleagues (Ref. 28) who observed that inoculation of inactivated mumps vaccine with two adult doses at monthly intervals into four infants under 1 year of age failed to evoke cutaneous reactivity or neutralizing antibody. Two of these infants, however, developed skin test hypersensitivity to the avian control material. These studies further emphasize that, while the currently available skin test material is simply a dilution of the mumps virus vaccine (Ref. 25), there is insufficient antigenic mass in the skin test material to induce a primary immunological response but that a secondary (anamnestic) response may occur (Ref. 28). At the present time the avian control material is commercially unavailable for routine clinical usage (Refs. 24 and 26).

Concern has also been raised regarding the sensitivity of the mumps skin test material derived from eggs. Employing a minimum reading of 15 mm erythema to indicate positive cutaneous reactivity to the mumps skin test antigen, Tucker and Overman (Ref. 29) documented a 25 percent false negative rate. Vicens et al. (Ref. 27) judged the skin test as only equivocally useful noting that, in their study of 133 adults, the skin test correlated only with high titers of neutralizing antibody. Over 30 percent false negative skin tests were documented by Burnell and his co-workers (Ref. 30) by a comparison of virus isolation with neutralizing antibodies and skin test reactivity in 15 children exposed to clinical mumps. These studies were confirmed by Brickman and Brunell (Ref. 24) in 59 students, demonstrating both poor correlation between skin tests and neutralizing antibodies and significant difference between two lots of skin test antigen used in the study. They experienced a 45 percent false negative rate with one of the lots compared to a 30 percent rate in the other. St. Geme (Ref. 31) confirmed and expanded on this latter finding by titrating several lots of commercial mumps skin test antigen employing hemagglutinin assay and skin test reactivity. These latter investigators demonstrated considerable variation between lots and concluded that the antigen currently available "will not allow the clinician to select with certainty the susceptible young adult who might profit from live attenuated mumps virus immunization." (Ref. 32).

#### MUMPS SKIN TEST ANTIGEN BY ELI LILLY

1. **Product.** Mumps Skin Test Antigen, manufactured by Eli Lilly and Company.
2. **Description.** The mumps skin test antigen is used to evaluate immunity to mumps virus infection (Ref. 1). The mumps skin test antigen produced by Eli Lilly and Company is an eight-fold dilution, in physiological saline, of formalin inactivated vaccine (Ref. 1). For the production of mumps vaccine the virus is harvested from the extra-embryonic fluids of infected 7-day-old chick embryos, concentrated and purified by differential sedimentation, resuspended in 0.05 M glycine buffer, inactivated with formalin (1:1000), diluted with isotonic sodium chloride, and preserved with thimerosal (1:5000 ethylmercurithiosalicylate). The final mumps

skin test antigen, suspended in physiological saline, contains approximately 0.006 M glycine, 1:10,000 thimerosal and less than 1:16,000 formalin.

3. **Analysis—(a) Effectiveness.** The ability of the mumps skin test antigen to measure the presence or absence of immunologic experience with the virus has been evaluated by the extent to which the skin test reaction correlates (i) with a history of clinical disease, (ii) with individual susceptibility as measured by subsequent infection, or (iii) with various serological indices of mumps infection. Since the original demonstration by Enders and his colleagues (Ref. 3) of the strong correlation between cutaneous reactivity to mumps skin test antigen and past host experience with the virus, several serious questions have been raised concerning the sensitivity of the commercially available skin test antigen which is derived in ovo (Ref. 4 through 13).

Enders et al. (Ref. 3), in their original studies using antigen derived from infected monkey parotid glands, correlated complement fixation titers with detailed data on the size of reactions obtained on individuals studied, and recommended that 15 mm erythema be regarded as the minimum positive reaction. They (Ref. 14) subsequently modified their criteria and concluded, from a practical point of view, that an erythematous reaction of at least 10 mm or larger be regarded as positive. Habel (Ref. 15) in his skin test study comparing mumps skin test antigen derived from chick embryo to that derived from monkey parotid glands, stated that a majority of positive cutaneous reactions (erythema) in individuals with a history of mumps was 10 mm to 20 mm in diameter. Florman and his co-workers (Ref. 16) designated 10 mm as the minimum positive reaction, whereas Tucker and Overman (Ref. 17) suggested that the 15 mm reaction be adopted to designate positive reactions. In a study with a pediatric population, Horowitz et al. (Ref. 7) employed 10 mm reaction size to designate a positive response. Brunell and his co-workers (Ref. 6) based their study on a double standard accepting a 10 mm response in children and a 15 mm reaction in adults as positive cutaneous reactivity stating that children tend to have smaller reactions to mumps skin test antigen than adults.

The available data indicate that the sensitivity of the mumps skin test antigen produced from embryonated hen's eggs by Eli Lilly and Company is variable. Vicens and his co-workers (Ref. 5) observed a 10 percent incidence of false negative skin test results in subjects who gave a positive history of mumps and they judged this test to be equivocal. Bart et al. (Ref. 12) reported that of 55 people with a positive mumps history and a positive hemagglutination inhibition serology, the mumps skin test was positive in 51 individuals.

A major criticism of most studies evaluating the specificity of the Eli Lilly and Company mumps skin test antigen has been the failure of the investigators to employ a control material prepared

from uninfected extraembryonic fluids of chick embryo (Refs. 4 and 6). Eli Lilly and Company are well aware of this and state that "Pseudopositive reactions may develop in persons sensitive to egg protein" (Ref. 1), but they also state that "A control test is not necessary" (Ref. 1). Two unavoidable features of the mumps skin test antigen contribute to this property of the reagent: (a) During the maturation process of the mumps virion the lipoprotein envelope, which encases the RNA-nucleocapsid of the virus, is derived directly from the membranes of the developing chick cell (Ref. 19), and (b) in the purification procedure of the mumps virus by differential centrifugation, normal chick embryonic particles cosediment with the virus and are not removed from the final product (Ref. 20). This is further documented by data (Refs. 5, 7 through 13) indicating that the specificity of the Eli Lilly and Company mumps skin test antigen is comprised by contaminating antigens from the developing chick embryo.

There is evidence to suggest that the mumps skin test antigen may detect past host experience to other antigenically related paramyxoviruses, particularly parainfluenza type I and Newcastle disease virus (Refs. 21 and 22) Fulginiti et al. (Ref. 23) support this observation, but experimental studies with monkeys failed to demonstrate an antigenic relationship between mumps virus and parainfluenza type I (Ref. 13). However, there are studies indicating that truly negative individuals are classified as positive by the skin test. Meyer et al. (Ref. 4) reported that 2 of 69 skin test positive adults subsequently developed mumps. Brunell et al. (Ref. 6) reported that 9 of 18 children who were reactive to the mumps skin test antigen subsequently developed clinical mumps.

#### CHARACTERISTICS OF EFFECTIVENESS

- (1) **Test material—(1) Chemical composition.** No data are given but the major components are probably the same as those identified in the Generic Review.
- (2) **Reproducibility from lot-to-lot.** Two reports deal directly with this question (Refs. 8 and 18) and the data indicate that there is wide variation in potency of different lots of mumps skin test antigen produced by Eli Lilly and Company as measured by complement-fixation antigen titration (Ref. 18) and by skin tests in humans who have neutralizing antibody (Ref. 8).

(3) **Standardization.** A direct complement-fixation test is performed on the bulk and final product employing antisera specific for mumps. The Bureau of Biologics does not have an official requirement for the Mumps virus skin test antigen, but Eli Lilly and Company has designated a minimum titer of 20 complement-fixing units per ml for each satisfactory lot with approval of the Bureau of Biologics. While Eli Lilly and Company does not state the source of their mumps specific antibody, they do require that the final product meet a minimum complement fixing standard. There is no evidence presented that indicates that the complement fixing antigen titer

correlates with cutaneous reactivity to the antigen.

There is no reference standard.

No experimental animal test model is employed that correlates to systems in humans.

(4) *Stability*. No valid data are available on this product.

(5) *Immunogenicity*. (a) The available data indicate that the mumps skin test antigen does not induce cutaneous reactivity in the skin-test-negative individual (Refs. 2 and 9). St. Geme and his co-workers (Ref. 9) demonstrated that repeated injections of the inactivated mumps vaccine, from which the mumps skin test antigen is derived, has induced cutaneous hypersensitivity of the avian antigens and egg products which contaminate the vaccine.

(b) *Studies in both humans and monkeys* convincingly show that the Eli Lilly and Company mumps skin test antigen contains material which may augment immunologic responses in skin test positive subjects. These augmentations in humoral antibodies may be detected as a rise in neutralizing or hemagglutination inhibition antibody titers (Refs. 6, 9 through 13 and 18).

(6) *Elimination by host*. There are no data presented regarding elimination of the mumps skin test antigen from the host.

(7) *Diluent*. The diluent contains 1:10,000 thimerosal. Eli Lilly and Company are aware of the potential sensitizing reactions that may occur to this preservative and proper instructions are given in the package insert (Ref. 1). See the Panel statement on "Thimerosal as a Preservative."

(ii) *Test method*—(1) *Application of test*. The test requires an intracutaneous injection of 0.1 ml of antigen. The procedure is simple and accurate.

(2) *Measurement of test*. (a) A review of the available literature in which the specific Eli Lilly and Company antigen was employed (Refs. 6, 7, 8, 10, 13, and 18) leads to the impression that the reaction is not round. Each of the investigators report that the largest diameter was measured and recorded.

(b) No information is given on the definition of the border of the reaction. The investigator is instructed to measure the diameter of erythema, which may be diffuse in some test subjects.

(3) *Quantitative dose response*. No data referring to possible quantitative dose response studies are available for this antigen.

(4) *Duration of reaction*. Eli Lilly and Company recommends that the test be read between 24 and 36 hours (Ref. 1). A review of the literature in which the Eli Lilly and Company mumps skin test antigen was employed reveals that the reaction can be read as early as 24 hours (Refs. 4, 6, 7, 8, 10, 13, and 18) or as late as 72 hours (Ref. 12).

(b) *Safety*—(1) *Host response*. With the exception of a reaction to thimerosal and/or to the avian antigens or egg products, there are no reports to indicate that the Eli Lilly and Company mumps

skin test antigen causes anaphylaxis; severe skin reaction; constitutional symptoms; carcinogenic; teratogenic or mutagenic effects; sensitization to product; pain; skin irritation; scarring; change in pigmentation; reactivation of disease; or interference with the action of other medications.

(ii) *Test material*—(1) *Sterility*. (Freedom from live microbial agents). The bulk and final product are tested for the presence of bacteria and fungi. Specific tests for viruses and mycoplasma are not performed.

(2) *Purity*. (Free of other contaminants). No tests for purity are performed.

(3) *Elimination by host*. No data were available.

(4) *Nontoxic*. (a) Human studies suggest that the material is nontoxic (Refs. 2, 4 through 13 and 18).

(b) Animal tests required by the Bureau of Biologics are performed.

(iii) *Test method*. The test produces very little pain or bleeding and is essentially noninjurious.

4. *Recommendations*. (a) By strict standards, this product should be placed in Category II as being ineffective for its labeled indication of identifying immunity to mumps virus infection because:

(i) There is poor specificity and sensitivity.

(ii) There is wide variation of potency from lot-to-lot as measured by complement fixation and neutralizing antibodies.

(iii) There is no uniformity in the interpretation of the test.

(iv) No quantitative dose response relationship has been established.

(v) The material is clearly immunogenic.

(vi) There are no data concerning the stability of the product.

(vii) There is no reference material against which new lots can be standardized.

(b) However, because of its current widespread use for the nonlabeled purpose of ascertaining the immunocompetence of a patient, the Panel recommends the product be placed in Category IIIB, license to be suspended until acceptable data, based on scientifically sound methods, are submitted to demonstrate the product's safety and effectiveness in humans for an amended use. These data should include:

(i) Distribution of reaction sizes in persons known to have immune deficiencies and those presumed to be immunocompetent.

(ii) Correlation of these reactions with other in vivo and in vitro tests for immunocompetence.

(iii) Dose/response relationships should be provided and compared to a reference standard.

(iv) Evidence that the product is stable until the expiration date.

(v) Other data to indicate that the product complies with any additional requirements by the FDA for skin tests used to detect immunocompetence.

DIPHTHERIA TOXIN FOR SCHICK TEST AND SCHICK TEST CONTROL

## GENERIC STATEMENT

The Schick test reagent used to determine susceptibility to diphtheria is diphtheria toxin diluted in buffer containing a preservative (thimerosal) and a non-allergenic stabilizing agent. The potency of the Schick test dose (STD) is defined as "that amount of the standard which, when mixed with 0.001 unit of the U.S. Standard Diphtheria Antitoxin and injected intradermally in a guinea pig, will induce an erythematous reaction of 10 mm in diameter" (Ref. 1).

The test dose is introduced intracutaneously and is read at 36-72 hours. A negative test indicates that neutralization of the toxin has occurred and that diphtheria is not likely to occur in that individual on average exposure to the etiologic agent, *Corynebacterium diphtheriae*. Interpretation of a positive test is more complex in that it may indicate (a) no protective immunity or (b) hypersensitivity to the bacterial protein and/or the preservative. To distinguish between these two possibilities, a control test consisting of inactivated toxin is often used in conjunction with the diphtheria toxin for the Schick test. The Schick test control may consist of toxin heated to 65° C for 15 minutes to inactivate the toxic component or toxin inactivated by formalin.

## PRODUCT REVIEW

While Klebs first discovered and described the diphtheria bacillus in 1883 (Ref. 2), it was Loeffler (Ref. 3) who reported in 1884 that in fatal cases of diphtheria, necropsy invariably revealed sterile, hemorrhagic and necrotic lesions in many organs of the body and that the causative agent, *C. diphtheriae*, could only be found in superficial membranous lesions usually localized in the throat. Four years later, Roux and Yersin (Ref. 4) reproduced these lesions in experimental animals with a potent, cell-free, heat labile toxin produced extracellu-

larly by these organisms in the culture medium. Von Behring (Ref. 5) subsequently demonstrated that serum obtained from animals immunized against the toxin could be used in the prevention and treatment of the disease thus establishing the basis for understanding the mechanism of protective immunity to diphtheria. It remained until 1913, however, for Schick (Ref. 6) to introduce the skin test for identifying susceptibility to the toxin of *C. diphtheriae*.

The original Schick test dose (STD) was defined so that 0.1 ml was equivalent to 0.02 (1/50) minimum lethal dose (MLD) for guinea pigs. Variation in the susceptibility of the guinea pigs to the lethal activity of diphtheria toxin made it difficult to standardize the STD and for this reason the requirements for standardization of the STD were revised in the United States in 1969 (Ref. 7). The U.S. Standard Diphtheria Toxin for Schick Test is distributed by the Bureau of Biologics. It is used to determine the potency of various lots of Diphtheria Toxin for use in the Schick Test. This toxin potency is expressed in terms of the STD activity of the standard. The STD of the standard toxin is that amount which when combined with 0.001 unit of the U.S. Standard Diphtheria Antitoxin induces an erythematous reaction of 10 mm in diameter in the guinea pig. The STD of the U.S. Standard is equivalent to 1.3 International Units of the International Standard Schick Test Toxin. The U.S. Standard Diphtheria Antitoxin is also available from the Bureau of Biologics as a lyophilized preparation which has been stored at 4° C and is reconstituted to contain 6 units/ml of activity.

(a) *Attributes*. Diphtheria toxin is a protein of approximately 62,000 daltons (Ref. 8) produced only by strains of *C. diphtheriae* lysogenic for Beta-prophage carrying the *tox* gene (Ref. 9). Phage multiplication is not a necessary prerequisite for toxin production since the *tox* gene is expressed independently of the other phage genes (Ref. 10). The simple introduction of the phage genome carrying the structural gene for toxin production into sensitive strains of *C. diphtheriae* does not result in appreciable yields of toxin until the content of inorganic iron in the medium has been depleted and the concentration of iron in the bacteria has decreased to a critical level (Ref. 11). There is evidence to suggest that the repressor molecule which regulates the expression of the *tox* gene is an iron containing protein (Ref. 12). However, the mechanism by which iron mediates the effect of toxin production is not known.

The toxin molecule is released into the culture medium as a single polypeptide chain (Ref. 13), which possesses two nonoverlapping disulfide bonds (Ref. 14). It has been purified in crystalline form from culture filtrates (Ref. 15). Mild proteolytic attack with trypsin yields a molecule ("nicked protein") with two peptide fractions, A and B, still connected by the disulfide bridges (Ref. 14). Subsequent reduction and alkylation

yields fragment A, the amino terminal peptide of 24,000 daltons, and fragment B, the carboxyl terminal peptide of 38,000 daltons (Ref. 13). These peptides are most effectively separated by electrophoresis or gel filtration in denaturing solvents such as 6M urea or 0.1 percent sodium dodecyl sulfate. Such treatments, however, yield B fragments which spontaneously aggregate and as a result of instability it has been difficult to biologically characterize this moiety. Fragment A on the other hand, withstands such treatment and is relatively resistant to heating and extremes of pH (Ref. 16).

Diphtheria toxin at concentration of 10<sup>-6</sup> M or less was shown by Strauss and Hendee (Ref. 17) to completely block incorporation of amino acids into tissue culture cells while other metabolic activities remained normal. Collier and Pappenheimer (Ref. 18) subsequently showed that toxin, in the presence of nicotinamide adenine dinucleotide (NAD), prevented polypeptide elongation. Elongation factor (EF-2), an important component of protein synthesis, is required for translocation of polypeptidyl-transfer ribonucleic acid (RNA) from the acceptor site to the donor site on eukaryotic ribosomes (Ref. 19). EF-2 is inactivated by fragment A or diphtheria toxin in the presence of NAD (Ref. 20). The reaction involves the transfer of adenosine diphosphate ribose (ADPRibosyl) from NAD<sup>+</sup> to EF-2 to yield ADPRibosyl-EF-2 which is inactive. The mechanism is specific for eukaryotic elongation factor and toxin has no effect on prokaryotic or mitochondrial elongation factor (EF-2) (Ref. 19). The enzymically active site occurs on fragment A but appears to be masked since the intact toxin molecule is inactive (Ref. 21).

The function of fragment B is not well characterized. It does not appear to have any enzymic activity.

Studies with various Beta-phages modified in their *tox* gene have contributed greatly to the understanding of diphtheria toxin. These mutant phages, when expressed by their host, result in the production of proteins that are not toxic or have reduced toxicity but are reactive with diphtheria antitoxin (Ref. 22). Such proteins are termed cross reactive materials (CRM). Mild proteolytic treatment with trypsin and subsequent reduction and alkylation of various purified CRMs yields fragments which may be altered in their A or B fragment (Ref. 23). Mixing and oxidizing studies using fragments obtained from nontoxic proteins have yielded fully toxic hybrid molecules (Ref. 23). The studies of Pappenheimer and his colleagues (Refs. 24 and 25) suggest that the function of fragment B is concerned with binding to specific sites on cell membranes and facilitating the entry of fragment A into sensitive cells.

(b) *Present status*. Diphtheria, until about 1885, was endemic throughout the world with epidemics and a pandemic having been recorded (Ref. 26). Between 1885 and 1941 a general decreasing trend occurred in the mortality of diphtheria with antitoxin therapy and immuniza-

tion practices contributing to this decline (Ref. 27). In the early 1940's there was a significant increase in the prevalence of diphtheria. The focus appears to have begun in Germany due in part to the internment of massive numbers of unimmunized children into concentration camps from which focus the disease spread to other parts of Europe (Ref. 28).

The incidence of diphtheria since the post World War II era has diminished to a point where the disease is considered rare (Ref. 29). This is particularly true in the age group under 10 years, owing in part to successful immunization practices. There does, however, appear to be slight increase in the incidence of diphtheria in the older age groups (Ref. 30). While the overall incidence of disease is low, it is still an important problem in areas where immunization practices are not carried out (Ref. 31).

While highly purified diphtheria toxin has been prepared in crystalline form (Ref. 15), the currently available diphtheria toxin for the Schick test is either diluted culture filtrates or one prepared by ammonium sulphate precipitation. Both methods of preparation yield reagents which contain, in addition to toxins, other growth products of the organism which may produce reactions in some individuals (Ref. 32). For this reason a Schick Test Control is often used clinically in order to interpret skin test responses. Schick Test Control material has been prepared by heat treatment to inactivate the toxic component and by formalin inactivation of toxin. The latter material is used to determine a patient's tolerance to toxoid as well as to measure his immune status.

The diluent for Diphtheria Toxin for Schick Test and the Schick Test Control contains normal human serum albumin or gelatin as a stabilizer (Ref. 33) thereby preventing rapid deterioration of the toxin. The use of human serum albumin as stabilizer has made it possible to distribute diphtheria toxin for the Schick Test in its diluted form ready for use.

While immunization with formalin inactivated and alum precipitated toxoid induces protective immunity to diphtheria and has significantly reduced the mortality rate of diphtheria, there is still a need for the Schick diphtheria skin test antigen. The test can be useful in assessing the need for immunization of an individual during sporadic epidemics. It may also have a place in testing patients with suspected immune deficiencies.

#### DIPHThERIA TOXIN FOR SCHICK TEST BY MASSACHUSETTS PUBLIC HEALTH BIOLOGICAL LABORATORIES

1. *Product*. Diphtheria Toxin for Schick Test manufactured by Massachusetts Public Health Biological Laboratories (MPHBL).

2. *Description*. Schick toxin as dispensed consists of 50 Schick test doses of purified diphtheria toxin in 5 ml of sterile buffered salt solution. The toxin diluent contains 1:30,000 thimerosal as a preservative and 0.4 percent normal human serum albumin as a stabilizer. Toxin is injected intracutaneously in 0.1 ml volume and a toxoid control is injected on the opposite forearm. The reaction, if positive, appears initially at 24 to 36 hours, reaching greatest intensity by the 4th or 5th day with fading thereafter. A positive test signifies that the individual possesses little or no anti-toxin in his blood and is probably susceptible to diphtheria (Ref. 1).

3. *Analysis*—(a) *Effectiveness*—(1) *Sensitivity*.—In the diphtheria Schick test a negative response indicates immunity and a positive test susceptibility. In the efficacy data provided, a letter from a physician who evidently tested a large number of individuals, stated "on only a few occasions were positive tests found where there had been some doubt about the immunization record of the child tested" (Ref. 1). In another study by Pappenheimer, Edsall and co-workers in 1950 (Ref. 2), using the MPHBL product (Lot No. AS 51) over 2,700 soldiers were tested, 40 percent of whom were Schick positive. The manufacturer stated that based on results of this study "the test correctly defines the immune, the

nonimmune, and the hypersensitive" (Ref. 1). No specific data are provided even in the reference which they cite regarding hypersensitive responders (Ref. 2). Overall there appear to be no specific data provided in the MPHBL brochure which allow correlation of the history of previous diphtheria immunization with either a positive or negative Schick test response.

(ii) *Specificity*. Nothing is stated in the MPHBL's brochure with regard to possible cross-reactivity between their diphtheria toxin and other bacterial toxins. In animal systems the manufacturer states that "specificity is guaranteed by the fact that the minimum reaction doses of different dilutions of the parent toxin are proportional to the minimum lethal doses where lethality of the guinea pig [sic] is confirmed as diphtheritic by autopsy" (Ref. 1). An identity test is also performed on filled Schick toxin containers. In this test a mixture of product and a solution of standard antitoxin are injected intracutaneously into the guinea pig and a control containing product and saline are similarly injected; after 40 to 66 hours reactions are measured and identity and specificity are confirmed if the control shows a 20 x 20 mm reaction and the antitoxin site is free of a significant reaction. Specific data obtained with these identity tests are not provided.

#### CHARACTERISTICS OF EFFECTIVENESS

(1) *Test material*—(1) *Defined chemical composition*. The chemical composition of MPHBL Schick test material is apparently unknown. The stock culture material is prepared from *Corynebacterium diphtheriae* Park-Williams No. 8 obtained from Connaught Laboratories. It is transplanted twice weekly to Wadsworth broth and incubated at room temperature. The production medium consists of Bacto™ casamino acids and yields toxin of 100-120 Lf (flocculation unit) per ml after 5 days incubation. This medium contains sodium chloride, cysteine, CaCl<sub>2</sub>, FeSO<sub>4</sub>, maltose and NaOH. Purification of diphtheria toxin is by the ammonium sulfate method in which proteins are salted out by adding 0.45 kg of ammonium sulfate/liter of crude culture filtrate. After a process of centrifugation and reprecipitation with ammonium sulfate, the precipitate is dissolved in distilled water, dialyzed, and sterilized by aseptic filtration and addition of 1:10,000 thimerosal.

(2) *Reproducibility*. No data on reproducibility of positive reactions in man were provided. The manufacturer stated that "0.01 Lf units of toxoid are sufficient to cause a pronounced and uniform antitoxin response in persons who already possess some measure of immunity." In studies by Edsall and Wyman, duplicate Schick tests with albumin and peptone Schick toxin on 215 individuals read at 4, 7, and some cases 5 days showed only certain "minor differences" (Ref. 3). Dilution of the same stock concentrate to produce different lots of Schick toxin remained quite constant over a 9-year period.

(3) *Standardization in laboratory systems*. Purity of the product is deter-

mined on toxin concentrates in terms of sLg per ml of nondialyzable nitrogen. The Ramon method is used for Lf and micro Kjeldahl method for nitrogen. The stock concentrate made in 1950 and still in use contains 1,300 Lf per mg of nitrogen. In preparation of the product, the manufacturer stated that "an aseptic addition is made of the same volume of a stock lot of concentrated purified toxin as was used in the last previous lot of the final product. The final toxicity is adjusted by additions of diluent or toxin as determined by preliminary intradermal testing in guinea pigs" (Ref. 1). Data from these lot comparisons are available for lots since 1968.

(4) *Stability*. The stock concentrates of MPHBL purified diphtheria toxin from which the current Schick materials are made were prepared in the year 1950 and contained 2,560 Lf and 67,000 MLD per ml. The manufacturer stated that its tests "indicate remarkable stability for this toxin concentrate, the loss in MLD being only 25 percent per decade." MPHBL diphtheria toxin contains 0.4 percent normal human serum albumin as a stabilizer. In studies by Edsall and Wyman in 1944, it was concluded that batches of Schick toxin stabilized with albumin showed no significant deterioration after exposure at 41° C for 24 hours (Ref. 3). The purified diphtheria toxin appears to be more stable than crude toxin and does not show the tendency toward spontaneous toxoid formation that crude preparations do, according to the studies by Pappenheimer (Ref. 4). The manufacturer holds a sample of the product at 37° C for not less than 24 hours and tests for potency. If the product passes this test it is "considered to be stable" (Ref. 1).

(5) *Sensitization*. Data were provided to show that a Schick test with its control can sensitize individuals or convert their skin test responses from positive to negative. The manufacturer believes an advantage of its product is that it uses concentrated (10 times) diphtheria toxoid as a control as opposed to unconcentrated, inactivated toxin, "because the Schick test is usually administered not only to determine the patient's immune status but also to determine his tolerance to toxoid" (Ref. 1). This amount has been shown to serve as a booster in individuals with low grade immunity but is said not to produce severe local or systemic reactions. These reactions are almost always seen in the Schick negative groups of patients who are given immunogenic doses (5 Lf) instead of skin testing doses (0.008 Lf) of toxoid.

(6) *Elimination by the host*. No data were available with regard to elimination of MPHBL diphtheria toxin by the host.

(7) *Diluent*. The diluent contains 1:30,000 thimerosal as a preservative and 0.4 percent normal human serum albumin as a stabilizer. The Panel comments regarding the sensitizing capacity of thimerosal apply to the diphtheria toxin product. (See the Panel's statement on "Thimerosal as a Preservative").

(ii) *Test method*—(1) *Application of test*. Application would appear to be simple and dosage reasonably accurate (0.1 ml volume intracutaneously, using a 27 gauge needle).

A positive test is characterized by a reaction to the Schick toxin beginning to appear in 24 to 36 hours, consisting of a circumscribed area of redness and slight induration which measures 1 cm or more in diameter. It develops gradually, reaches its greatest intensity on or about the 4th or 5th day, then fades, leaving a faint brownish pigmented spot which eventually disappears. There is no reaction at the site of the injection of the "Schick Control" (Ref. 1). A positive test signifies that the individual possesses little or no antitoxin in his blood and is probably susceptible to diphtheria.

In a positive-combined test, reactions appear at the sites of both injections, but the reaction at the site of the "Schick Toxin" injection is larger at the end of 4 days and persists longer than at the site of the "Schick Control" injection (Ref. 1). A positive-combined test indicates possible susceptibility to diphtheria and a sensitivity to the diphtheria bacillus proteins, suggesting caution in the administration of diphtheria toxoid.

The pseudo reaction is differentiated from the true positive test by the appearance of a reaction at the site of the "Schick Control" injection, and from a positive-combined test by the fact that reactions developing at the sites of both injections run a similar course, reach a maximum of intensity on the 3d day and then fade (Ref. 1). Individuals showing this reaction are hypersensitive to the diphtheria bacillus proteins and may have measurable amounts of antitoxin in their blood.

A negative reaction may be accompanied by a slight mark incident to the needle puncture, or a small area of reddening at either or both injection sites. If the test has been properly done, this negative reaction almost invariably indicates a titer of circulating serum antitoxin of at least 0.002 to .005 units per ml.

(2) *Measurement of test*. It is assumed that the test reaction is reasonably round and has clear-cut boundaries.

(3) *Quantitative dose response*. No human data were provided regarding quantitative dose response curves. In guinea pigs the manufacturer stated that intracutaneous doses larger than 0.1 ml cause severe lesions at the skin test site. Dose-response data in guinea pigs were provided for two dilutions of toxin and the test does appear to be in the appropriate range.

(4) *Duration of reaction*. The time course of a positive reaction has been stated under Paragraph 2, Description.

(b) *Safety*—(i) *Host response*. In a study by Kuhns and Pappenheimer the MPHBL product was used in a study of immediate type skin sensitivity to diphtheria toxoid (Ref. 5). There was a high degree of correlation between personal and family history of atopic allergy and between the occurrence of immediate wheal and flare reactions to the Schick

test material. Between 1969 and 1973 the manufacturer distributed nearly one hundred thousand skin test doses. They claim that "over a 10-year-period only one report of an untoward reaction to the product" has been reported (Ref. 1.) This occurred in a group of new employees of a state school. Reactions at the sites of injections ranged from 1.5 to 2.5 cm, and painful swollen arms were reported. The manufacturer did test this same lot of toxin in 24 guinea pigs and found reactions which differed in no way from those which were typical and regularly seen with other lots of Schick test material. In a letter to the complainant, the manufacturer suggested that the procedures employed in sterilization of the test equipment might have been at fault.

No additional data were provided on animal safety other than indicating that the general safety test is performed on two mice and two guinea pigs. The Panel found no information concerning potential carcinogenic, teratogenic, or mutagenic effects attributable to this product. The test would not appear to be painful and there is no scarring except for the previously mentioned brownish discoloration after the skin testing.

(ii) *Test material.*—(1) *Sterility.* There are no routine sterility tests for viral, mycoplasma or fungal contaminants but it is unlikely that these would be present. During the manufacturing process the material is sterilized by filtration using Seitz or millipore filters after addition of diluent. This is followed by final adjustment for toxicity through addition of diluent or toxin as determined by preliminary intracutaneous testing in guinea pigs. During lot production the contents of each flask are "smeared and cultured on plain agar" and smears are stained with gram stain and examined for contaminants. On the following day, any growth on agar slants is also stained and examined.

(2) *Other contaminants.* The material contains 0.4 percent normal human serum albumin, 1:30,000 thimerosal, and buffered salt. The manufacturer stated that "absence of allergens in the medium is assured by the avoidance of macromolecular substances in the medium" (Ref. 1). The main nutrient consists of complete acid hydrolysates of casein presumably in the Bacto casamino acid. In addition the manufacturer stated that the medium is determined to be free of blood group specific substances A and B, as determined by "a method recommended by the Public Health Service" (Ref. 1). It contains less than 0.004 mg Group A substance per ml and less than 0.08 mg Group B substances per ml.

(3) *Elimination by host.* No information was available with regard to elimination of MPHEL Diphtheria Toxin by the host.

(4) *Toxicity in man and animal systems.* Toxicity in man was discussed above. Routine safety tests in mice have been carried out for 20 lots since 1953. According to the manufacturer "there has never been any noteworthy effect on these animals from the 0.5 ml injection"

(Ref. 1). Guinea pigs are highly susceptible to the toxin. The administration of 5 ml results in death within 4 days due to "typical diphtherial intoxication."

Intracutaneous doses larger than 0.1 ml cause severe necrotic lesions at skin test sites and these effects are "intrinsic to the product" (Ref. 1).

(iii) *Test method.* The test produces very little pain or bleeding and is essentially noninjurious. The time course of this reaction (maximal reactivity at 4 to 5 days with gradual fading) is however longer than the usual fungal or mycobacterial delayed type skin test reaction. The brownish pigmentation observed is also not usually recorded with other delayed skin test reagents.

4. *Recommendations.* (a) The Panel recommends that this product should be placed in category IIIA because, although it is safe, there is insufficient evidence that it is effective for its labeled use of identifying susceptibility to diphtheria. The product should remain on the market while the manufacturer supplies additional data concerning the sensitivity of the test in persons with various titers of diphtheria antitoxin.

(b) Adequate stability data should be provided. (Data are required to support the statement by the manufacturer that a product stable for 24 hours at 37° C will be stable enough to ship.)

(c) Two years is a reasonable time for the recommended testing to be accomplished.

DIPHtheria TOXIN FOR SCHICK TEST AND SCHICK TEST CONTROL BY TEXAS STATE DEPARTMENT OF HEALTH

1. *Products.* Diphtheria Toxin for Schick Test and Schick Test Control manufactured by Texas State Department of Health.

2. *Description.* Texas State Department of Health (TSDH) Schick Test reagent is used to determine an individual's immunologic status in the control and prevention of diphtheria (Ref. 1). *Corynebacterium diphtheriae*, Park-Williams No. 8, isolated by the New York Bureau of Laboratories in 1894, is em-

ployed to produce TSDH Schick test diphtheria toxin. The organism was originally supplied by Connaught Laboratories (Toronto, Canada) to the Massachusetts State Department of Health who in turn provided it to TSDH. It is stored in ampules in the dried state.

The seed inoculum is initially grown in Wadsworth Proteose-Peptide broth. It is then inoculated into veal infusion broth in Povitsky bottles and incubated at 34° C for 1 week. This is followed by Seitz filtration and aging until the minimal lethal dose (MLD) has remained constant for two successive tests performed at 6-month intervals. This unpurified Schick test material is prepared for distribution in borate buffered saline solution containing 0.02 percent gelatin and 0.01 percent thimerosal. Its potency is equivalent to the U.S. standard. The potency must be such that the MLD is less than 0.0025 ml.

3. *Analysis.*—(a) *Effectiveness.* No data were provided by the manufacturer with regard to either sensitivity or specificity.

An identity test performed on filled Schick toxin containers is required by regulation. (In this test a mixture of product and a solution of standard antitoxin are injected intracutaneously into the guinea pig and the control containing product and saline are similarly injected; after 40 to 66 hours reactions are measured and identity and specificity are confirmed if the control shows a 20 x 20 mm reaction and the antitoxin site is free of a significant reaction.) This identity test is not mentioned as being performed by TSDH.

#### CHARACTERISTICS OF EFFECTIVENESS

(i) *Test material.*—(1) *Chemical composition.* The chemical composition of TSDH diphtheria Schick test material is apparently unknown (no data were submitted).

(2) *Reproducibility.* Regulations require each lot be standardized against the U.S. standard but no reproducibility data were submitted by TSDH.

(3) *Standardization.* No data were provided with regard to standardization of TSDH diphtheria toxin for Schick test in animal systems. The manufacturer does state that the material is tested "as per section 650.1" of Title 21, Code of Federal Regulations.

(4) *Stability.* The material contains 0.02 percent gelatin as a stabilizing agent. Regulations require that a sample of each lot be heated to 37° C for 24 hours and that its subsequent potency remain equal to that of the U.S. standard. No data are provided by the manufacturer about the stability of the product.

(5) *Sensitization.* No data were provided on the ability of repeated positive Schick tests with the TSDH product to sensitize individuals or to convert their skin test responses from positive to negative. The TSDH uses heated toxin as control material as opposed to the other producer who uses concentrated diphtheria toxoid as a control. The conditions of inactivation are not known. The man-

ufacturer states that some individuals are sensitive to diphtherial proteins other than the toxins.

(6) *Elimination by host.* No data were submitted by the manufacturer.

(7) *Diluent.* Thimerosal 1:10,000 is used as a preservative. Thimerosal has been shown to be sensitizing in some studies. The Panel's comments regarding the sensitizing capacity of thimerosal apply to this product. See the statement on "Thimerosal as a Preservative." No other data on the diluent were submitted by the manufacturer.

(ii) *Test method.*—(1) *Application of test.* The test is performed by the Mantoux intracutaneous method which is simple and reasonably accurate.

(2) *Measurement of test.* The TSDH package insert defines a positive reaction to the test as sharply defined redness 1 to 2 cm in diameter appearing in 24 to 40 hours. Nothing is said about the shape of the reaction (Ref. 1). The reaction develops gradually and reaches greatest intensity on about the 4th or 5th day followed by fading and frequent production of a faint brownish pigmented spot which eventually disappears. In this type of positive reaction there is no reactivity at the site of the Schick test control. In a so-called combined response, reactions appear at both injection sites but reactivity at the toxin site is larger at the end of 4 days. In a pseudo reaction, there is a response at the control site which runs a similar course to the response at the toxin site, both reaching a maximum intensity on day 3 followed by fading.

(3) *Quantitative dose response.* No data were provided with regard to quantitative dose response curves in man.

(4) *Duration of reaction.* The TSDH Schick test reaction appears at 24 to 60 hours reaching a maximum intensity on about the 4th day and at times persisting in modified form for several weeks (Ref. 1).

(b) *Safety.*—(1) *Host response.* The manufacturer provided no information on specific adverse effects attributable to the product. In the past 10 years over 100,000 doses have been distributed and no reports of serious reactions have been reported to the TSDH. There are several published references on clinical or epidemiologic studies of diphtheria in the state of Texas (Refs. 2 through 4) in which hundreds of cases were studied between 1967 and 1970. In none of these studies, however, is there any mention of use of TSDH Schick test. The Panel found no information concerning potential carcinogenic, teratogenic or mutagenic effects from this product.

(ii) *Test material.*—(1) *Sterility.* A sterility test is run on the parent material. The nature of this test was not stated but it is presumed that it consists of culturing each final lot as required by regulations.

(2) *Purity.* (other contaminants) The material contains 0.02 percent gelatin as a stabilizing agent. The seed inoculum is grown in Wadsworth Proteose-Peptide broth followed by inoculation into veal infusion broth, and it is possible that both components might sensitize.

(3) *Elimination by host.* No data were provided with regard to elimination of TSDH diphtheria toxin by the host.

(4) *Toxicity in man and animal systems.* The lack of reported serious allergic or toxic reaction in man has been mentioned under "Safety." No animal safety tests were mentioned by the manufacturer.

(iii) *Test method.* The test produces very little pain or bleeding and is essentially noninjurious. The time course of the Schick reaction (maximal reactivity at 4 to 5 days with gradual fading) is longer than that observed with the usual fungal or mycobacterial delayed-type skin reaction.

4. *Recommendations.* (a) The Panel recommends that these products should be placed in Category IIIB, licenses to be suspended, because they are crude and potentially dangerous products and the manufacturer provides no data on effectiveness (sensitivity and specificity) or stability. There are no data provided confirming completion of an identity test. Before the licenses are reinstated acceptable data based on scientifically sound methods should be submitted to demonstrate effectiveness of these products in humans. Furthermore, the manufacturer should demonstrate that the veal antigens in these products do not sensitize and do not elicit false positive reactions in sensitized individuals.

(b) Two years is a reasonable time for the recommended testing to be accomplished.

#### TRICHINELLA EXTRACT GENERAL STATEMENT

The Trichinella skin test antigen is used to indicate whether or not a patient has active or "latent" healed Trichinella infection, as manifested by an immediate Type I wheal and flare reaction. The skin test becomes positive within 2 to 3 weeks after exposure and the ability to manifest a positive skin test may persist for many years. A positive skin test is, as stated by the manufacturers "only suggestive of clinical trichinosis and should be confirmed by clinical observations or muscle biopsy." The Trichinella skin test antigen does not identify all individuals with specific immunologic experience. The antigen has not been characterized, purified, or chemically defined. It is not known whether it is sensitizing in man after repeated testing or whether it stimulates production of antibody in sensitive individuals. More information is

needed on the stability of standards used in quantitating and assessing biological properties of the product. There is no U.S. Reference Standard.

With regard to safety, there is anecdotal evidence that untoward reactions do not occur in man, but there are no data with regard to possible anaphylactic, carcinogenic, teratogenic, or mutagenic effects. There is a possibility of sensitization to foreign (rat) soluble protein or other impurities in the final product. Adequate sterility tests are performed for bacterial pathogens but not for viruses, mycoplasma, or fungi.

#### PRODUCT REVIEW

Since 1938, Trichinella extract has been prepared by the method of Bozicevich (Ref. 1). It is used in both skin and serologic tests for the diagnosis of trichinosis. The extract consists of the saline soluble constituents of dried *Trichinella spiralis* larvae harvested from muscles of laboratory infected rats by digestion in a pepsin-hydrochloric acid mixture. The rats are infected by ingesting 1 to 10 gm ground infected meat from a seed rat known to be infected with a particular strain of *T. spiralis*, and available from NIH and some health department laboratories. Approximately 40 days later these rats are sacrificed, skinned, and eviscerated; and their heads, legs, and tails are removed. After microscopic examination, animals found to have few or no *T. spiralis* larvae in the diaphragm (the muscle most susceptible) are discarded from the harvest pool. Muscles from all others are digested in a pepsin-hydrochloric acid mixture. The released larvae are recovered and washed 13 to 14 times in saline and finally once or twice in water to remove the saline. The larvae are stored at -70° C during the harvesting procedure, then desiccated over phosphoric anhydride or phosphorous pentoxide.

The dried larvae are extracted with a phenolized buffered saline. Following standardization this filtered extract comprises the skin (and serologic) testing material.

Kagan and others cited by him pointed out the need for utilizing a standardized skin test procedure, including the use of a control and accurate measurement of the size of any resulting wheal (Ref. 2). A positive skin reaction is an immediate wheal and flare reaction 15 to 20 minutes after intracutaneous injection of antigen. It is said to become positive 2 to 3 weeks following infection, and persons may remain positive to the test for up to 20 years. The more usual duration of reactivity is 5 to 10 years. A delayed reaction also occurs but is much less sensitive in detecting known infections than the immediate reaction (Ref. 3). Since circulating immunoglobulin E (IgE) concentrations are increased in human trichinosis (Ref. 4), they probably play an important role in cutaneous reactivity. However, various immunoglobulins from trichinosis patients possess antibody activity to trichinella antigens (Ref. 5).

The skin test material is obviously crude. As a diagnostic tool, the skin test has largely been supplanted by serologic tests such as bentonite flocculation (BF) and charcoal particle flocculation or agglutination. The latter test can be used in the field. A positive test provides the same diagnostic information as a skin test and does not require the intracutaneous introduction of a very crude product which by its very nature must contain soluble rat proteins and possibly also rodent viruses and mycoplasmas. The product is not tested for these potential contaminants prior to use in human subjects.

(a) **Effectiveness**—(1) **Sensitivity**. The major criticism of the skin test has been that it is much less sensitive in detecting early acute infections than the BF test, other flocculation tests, and the immunofluorescent antibody (IFA) test. Humoral antibodies that react in the BF test recede much more rapidly than reactions to the skin test. For this reason, Kagan noted that the skin test may be a useful epidemiologic tool in surveying the prevalence of human trichinosis in endemic areas while serologic tests are preferred for clinical diagnosis (Ref. 2). It is recognized that a positive skin or serologic test result on an individual in an endemic population may still need to be confirmed by muscle biopsy.

Zimmerman et al. estimated the prevalence rate of trichiniasis in the human population of the U.S. as falling between 4 and 6 percent (Ref. 6). Kagan also stated that commercial skin test antigens of low protein nitrogen content lacked sensitivity compared to more potent experimental skin test antigens (Ref. 2). The commercially available skin test antigens have also been found to be less sensitive than the BF and IFA tests (Refs. 7 and 8). However, Ward et al. found no differences between the results of the BF test and a commercial skin test in diagnosing human trichinosis (Ref. 9).

(2) **Specificity**. The skin test material is not specific for *T. spiralis* infection. It cross-reacts with *T. trichuria* as well as other helminths. Parasites causing heterologous reactions include *Ascaris lumbricoides*, *Toxocara canis* (Ref. 10) and possibly *Echinococcus* species, *filariae*, and *schistosomes* (Refs. 11 and 12). The test does not differentiate between latent and active infections.

#### TRICHINELLA EXTRACT BY LEDERLE

1. **Product**. *Trichinella* Extract manufactured by Lederle Laboratories.

2. **Description**. The Lederle product is a saline soluble extract of dried *Trichinella spiralis* larvae prepared as described in the Generic Statement.

3. **Analysis**—(a) **Effectiveness**. Skin tests with the Lederle Antigen may be negative in patients with *T. spiralis* infections (Ref. 1). The test may also be positive in infected individuals who do not develop overt disease (Ref. 2). Other comments in the Generic Statement generally apply to the Lederle product.

#### CHARACTERISTICS OF EFFECTIVENESS

(i) **Test material**—(1) **Chemical composition**. The chemical composition was not defined.

(2) **Reproducibility from lot-to-lot**. No data were available except as mentioned under "Standardization" below.

(3) **Standardization**. The tests to assess the potency of each batch of skin testing product include: (a) Ouchterlony double diffusion versus antisera prepared in rabbits or deep frozen sera from confirmed cases with a previously standardized extract as control, (b) Oudin's single immunodiffusion technique to determine the amount of active material present. Antigens identified by these techniques do not necessarily relate to those concerned with the "allergenicity" of the test material. Finally, (c) the Prausnitz-Kusner reaction is applied in healthy human volunteers to further assess the potency of the product.

(4) **Stability**. No data were available.

(5) **Sensitization**. Repeated application of the skin test material may induce a delayed type skin reaction in noninfected guinea pigs, but not the immediate wheal and flare reaction. Nothing is known of this capacity in human sub-

jects. Kim et al. observed that guinea pigs could be sensitized by multiple inoculations of prepared trichinella antigens (Ref. 3). Sensitization occurs more readily when Freund's adjuvant is also administered. There is no evidence concerning the possible sensitizing effect of the skin test antigen in humans.

(6) **Elimination by host**. No data were available.

(7) **Diluent**. The usual diluent contains phenol as a preservative, which is not sensitizing.

(ii) **Test method**—(1) **Application**. The test is administered by the Mantoux method, which is simple and reasonably accurate.

(2) **Measurement**. The reaction is irregular and difficult to measure.

(3) **Quantitative dose response**. Dose response studies are possible but are difficult owing to the irregularities of the reactions.

(4) **Duration**. An advantage of this test is that it may be read within 15 to 20 minutes after administration.

(b) **Safety**—(1) **Host response**. There is no evidence that this material causes severe skin reactions, constitutional symptoms, pain, skin irritation, scarring, pigmentation, reactivation of disease or interference with other medications. Because of its animal nature, sensitization and anaphylaxis are possible side effects. The Panel found no information concerning carcinogenic, teratogenic or mutagenic effects from this product.

(ii) **Test material**—(1) **Sterility**. The product is free of bacterial and fungal contaminants, but viruses could be present.

(2) **Purity**. The material undoubtedly contains rat proteins or their breakdown products.

(3) **Elimination by host**. No data were available.

(4) **Toxicity**. No data were available except isolated experiences with this material in human testing. The standard general safety tests are applied.

(iii) **Test method**. This test produces very little pain or bleeding and is essentially noninjurious except for the potential risk of sensitization or anaphylaxis.

4. **Recommendations**. The Panel recommends that this product be placed in Category II, unsafe and ineffective with the license for the product to be revoked.

(a) The safety considerations leading to this recommendation include:

(i) The product is likely to contain rat proteins.

(ii) Rat virus material is a potential contaminant.

(iii) The product might contain antigenic material from other parasites which may be found in rats.

(iv) The material has the potential for sensitization.

(v) The recommended dosage volume is hazardous when administered without a prior low volume sensitivity test such as a scratch test.

(vi) A safe serologic test exists.

(b) The product is judged to be ineffective as a diagnostic test:

(i) It has poor sensitivity in that it does not adequately identify individuals with specific immunologic experience.

(ii) It presumably lacks specificity in humans since cross reactions have been demonstrated to occur in animals infected with other helminths.

(iii) The product is poorly standardized.

(iv) The antigen has not been characterized, purified or chemically defined.

(v) There is no documentation of product stability.

(vi) A serologic test is available as an alternate diagnostic tool.

(c) Any person preparing this product in the future should be encouraged to isolate and purify the major active component demonstrable in immunodiffusion tests.

#### TUBERCULIN, OLD

##### GENERIC STATEMENT

Old Tuberculin (OT) is a diagnostic skin test reagent prepared from filtrates of sterilized cultures of tubercle bacilli. It is used primarily to detect delayed hypersensitivity in individuals who have had immunologic experience with *Mycobacterium tuberculosis* or *Mycobacterium bovis*.

Originally produced by Koch in the late nineteenth century, the term "tuberculin" was later extended to a wide variety of preparations capable of eliciting the reactions of delayed hypersensitivity in a sensitized host. At the present time there is considerable variation in production methods and medium constituents for OT.

A positive tuberculin test usually develops 2 to 10 weeks after initial infection with *M. tuberculosis* or *M. bovis*. Old Tuberculin possesses excellent, although not perfect, ability to identify all individuals with this specific immunologic experience. Although sensitivity tends to persist throughout life, it may wane or disappear under a variety of circumstances. When the usual causes for negative reactions are absent, failure to react to a tuberculin test is helpful in excluding the diagnosis of tuberculosis. Skin reactions to OT may occur in individuals infected with mycobacteria other than *M. tuberculosis* or *M. bovis*.

Most of the valid data on sensitivity and specificity of tuberculin have been obtained from studies using Tuberculin, purified protein derivative (PPD).

Old Tuberculin does not have a simple definable chemical composition. Variation in potency from batch to batch is almost certain to occur. Although it should be possible to standardize OT, there is no evidence that adequate current standardization methods have been employed for batch to batch or lot-to-lot equivalence.

Old Tuberculin is applied by the intracutaneous (Mantoux) or multiple puncture techniques. The Mantoux test is simple and accurate. Multiple puncture tests are simple but deliver a variable and undetermined quantity of test material into the skin.

Old Tuberculin appears to be stable under ordinary conditions of storage and has had widespread usage in millions of persons over many years, with great safety.

#### PRODUCT REVIEW

Old Tuberculin is a filtrate prepared from sterilized concentrated broth cultures of tubercle bacilli, diluted with saline/glycerine and preserved with phenol. It was first produced in the late nineteenth century by Robert Koch (Ref. 1). It has been used primarily as a diagnostic skin test reagent to detect delayed hypersensitivity in individuals who have had immunologic experience with *Mycobacterium tuberculosis* or *Mycobacterium bovis*.

Shortly after he discovered the tubercle bacillus, Koch recognized the biologic activity of the products of the organism (Ref. 2). Although his dream of using "tuberculin" as a therapeutic agent in tuberculosis was soon dispelled, the material subsequently proved to be an aid in defining and understanding the immunology and pathogenesis of tuberculosis and in elucidating the mechanisms of delayed hypersensitivity and cellular immunity in general.

The name "tuberculin" was originally used by Koch to designate the active material in the liquid medium in which tubercle bacilli had grown. The use of the term was later extended to a wide variety of preparations capable of eliciting the reactions of delayed hypersensitivity in a sensitized host (Ref. 3). Koch produced his tuberculin by growing tubercle bacilli in glycerinated meat broth for 6 to 8 weeks at 37° C, boiling to kill the organisms, evaporating the medium to one-tenth of the original volume, and filtering to eliminate the bacilli. The finished product contained about 40 percent glycerin and it was later called "Old Tuberculin". The glycerinated meat broth was later replaced by a synthetic medium consisting of dipotassium phosphate, sodium citrate, magnesium sulfate, ferric citrate, asparagine, glucose, and 10 percent glycerin. The first standardized Old Tuberculin in this country was produced by the Bureau of Animal Industry using this synthetic medium, and the product was called HCSM tuberculin (heat concentrated synthetic medium). Other changes in the method of manufacture of this product included the use of flowing steam for sterilization instead of boiling, growth of the organisms as a pellicle on the surface, the use of gauze for preliminary filtration of the medium with its mat of growth, the further addition of glycerin, and concentration by evaporation followed by dilution with a weak solution of phenol. At the present time there is considerable variation in production methods and medium constituents.

Injection of tuberculin into the skin or its application to the skin surface produces a localized reaction in sensitized United States, OT is administered intrapersonally. At the present time in the cutaneously by the Mantoux (injection) method and by multiple puncture devices. The reaction to injected tuberculin in sensitized individuals consists of an area of induration (usually with surrounding erythema) which varies in size and intensity according to the dosage of tuberculin and the sensitivity of the individual. Skin reactions to OT may occur in individuals infected with mycobacteria other than *M. tuberculosis* or *M. bovis*.

A positive tuberculin test usually develops 2 to 10 weeks after initial infection with *M. tuberculosis* or *M. bovis*. Once acquired, sensitivity to tuberculin tends to persist throughout life. It may wane with advancing age or disappear if treatment of the infection is given in its earliest stages. Sensitivity may decrease or disappear temporarily during a variety of intercurrent illnesses, during treatment with adrenal corticosteroids, and in tuberculosis patients who are very sick (Ref. 4). When the usual causes for negative reactions are absent, failure to react to a tuberculin test is helpful in excluding the diagnosis of tuberculosis.

(a) **Effectiveness**. Most of the valid data on sensitivity and specificity of tuberculin have been obtained from studies using Tuberculin, PPD (purified protein derivative). Sensitivity and specificity of OT may be affected by variations in preparation. There are also problems of standardization, arising particularly from the fact that preparations found to be equivalent in guinea pigs may not be equivalent in humans (Refs. 5 through 7). The known propensity of Tuberculin, PPD to adhere to glass or plastic surfaces (Refs. 8 and 9) raises questions about the likelihood of adsorption of protein from OT as well.

(1) **Sensitivity**. Tuberculin possesses excellent, although not perfect, ability to identify all individuals with specific immunologic experience. Virtually all tuberculosis patients will react to the intracutaneous injection of tuberculin if a sufficiently strong dose is used (Refs. 10 through 14).

The intensity of the reaction may be diminished by many factors which affect delayed hypersensitivity reactions in a nonspecific manner by mechanisms not fully understood. These factors or conditions include acute virus infections or vaccination with live virus vaccines; immunosuppression by disease, drugs, or steroid hormones; a state of general anergy such as that associated with sarcoidosis or malignancy, especially lymphoma; malnutrition, especially in children; overwhelming infection; and the waning of delayed hypersensitivity associated with advancing age (Refs. 15 through 22). In addition, there is a small proportion of individuals with tuberculosis who have none of the above conditions but who still do not react to ordinary doses of tuberculin. Although a recent publication suggests that this proportion may be as high as 20 percent

(Ref. 23), observations over many years have documented that it is usually no more than 5 percent (occasionally up to 10 percent) with the use of intermediate strength tuberculin (5 tuberculin units (TU)) and 1 percent or less with stronger (100 to 250 TU) doses of tuberculin (Refs. 10 through 13). A negative tuberculin test in patients with serious or widespread disease will usually become positive after a few weeks of treatment.

(2) *Specificity.* Although the tuberculin test is very good for the recognition of tuberculous infection, infections with mycobacteria other than *M. tuberculosis* or *M. bovis* can cause reactions to tuberculin (Refs. 24 through 26). This is not surprising since all mycobacteria and many nocardia species share antigens (Refs. 27 through 32). The specificity of tuberculin, PPD test varies geographically according to the prevalence of these other infections, specificity generally being highest in the Arctic and at high altitudes and lowest in the tropics and at low elevations (Ref. 33). Presumably, a geographic variation in specificity similar to that shown for tuberculin, PPD also applies to OT.

Specificity is intimately related to the concentration of tuberculin used for the test. A larger proportion of persons will react to high dose tuberculin than to low or intermediate dose tuberculin. Some of these individuals have been infected with *M. tuberculosis*, some with other species of mycobacteria, and some probably with other organisms that share antigens in the cell wall, such as nocardia and corynebacteria. The main value of a high-dose tuberculin test is in a negative reaction, which makes a diagnosis of mycobacterial infection unlikely in the absence of the conditions listed above which diminish all delayed hypersensitivity reactions.

#### CHARACTERISTICS OF EFFECTIVENESS

(i) *Test material.*—(1) *Chemical composition.* Extensive investigation has resulted in a wealth of information on the chemical composition of Old Tuberculin. However, it is obvious from its preparation that it is unlikely to have a simple definable chemical composition. Long's 1939 statement (Ref. 34) probably holds true today: "Old Tuberculin is not a unit substance, but a mixture of extreme complexity. Its potency is due to about one percent of its total substance. Ninety-nine parts out of a hundred are inert. Whether, in the ninety-nine parts, there are elements present capable of eliciting nonspecific reactions, is debatable, but obviously the absolute specificity of a tuberculin containing protein derivatives from beef- or milk-peptone cannot be guaranteed. Moreover, in all probability, the actual content of active principle is never twice the same."

(2) *Reproducibility.* It has long been recognized that potency can vary from batch to batch. Variation is almost certain to occur because of variations in

bacterial growth, but is difficult to assess because of poor standardization. Seibert made six batches of Tuberculin, PPD from OT in which the yield of PPD varied from 9.8 to 22.8 gm per liter of the original tuberculin filtrates (Ref. 35).

(3) *Standardization.* Following batch standardization in human populations, it should be possible to standardize OT lots against a standard preparation, using sensitized guinea pigs, provided adequate numbers of animals are used and readings are made in a fashion that obviates reader bias (Ref. 36). No evidence is provided that current standardization methods for OT employ these procedures. Standardization in an animal model may not reflect the situation in other animals or humans (Refs. 5 through 7). E. R. Long stated 35 years ago, "It is true and has been known for years that the various preparations of Old Tuberculin on the market vary greatly in their capacity to elicit reactions" (Ref. 34). This statement probably holds true now.

(4) *Stability.* Although inadequacies of standardization impede testing for stability, it is generally believed that concentrated OT is very stable under ordinary conditions of storage. Indirect evidence for stability is the fact that some concentrates from which potent OT has been made were prepared decades ago (Ref. 37).

(5) *Sensitization.* No data were found on the ability of OT to induce or augment an immunologic response.

(6) *Elimination by host.* No data are available.

(7) *Diluent.* The basic diluent is physiologic saline/glycerin with 0.5 percent phenol. These substances are widely used and are not known to have caused sensitization. Some producers add other substances (such as albumin) to "stabilize" the active principle, to inhibit adsorption, or to act as a preservative (thimerosal). No evidence was found on the relationship of these substances, other than thimerosal, to sensitization.

(ii) *Test method.*—(1) *Application.* Old Tuberculin is applied by the intracutaneous (Mantoux) or multiple puncture techniques. The Mantoux test is simple and accurate. The multiple puncture tests are simple but deliver a variable and undetermined quantity of test material into the skin.

(2) *Measurement.* The reaction to the test is a roughly circular area of induration, usually with clear-cut boundaries. The Mantoux test reaction is easily measured by trained observers. The multiple puncture methods sometimes result in one or several small reactions which may coalesce to form a circular reaction.

(3) *Quantitative dose response.* The Mantoux method produces a range of reactions that is sufficient for dose-response studies. These studies are more difficult with the multiple puncture methods because of the discontinuous distribution of reaction sizes resulting

from coalescence of multiple small reactions.

(4) *Duration of reaction.* In a study of reactions caused by Tuberculin, PPD, it was found that mean induration size was relatively constant from 24 to 120 hours (Ref. 38). There is no reason to think that OT reactions would not have a similar pattern of duration.

(b) *Safety.*—(i) *Host response.* Old Tuberculin has had widespread usage in millions of persons over many years, with great safety. There is no evidence that it produces anaphylaxis; carcinogenic, teratogenic or mutagenic effects; sensitization to the product; reactivation of tuberculosis; or interference with other medications. Infrequently, there may be a severe local skin reaction with vesiculation, pain and tissue necrosis. Very severe reactions may be associated with constitutional symptoms of fever and malaise as well as lymphangitis and lymphadenitis, but such reactions are rare. Localized scarring and change in skin pigmentation may occur infrequently following severe reactions.

(ii) *Test material.*—(1) *Sterility.* The method of preparation can be expected to kill all microbial agents. The standard sterility tests seem to be sufficient for this particular substance.

(2) *Purity.* It is highly unlikely that any dead microbial agents are present. No tests are done for non-microbial contaminants. Varying amounts of the culture medium are present. The amount and nature of culture material will depend on the type of medium used to grow the tubercle bacilli. Other contaminants are highly unlikely.

(3) *Elimination by host.* No data are available.

(4) *Toxicity.* Old Tuberculin has been extensively used for approximately 80 years with no indication of toxicity when used intracutaneously in the usual dosages. Pinner and Valdrich produced progressive wasting disease in normal guinea pigs by repeated injection of culture filtrates (Ref. 39). The standard required safety tests should be sufficient to protect against the inadvertent introduction of toxic materials.

(iii) *Test method.* The intracutaneous Mantoux and multiple puncture methods of injection produce very little pain or bleeding, and are essentially non-injurious.

#### TUBERCULIN, OLD (TINE TEST) BY LEDERLE

1. *Product.* Tuberculin, Old, (Tine Test) manufactured by Lederle Laboratories.

2. *Description.* The Lederle Tuberculin, Old, Tine Test is stated to be an intracutaneous test for the detection of tuberculin reactivity. It is recommended for screening rather than for diagnostic purposes (Ref. 1).

The Tine Test consists of a white plastic applicator with a stainless steel base, with four tines or prongs, each 2 mm in length. The tines are coated with concentrated, partially dried Old Tuberculin, and are protected by a removable plastic cap.

The Old Tuberculin (OT) is derived from culture filtrates of three strains of *Mycobacterium tuberculosis* (C, DT and PN) which were obtained in 1957 from Dr. J. M. Hejl, Chief, Biological Products Licensing Section, U.S. Department of Agriculture. The cultures are stored on solid egg medium at minus 60° C. At infrequent intervals, they are removed from storage, grown on veal tuberculin broth, replanted on solid egg medium, and stored again after adequate growth has occurred.

A production batch starts with a synthetic liquid medium containing asparagine, glycerine, dextrose and inorganic salts. Each bottle is inoculated with a piece of surface pellicle grown from one of the three seed cultures which have been incubated in veal infusion broth. After incubation, bottles which contain a surface pellicle and clear, unsedimented broth are heated, pooled, filtered, and concentrated. The concentrated filtrate is clarified and assayed for glycerin. Enough glycerin is then added to bring its concentration to 4.0 percent. Pooled concentrates representing the three seed cultures are autoclaved and tested for safety and sterility. If a batch is found to be contaminated, it is reesterilized and tested again for safety and sterility. After all tests are satisfactory, the concentrates are pooled, and this mixture (bulk OT) tested for potency, and again for safety and sterility.

The Tine Test unit marketed since 1965 is mechanically dipped into bulk OT. The concentrate is stabilized with acacia and lactose. The stabilized bulk OT is stored at minus 25° C until needed for dipping. Each Tine Test is dipped once by a mechanized automated process which deposits the stabilized OT on each tine. After dipping, a plastic cap is mechanically placed over the tines, and the entire unit is sterilized by ethylene oxide gas.

To apply the Tine Test, the tines are uncovered, and the unit is quickly and firmly applied to the cleansed skin of the forearm, holding the unit in place for approximately 1 second. Sufficient pressure should be applied to leave a circular depression on the subject's skin.

It is recommended that the test be read at 48 to 72 hours, and that any induration be measured. The current recommendations of the American Thoracic Society state that a vesicular reaction is tantamount to a positive Mantoux Test using 5 TU of PPD, and that any other reaction to the Tine Test resulting in induration measuring 2 mm or more in diameter should be rechecked with 5 TU of PPD by the Mantoux technique. The package insert submitted by the manu-

facturer, dated 12/73, still uses the old recommendations of the American Thoracic Society which were superseded in 1971 (Ref. 1).

3. *Analysis*—(a) *Effectiveness*. Most of the literature on the effectiveness of the Tine Test concerns the product marketed prior to 1966, which was hand-dipped into unstabilized OT. Because of changes in the manufacturing process, the following comments apply only to the current product unless otherwise stated.

Only one study was directly related to the sensitivity of the Tine Test (Ref. 2). Tine Tests were given to 84 patients hos-

pitalized with bacteriologically proven pulmonary tuberculosis; all reacted with at least 2 mm of induration. Additional information submitted by the manufacturer on batch 104 showed that only 1 of 24 tuberculosis patients did not react to the Tine Test; this patient and one other did not react to 5 TU of PPD.

Other studies compare the Tine Test with a reference test using 5 TU of PPD given by the Mantoux technique. The degree of agreement of reactions produced by the Tine Test with those from the reference test are summarized in Table 1 (Refs. 3 through 6).

TABLE 1.—Comparison of reactions from tine test with a reference test

Reference PPD	Number of subjects	Co-positivity	Co-negativity	J	Percent of false positive tine tests <sup>1</sup>
PPD-S	171	95.3	99.9	+93.4	2.3
PPD-S	289	98.4	63.9	+64.3	16.5
Not stated	145	100.0	74.7	+74.7	62.9
Do.	29,236	92.1	96.5	+98.6	18.5

<sup>1</sup> Sensitivity plus specificity minus 100 pct (ref. 12).  
<sup>2</sup> (Tine +, PPD-) ÷ (total Tine +), in percent.

In only one study (Ref. 4) were the test sites randomized, and the reactions read independently. For all studies, a positive Tine Test reaction was defined as 2 mm or more of induration. A positive reaction to PPD was defined as 6 mm or more induration in a study (Ref. 3) conducted among Eskimos in Alaska where heterologous reactions are almost unknown; in the other studies, a positive reaction to PPD was defined as 10 mm or more induration. The results indicate that the Tine Test identified nearly all positive reactors to 5 TU of PPD, i.e., the Tine Test has a high degree of co-positivity with the standard tuberculin test. It does

less well in identifying negative reactors to PPD. The degree of agreement between the two tests, measured by the J statistic, is largely determined by the co-negativity. Among persons classified as positive Tine Test reactors, a considerable proportion were found to be negative to 5 TU of PPD by the Mantoux technique.

These indices of agreement varied markedly with geography in the large study conducted by the manufacturer (Ref. 6). The geographic areas were unfortunately not identified. A summary of the findings is given in Table 2.

TABLE 2.—Comparison of tine test and Mantoux in 9 geographic areas

Geographic area	Number of subjects	Co-positivity	Co-negativity	J	Percent of false positive tine test reactions <sup>1</sup>
II	3,027	93.1	99.4	+92.5	10.8
III	2,621	85.5	98.3	+83.8	24.4
IV	6,754	92.1	95.1	+87.2	10.4
V	6,244	90.6	97.4	+84.0	54.4
VI	1,208	92.9	93.2	+86.1	30.5
VII	793	91.7	80.8	+78.5	27.4
VIII	581	71.1	99.6	+70.7	5.9
IX	7,259	95.3	95.1	+90.4	21.2
X	2,008	71.7	99.7	+71.4	13.1

<sup>1</sup> Sensitivity plus specificity minus 100 pct (ref. 12).  
<sup>2</sup> (Tine +, PPD-) ÷ (total Tine +), in percent.

In two areas, the Tine Test failed to identify almost 30 percent of the positive reactors to PPD. Co-negativity is good in all areas, but a high value of this index is expected whenever prevalence is low, as it was in this study. In one area, more than half of the Tine Test positives were negative to 5 TU of PPD given by the Mantoux technique. It should be noted that some of the variation noted between regions might have resulted from the use of different batches.

A fifth study is of limited value because reactions to PPD measuring 1 to 9 mm in diameter were not tabulated (Ref. 7). Among 111 patients admitted to medical wards who had 10 mm or more induration to 5 TU of PPD-S, 26 had

Tine Test reactions of less than 2 mm, a co-positivity index of only 77 percent. A sixth study used tableted PPD which was then diluted and stored, raising the possibility of loss in potency from adsorption (Ref. 8). Using criteria for positive reactions of 2 mm or more for the Tine Test and 5 mm or more for the Mantoux, co-positivity was 99.0 percent and co-negativity 93.7 percent, giving a J value (defined in Table 1) of agreement of 92.7 percent. Only 7.8 percent of the Tine Test positives were not confirmed by the Mantoux technique.

Thus it appears that in most geographic areas, the Tine Test is capable of detecting practically all positive reactors to the standard tuberculin test, at

a cost in some areas of producing a high proportion of positive reactions that are not confirmed by the Mantoux test with 5 TU of PPD. In some instances, the ability of the Tine Test to detect Mantoux reactors was less satisfactory. This seriously interfered with its value as a screening test. The reasons for the occasional poor co-positivity are not known but conceivably could have been due to failure to coat the tines in the dipping process or to differences in potency between tuberculin batches.

#### CHARACTERISTICS OF EFFECTIVENESS

(1) *Test material*—(i) *Composition*. The chemical composition of this particular product has not been studied. It should be noted that the manufacturer's protocol states that if a batch of tuberculin concentrate is found to be contaminated, it is resterilized and used. Such batches may contain products of bacteria other than *M. tuberculosis*.

(2) *Reproducibility*. The manufacturer submitted comparisons of reactions produced by Tine Tests made from 6 different batches with reactions produced by PPD given by the Mantoux technique (Ref. 6). Moderate variation was noted, but it is not possible to disentangle the effect of batch variation from the effects associated with geography.

3. *Standardization*. The tuberculin on the tines is standardized in a laboratory system utilizing guinea pigs sensitized by the injection of heat-killed tubercle bacilli suspended in mineral oil. At least four different dilutions of the material to be tested and similar dilutions of the U.S. reference standard are placed intracutaneously into specified sites on at least four guinea pigs. The materials tested for potency are the concentrated filtrate and the material eluted from the tines of the final product. The elution of the tines is done by placing 20 randomly selected Tine Tests units into a container with 10 ml of physiological saline and incubating them at room temperature for 1 hour with periodic shaking. For the concentrated filtrate, satisfactory potency is 3.2 to 4.8 times that of the U.S. Standard Old Tuberculin (an allowable variation of 20 percent); for the material eluted from the tines, the average potency for each Tine Test unit must be equivalent to 1/2700 to 1/1350 of the undiluted U.S. Standard Old Tuberculin (an allowable variation of 33 percent). A recent study has indicated that this method of standardization is inadequate (Ref. 11).

Standardization in humans has been done in the populations noted earlier (Refs. 3 through 8). Only one of these studies had a good experimental design, although the method of analysis may be criticized for omitting doubtful reactions in calculations of indices of agreement (Ref. 4). As can be seen in Tables 1 and 2, there was considerable variation in the results of the reported comparative studies. The variations may be related to the fact that most studies had poor experimental designs, to variations in the potencies of the Tine Test or reference tuberculins, or to true variation associated

with some unknown geographic factor. The evidence suggests that equivalence of the Tine Test with the standard Mantoux test among humans may be fairly claimed in some but not all studies.

Supplemental information from the manufacturer indicates that all batches have been compared with PPD by the Mantoux technic in humans including some tuberculosis patients (Ref. 13).

(4) *Stability*. Only two batches of tuberculin have been used long enough to yield meaningful information on stability. At 25° C, there appears to be little if any loss of potency insofar as this can be judged from the unrandomized tests done on only four guinea pigs and not read blindly.

(5) *Sensitization*. No data were given for this product. It is presumed that induction and augmentation of immunologic responses are generally similar to that for other tuberculin tests (see Generic Review on Old Tuberculin).

(6) *Elimination by host*. No data were given for this product. It is presumed that elimination is generally similar to that reported for PPD Tuberculin (see Generic Statement on PPD Tuberculin).

(7) *Diluent*. Documentation was provided by the manufacturer to demonstrate that the stabilizing and thickening agents cause no reaction and do not interfere with the reading of the tests (Ref. 17). In an interoffice report by D. H. Matson to R. N. Fallon dated May 27, 1966, it was documented that utilization of tuberculin-free tines carrying the stabilizing agents produced reactions that were no different from blank tines when tested in 100 human volunteers. Erythema of approximately 1 mm was common at 24 hours, but more severe reactions were almost never seen. The manufacturer also quotes a study by Kilgman of Philadelphia which showed that acacia did not produce immediate or delayed reactions in the normal subject which would interfere with interpretation of a delayed skin reaction. MacLaren in California tested 10 atopic patients who had strongly positive intracutaneous tests to acacia in a dilution of 1:1000. These patients were tested with acacia-coated tines and naked tines as a control. All control reactions were negative but 8 of the 10 patients had immediate wheals around the penetration sites of the coated tines. At 24 hours, eight patients had no reactions, one had 10 mm of erythema, which was gone by the next day, and one did not return for a reading.

(ii) *Test method*—(1) *Application and dosage*. Application of the test is extremely simple. This is one of the major advantages of the test. The tines can be kept at hand in a desk drawer without refrigeration, as long as the temperature does not exceed 30° C. They can be used immediately without preparation except cleaning the skin. After use, the entire unit is discarded.

On the other hand, the dosage of tuberculin administered is not as accurate as a measured amount delivered by nee-

dle and syringe, as evidenced by the non-uniformity of the reactions around each of the four tines which is often noticed. Two studies have indicated that variation between duplicate Tine Test reactions is of similar magnitude to that resulting from duplicate Mantoux tests with 5 TU of PPD (Refs. 4 and 8). A smaller study on general hospital patients showed greater variation between duplicate Tine Test results (Ref. 7). In a fourth study, 100 positive tuberculin reactors were given three successive Tine Tests at 2-day-intervals (Ref. 9). The results of this study are summarized in Table 3.

TABLE 3.—Results of 3 successive tine tests in positive tuberculin reactors

Reaction criteria	Test 1	Test 2	Test 3
Percent less than 2 mm	0	31	14
Mean induration, millimeters	5.8	4.1	5.4

The cause of the reported variation between tests was not known, but variation in the amount of tuberculin delivered into the skin cannot be ruled out from the published data.

(2) *Measurement*. The area of induration is usually round, although partial coalescence of reactions around individual tines may produce an irregular area. None of the available reports indicate any difficulties in measurements.

(3) *Quantitative dose response*. The range of reaction sizes is more limited than for the Mantoux technic (Refs. 3, 5, and 8). Inability to control the dosage and the discontinuity in the distribution of reaction sizes resulting from coalescence of reactions around individual tines make dose-response studies difficult.

(4) *Duration of reaction*. The manufacturer recommends reading the reactions at 48 to 72 hours. In the data submitted, the agreement with the Mantoux technic was essentially the same for tests read at less than 96 hours and for those read at 96 hours to 144 hours (Ref. 6).

(b) *Safety*—(i) *Host response*. In six studies quoted here (Refs. 3 through 5, 7 through 9) no reference was made to any adverse reactions. In 31,051 Tine Tests made by 38 investigators for the manufacturer, only one severe inflammatory reaction was reported (Ref. 6). Many million units of Tine Tests have been sold over a 5-year period, and only 13 incidents of possible adverse effects were reported to the manufacturer. Nine of these reactions were allergic and varied from hives to angioneurotic edema. The remaining four were pain and bleeding, a dark nodule at the application site, a streptococcal cellulitis, and a severe local reaction.

As in any tuberculin test, severe skin reactions can occur occasionally with vesiculation and necrosis. In some of these, lymphangitis and lymphadenitis and symptoms of malaise and fever may occur for a day or so. Rarely, in severe reactions, scarring and changes in pigmentation may occur.

A single fatality, which occurred a few minutes after receiving a Tine Test has been reported (Ref. 14). No determination was made on the etiology of this occurrence (Refs. 15 and 16). Reactivation of disease and interference with other medications have never been reported.

The Panel found no information concerning potential carcinogenic, teratogenic, or mutagenic effects from this product.

Sensitization to tuberculin in this dosage is unlikely. The possibility of sensitization to acacia is unknown.

(ii) *Test material*—(1) *Sterility*. Tests for viable mycobacteria, both by guinea pig inoculation and by culture, are done on the pooled concentrated filtrates. Although the manufacturing process permits resterilization of bulk OT, the company has reported that no resterilization has been required for at least the last 15 years.

Sterility tests on the final product are performed on 40 Tine Test units from each sterilizer load of unspecified size. Half of the discs from the units are cultured in 20 tubes of thioglycollate medium, and half are cultured in 20 tubes of soybean-casein digest medium.

Nonbacterial agents are unlikely to be introduced into the manufacturing process. In addition, mycoplasma agents are not likely to be present nor to survive drying on the tines.

(2) *Purity*. Other contaminants are unlikely, except for the possibility of products from bacterial contaminants in batches that were resterilized because of the presence of such agents.

(3) *Elimination by the host*. There were no specific data on elimination of the material by the host.

(4) *Lack of toxicity*. Massive human experience suggests that toxicity does not occur. The material from 24 Tine Test units is eluted in 6 ml of saline. Two guinea pigs are injected with 5 ml of a 1:4 dilution of the eluate, and two mice are injected with 0.5 ml of this dilution. Over the past 5 years, an average of more than 60 batches per year have been so tested. Only two batches failed the initial safety test, probably as a result of animal colony epidemics.

(iii) *Test method*. The Tine Test causes slightly more pain than the Mantoux technic according to a trial among 41 students at the Johns Hopkins School of Hygiene (Ref. 10). However, pain is fleeting and slight. Bleeding is occasionally seen but is very slight. The test is essentially noninjurious.

4. *Recommendations*. (a) The Panel recommends that this product should be placed in Category I because the present product has been demonstrated to be safe and effective.

(b) Since there is ample evidence that batches of tuberculins may vary widely in potency, it is necessary that each new batch be tested for potency (sensitivity) in infected humans. Potency tests in guinea pigs do not necessarily reflect potency in human beings. Since the test is to be used for screening purposes, it is necessary to test only for sensitivity and not specificity. The Panel recommends

that sensitivity be sufficient to elicit positive reactions in 100 percent of at least 50 persons who are known to have had bacteriologically confirmed tuberculosis and who are tuberculin positive as demonstrated by a simultaneous Mantoux test with 5 TU of PPD. Other conditions are recommended for continued marketing.

(c) Quality control: Because of the possibility that the mechanical dipping process may occasionally fail to deposit tuberculin on the tines of an individual unit, routine testing of the final product should include a test for protein or other test materials on the tines of randomly selected individual units.

(d) Labeling changes: (1) If the American Thoracic Society recommendations are to be included in the labeling, the current version should be used.

(ii) Change the precautions to state that the material used for the confirmatory Mantoux (intracutaneous) test shall be 5 TU Tuberculin, PPD.

(iii) Delete references implying equivalent significance of reactions to this product and to those of 5 TU of Tuberculin, PPD by the Mantoux test.

TUBERCULIN, OLD (MANTOUX TEST)  
BY ELI LILLY

1. *Product*. Tuberculin, Old, Human, for Mantoux Test, U.S.P. manufactured by Eli Lilly and Co.

2. *Description*. Tuberculin, Old, Human, for Mantoux Tests, U.S.P. as prepared by Eli Lilly and Company is distributed in a package containing two vials. One vial contains Old Tuberculin (OT) representing approximately 0.1 ml of concentrated OT diluted 1:100 with 50 percent glycerin and preserved with 0.5 percent phenol. The other vial contains sodium chloride injection with 0.5 percent phenol in sufficient volume that its injection into the vial containing OT will produce a test solution of 1:1000 OT. This final solution is said to contain 0.1 mg OT per 0.1 ml, or 10 U.S. units (TU) per 0.1 ml.

This OT is prepared from human tubercle bacilli, strain H-37, received on 4 September 1932 from the U.S. Public Health Service. The organism was maintained on "TB agar slants" from 1951 to the present. The last batch of tuberculin concentrate was produced in May, 1968 after the organism had been grown on glycerin-veal infusion-peptone broth for at least 6 weeks. Flasks that appeared to be uncontaminated were heated in flowing steam for 1½ hours. The flask contents were then filtered through sterile filter paper and diatomaceous earth. The filtrate was evaporated to one-tenth of its original volume, preserved with phenol at a final concentration of 0.5 percent, and stored in the chill room at 2° to 5° C for at least 1 month. It was then diluted 1:100 with 50 percent glycerin containing 0.5 percent phenol, and stored again in the chill room until measured into vials for distribution.

3. *Analysis*—(a) *Effectiveness*. No evidence was presented to show that OT from the current batch has ever been tested for sensitivity or specificity in humans, or that it has ever been compared to a standard tuberculin in humans. Each lot is standardized in four sensitized guinea pigs without randomization of test sites or "blind" readings. The procedure used by Lilly (and others) has been shown to be inadequate for standardization (Ref. 1). This OT has not been tested in animals for specificity, nor for co-negativity with a standard tuberculin.

## CHARACTERISTICS OF EFFECTIVENESS

(1) *Test material*.—(1) *Chemical composition*. It has not been chemically defined.

(2) *Reproducibility*. Batch-to-batch variability seems to be a minor problem since the batch in current use was prepared in 1968. No data were given on reproducibility from lot-to-lot except that each lot passes the usual potency test using four guinea pigs, nonrandom test sites, and nonblind readings. Lots are produced at approximately yearly intervals.

(3) *Standardization in laboratory system*. Old Tuberculin can be standardized in guinea pigs against a standard tuberculin preparation if a sufficient number of animals are used and if the proper experimental design is followed (Ref. 1). There is evidence that the results in guinea pigs may not be directly transferable to man (Refs. 2 and 3), although there is no information on this point for this particular product.

(4) *Stability*. The only data furnished on stability referred to batches prepared prior to the date of the present batch. Not only are the findings of little relevance, but the experimental design was improper because it lacked randomization of test sites and blind readings. In addition, the fact that the majority of reactions were measured as 5 or 10 mm suggests that little care was taken in measurement.

(5) *Sensitization*. Sensitization studies were conducted in nine guinea pigs using a batch of OT prepared prior to the one in current use. The findings were interpreted as showing that the amount of phenol in the large challenging dose was at the toxic level for guinea pigs. No data were available on the currently used batch.

(6) *Elimination by the host*. No data were given.

(7) *Diluent*. The diluent is generally considered not to cause sensitization or reactions. In 1964, the diluent was reported to have caused no reactions in any of 268 male prisoners.

(ii) *Test method*.—(1) *Application of test*. The Mantoux method of intracutaneous injection is relatively simple and accurate.

(2) *Measurement of reactions*. Although there was no information on this particular product, there is no reason to believe that the reactions differ qualitatively from those produced by other Old Tuberculin. The reactions are presumably round with clearcut boundaries.

(3) *Quantitative dose response*. There were no data on this particular product except for the standardization results of each lot in guinea pigs. It appears that it can produce a range of reaction sizes that is adequate for dose-response studies.

(4) *Duration of reaction*. No data were given. The package brochure states that reactions appear within 6 to 8 hours, reach a maximum size in 24 to 48 hours, and usually disappear in 6 to 10 days.

(b) *Safety*.—(i) *Host response*. No specific data were available on adverse reactions to this product. The package brochure states that severe local reactions uncommonly occur at the injection sites and that in such instances necrosis and scar formation may occur. Presumably,

constitutionally symptoms may accompany some severe local reactions.

It is possible that some of the broth components, particularly the veal infusion, may be sensitizing.

The Panel found no information on potential carcinogenic, teratogenic, or mutagenic effects from this product.

(ii) *Test material*.—(1) *Sterility*. As a check on the absence of viable tubercle bacilli, an unspecified number of guinea pigs is injected with an unspecified amount of each lot of concentrate, observed for 6 weeks, and necropsied to check for tuberculous lesions.

For a bulk sterility check, two vessels of fluid thioglycollate medium are inoculated with 5 ml of test material and incubated for 14 days. For a filled sterility check, 20 smaller vessels of fluid thioglycollate medium and 20 vessels of trypticase soy broth are inoculated "with the entire contents of the vials of test vaccine (sic) per vessel" and incubated for 14 days. If growth is found in any of the filled sterility tests, two retests may be performed, the second retest using twice the number of vessels and being allowed only if the bulk sterility check is negative. No tests are done for viruses, mycoplasmas, or fungi.

(2) *Purity*. No tests are done for contaminants.

(3) *Elimination by host*. No data were given.

(4) *Lack of toxicity*. The manufacturer stated that only two complaints have been received in the past 5 years. In one instance, a physician complained that reactions were not produced in known tuberculin positive patients; and in the other, strongly positive reactions (15-20 mm) were noted in six healthy infants.

Two guinea pigs are injected subcutaneously (sic) with 5 ml of test material at 1:1000 dilution and 2 mice are injected intraperitoneally with 0.5 ml of the same dilution. All animals must survive for 7 days without obvious symptoms.

(iii) *Test method*. The test produces very little pain or bleeding and is essentially noninjurious.

4. *Recommendations*. (a) The Panel recommends that this product should be placed in Category IIIB, license to be suspended, because there is inadequate evidence of standardization, no evidence of effectiveness in humans, and a question of safety. Before the license is reinstated, acceptable data based on scientifically sound methods should be submitted to demonstrate effectiveness in humans (Refs. 4 and 5). These data should include for each batch:

(i) Comparison of the product with the Tuberculin standard (PPD) by means of dose response curves in humans and animals.

(ii) Distribution of reactions in persons known to be infected and in those presumed to be uninfected with *M. tuberculosis* and other mycobacteria.

(iii) Chemical characterization (including protein, carbohydrate, lipid and nucleic acid).

(b) In addition the manufacturer should:

(i) Provide evidence of stability of the material in the final container (i.e., possible adsorption to glass or plastic).

(ii) Demonstrate that:

(1) The veal antigens in the product do not sensitize.

(2) The veal antigens in the product do not elicit false positive reactions in sensitized individuals.

(c) Labeling: The product brochure dated October 1974 should include the latest American Thoracic Society (ATS) recommendations for the interpretation of the skin test. Departures from the ATS recommendations should be justified.

OLD TUBERCULIN BY MASSACHUSETTS  
PUBLIC HEALTH BIOLOGIC LABORATORIES

1. *Product*. Old Tuberculin manufactured by Massachusetts Public Health Biologic Laboratories (MPHBL).

2. *Description*. Massachusetts Public Health Biologic Laboratories Old Tuberculin (OT) is prepared as a concentrated sterile culture filtrate of strain H-37 tubercle bacilli originally obtained in 1929 from Saranac Laboratory. Organisms are grown in gelatin hydrolysate medium containing 5 percent glycerin. The concentrated bulk product is preserved with 0.5 percent phenol. The diluted preparation contains 0.4 percent human albumin as a stabilizer (Ref. 1).

The stock concentrate was prepared in 1947 by incubation of 10-day seed cultures at 35° C for 8½ weeks. This stock culture was heat sterilized (1 hour at 100° C), followed by cheese cloth filtration and concentration of the filtrate to ¼ of the original volume by vacuum evaporation. It was then dialyzed against 0.5 percent phenol solution and Seitz-filtered. This material was designated as Lot OT-48. Several sublots were prepared in phosphate buffer containing 50 percent glycerin, one of which was the current lot OT-48-B-3B. Current material is prepared approximately every 6 months by diluting a portion of the sub-

lot (OT-48-B-3B) to a concentration said to be sufficient to make each 0.1 ml of this diluted material equivalent to 5 TU of the U.S. OT standard. The diluted product is dispensed in 2 ml vials.

3. *Analysis*.—(a) *Effectiveness*. In 1972 data were obtained on comparison of this product's potency with that of standard PPD-tuberculin stabilized with Tween-80 (the latter having been standardized against PPD-S, the International Reference Standard). In this study (Ref. 2), 191 employees of a tuberculosis treatment facility were tested and the following results were obtained:

MPHBL-OT	PPD-tuberculin with Tween		
	Positive	Negative	Total
Positive	65	0	65
Negative	15	111	126
Total	80	111	191

Positive, equal to or greater than 10 mm induration.

No individuals who were negative to PPD were positive to MPHBL-OT. Sixty-five employees positive to PPD were also positive to MPHBL-OT, but 15 positive to PPD were negative to MPHBL-OT. Results of this study indicate that MPHBL-OT was less potent than PPD but not necessarily less specific. No pertinent data are given with regard to specificity of MPHBL-OT. In an earlier study (1960), a comparison was made of mental hospital patients between PPD-S (not stabilized with Tween) and MPHBL-OT (Ref. 3). Based on the absolute numbers of reactors (rather than percentages) the results of this study are summarized as follows:

MPHBL-OT	PPD-S		
	Positive	Negative	Total
Positive	917	8	925
Negative	316	67.1	389

In this study, 917 (74 percent) of 1233 of the individuals were positive to both PPD-S and MPHBL-OT, but 316 were positive to PPD-S and negative to MPHBL-OT. Results indicated considerably less potency for the MPHBL product when compared with PPD-S. The producer attributed the lesser potency at that time to the use of gum arabic as a stabilizer (Ref. 4). At a later date, human albumin was substituted for gum arabic (although animal data suggested that Tween-80 was equal to albumin in stabilizing potency).

(i) *Test material*.—(1) *Chemical composition*. The final diluted crude culture filtrate mixture contains OT concentrate (tubercle bacillus products and glycerin broth components), human serum albumin, boric acid, sodium borate, sodium chloride and thimerosal. The chemical composition of OT concentrate is not further defined.

(2) *Reproducibility*. No data were available.

(3) *Standardization*. Efficacy data provided by the manufacturer state that tests are carried out as specified in the

Code of Federal Regulations, Title 21, Subchapter F, § 610.11 (general safety tests) plus §§ 650.11 and 650.14. (The usual potency tests compare the product in at least 4 guinea pigs against the U.S. Standard OT.) No data were provided however, other than the two studies previously referred to under "Effectiveness." It should be noted that these producers are among those who have called attention to the fact that different results can be obtained in guinea pigs and in man.

(4) *Stability.* In an internal memorandum dated March 1962, the manufacturer reported that an MPHBL-OT product, with human albumin as the stabilizer, after 7 months storage at 5° C actually resulted in slightly larger delayed skin reactions in 23 human volunteers than did freshly diluted material. The details of the skin testing procedure and reading of reactions were not provided. If these tests were properly performed and measured, diluted MPHBL-OT stabilized in normal human serum albumin is stable over this time interval. In other potency studies in man using MPHBL-OT with human albumin as stabilizer, a 16 percent decrease in delayed skin reaction size was noted in OT stored at 35° C for 42 days when compared to OT stored at 5° C for the same period. Thus storage at approximate body temperature did not result in significant loss of potency over this time interval.

(5) *Sensitization.* No data were provided.

(6) *Elimination by host.* No data were provided.

(7) *Diluent.* The diluent contains thimerosal which has been reported to induce hypersensitivity. The Panel's comments regarding the sensitizing capacity of thimerosal apply to this product. See the statement on "Thimerosal as a Preservative." The package insert, however, implies that the only preservative is phenol. This discrepancy has been clarified in a recent letter from Dr. Grady, the Laboratory Director who stated: "Our circular apparently bears an historical error in stating the preservative to be 0.5 percent phenol. This stems from the time when we distributed only the concentrates and the consumer was obliged to prepare his own dilutions. These concentrates then and now are indeed preserved with 0.5 percent phenol. They are diluted 1:1000 to 1:2000 to prepare the diluted clinical product which renders the phenol content negligible and thimerosal, 1:30,000 is provided in the diluent." The diluent also contains human serum albumin which is not known to be immunogenic in man (except in very rare individuals with analbuminemia).

(1) *Test method.*—(1) *Application.* The product is inoculated intracutaneously by the standard Mantoux method in 0.1 ml volume. This method is reasonably simple and accurate.

(2) *Measurement.* The reactions produced are similar to those induced by tuberculin.

(3) *Dose response.* No data were provided.

(4) *Duration of reaction.* The duration of reaction is presumably similar to that observed for other tuberculin preparations.

(b) *Safety.*—(1) *Host response.* Only anecdotal information was given, namely that millions of doses have been dispensed without reported adverse reactions and that MPHBL-OT is comparable to PPD solution without Tween-80 in its lack of production of adverse reactions (Ref. 5). The Panel found no information on potential carcinogenic, teratogenic, or mutagenic effects from this product. As in the case of other delayed hypersensitivity skin test products, there is no reason to believe that testing with MPHBL-OT causes excessive pain, skin irritation, or scarring.

(1) *Test material.*—(1) *Sterility.* No data were provided except for the statement that the required sterility tests are performed.

(2) *Purity.* No data were provided on purity. The generic statement on purity presumably applies to MPHBL-OT.

(3) *Elimination by host.* No data were available.

(4) *Toxicity.* No untoward toxic reactions have been reported (the manufacturers have dispensed several million doses during the past 5 years).

(iii) *Test method.* The test produces very little pain or bleeding and is essentially noninjurious.

4. *Recommendations.* (a) The Panel recommends that this product should be placed in Category IIIB, license to be suspended, because the available evidence supplied by the manufacturer demonstrates that the product failed to identify a significant portion (19 percent) of the tuberculin positive population when compared to the PPD standard. Before the license is reinstated, acceptable data based on scientifically sound methods should be submitted to demonstrate effectiveness in humans (Refs. 6 and 7). The data should include for each batch:

(i) Adequate steps to ensure that the product has the proper potency.

(ii) Comparison of the product with the tuberculin standard (PPD) by means of dose response curves in humans and animals.

(iii) Distribution of reactions in persons known to be infected and in those presumed to be uninfected with *M. tuberculosis* and other mycobacteria.

(iv) Chemical characterization (including protein, carbohydrate, lipids and nucleic acids).

In addition the manufacturer should provide evidence of stability of the material in the final container (i.e., possible absorption to glass or plastic).

(b) *Labeling.* The following information, in addition to that in the product brochure dated August 1968, should be included in the labeling:

(i) State that a positive skin test may indicate infections with other mycobacteria.

(ii) Delete paragraph one under "Discussion" since this is erroneous.

(iii) While pertinent references are highly desirable, references 1, 2, and 3 should be deleted as unrelated to the product.

(iv) A precaution against use in thimerosal sensitive subjects.

(v) The latest American Thoracic Society (ATS) recommendation for the interpretation of the skin test should be stated. Departures from the ATS recommendations should be justified.

#### OLD TUBERCULIN BY TEXAS STATE DEPARTMENT OF HEALTH

1. *Product.* Old Tuberculin manufactured by Texas State Department of Health.

2. *Description.* Texas State Department of Health Old Tuberculin is a sterile concentrated culture filtrate from tubercle bacilli grown on Dorset's medium. Seed cultures for this product are Dorset strains PN, DT, and C obtained in 1945. After the organisms have been killed, the filtrate is concentrated and adjusted to a final concentration of 10 or 100 U.S. units of tuberculin per 0.1 ml. The diluent is a solution of borax, boric acids and sodium chloride, containing 0.04 percent gum arabic, and a final concentration of 0.25 percent phenol as a preservative.

3. *Analysis.*—(a) *Effectiveness.* No information was submitted to show that the material has ever been tested in humans for sensitivity or specificity. Other than the standardization procedure, the only test remotely resembling a test for sensitivity and specificity is the intracutaneous injection of final container material into each of the two guinea pigs, one sensitized and the other not sensitized.

#### CHARACTERISTICS OF EFFECTIVENESS

(1) *Test material.*—(1) *Chemical composition.* No chemical definition of the product was submitted except what

could be inferred from the method of preparation.

(2) *Reproducibility.* No data were provided on lot-to-lot reproducibility except by a communication on March 28, 1975, from Mr. Phillip J. Forsyth, Responsible Head of the Biologics Production Division of the Texas State Department of Health, in which he said that "Our last twelve lots (M-21 through M-26, and N-21 through N-26) were made up from the same concentrate using the same proportionate dilutions with no observable change in potency over the past 15 years . . ."

The above lots in diluted form were compared with the U.S. standard and in every instance met the currently required criteria for equivalency, which have been shown to be capable of detecting only gross variations in potency (Ref. 1).

(3) *Standardization.* This is carried out only by the required procedure using four sensitized guinea pigs, without randomization of test sites and without "blind" readings. No information was submitted to indicate whether or not this procedure is comparable to standardization in human subjects.

(4) *Stability.* The only specific data were provided by accelerated stability tests at 37° C for 20 days. The manufacturer points out that this is highly stable material because lots in current use were made from concentrated stock made up and tested in 1959. The manufacturer states that lots in final diluted form have been successfully retested several times for extension of dating periods and have maintained potency.

" . . . Current lot N-26 was first tested in April 1969, and then retested in March 1972, April 1972, and March 1974." While no specific stability tests are available beyond 20 days at 37° C, there is no reason to suggest that this product is less stable than any other Old Tuberculin.

(5) *Sensitization.* No data were given.

(6) *Elimination by host.* No data were given.

(7) *Diluent.* The final lot is made up by diluting the stock concentrates using a borax-boric acid sodium chloride solution containing 0.04 percent acacia and a final concentration of 0.25 percent phenol.

(1) *Test method.*—(1) *Application.* The material is administered by the Mantoux method, which is reasonably accurate and simple.

(2) *Measurement.* Although no data were available, there is no reason to doubt that this material produces round reactions with reasonably clear-cut borders similar to those produced by other tuberculin.

(3) *Quantitative dose response.* No data relative to this were submitted, but there is no reason to believe that this material cannot be studied in this fashion, as is the case for other tuberculin.

(4) *Duration of reaction.* There is no reason to believe that reactions produced by this product do not follow a time sequence similar to those produced by other tuberculin.

(b) *Safety.*—(1) *Host response.* No specific information was submitted. However, there is no reason to believe that this product differs from other tuberculin in this respect.

(1) *Test material.*—(1) *Sterility.* The required tests are performed.

(2) *Purity.* No information was submitted, but the statement in the generic review probably applies to this product also.

(3) *Elimination by host.* No data were available.

(4) *Toxicity.* The standard safety tests are performed. In the past 10 years, over a million doses have been distributed without adverse reactions having been reported to the producer. The producer noted, when queried, that they have no evidence that acacia in their product has caused sensitization, although acacia is known to have this capability.

(ii) *Test method.* The test produces very little pain or bleeding and is essentially noninjurious.

4. *Recommendations.* (a) The Panel recommends that this product should be placed in Category IIIB, license to be suspended, because there are no data on standardization, sensitivity, specificity, and effectiveness in humans. Before the license is reinstated acceptable data based on scientifically sound methods should be submitted to demonstrate effectiveness in humans (Refs. 1 and 2). These data should include for each batch:

(1) Comparison of the product with the Tuberculin standard (PPD) by means of dose response curves in humans and animals.

(ii) Distribution of reactions in persons known to be infected and in those presumed to be uninfected with *M. tuberculosis* and other mycobacteria.

(iii) Chemical characterization (including protein, carbohydrate, lipid and nucleic acid).

In addition the manufacturer should provide evidence of stability of the material in the final container, i.e., possible adsorption to glass or plastic.

(b) *Labeling.* The following revisions should be made in the labeling:

(i) The manufacturer should delete any reference to treatment.

(ii) The manufacturer should use the latest American Thoracic Society recommendations for the interpretation of the skin test unless departures from these recommendations are justified.

(iii) The manufacturer should include a warning that the product should not be used in acacia (gum arabic) sensitive individuals.

#### TUBERCULIN, OLD BY INSTITUT MERIEUX

1. *Product.* Tuberculin, Old manufactured by Institut Merieux, Lyons, France, Distributed by Lincoln Laboratories, Inc., Decatur, Illinois, Brand Name "Mono-Vacc."

2. *Description.* Institut Merieux, Tuberculin, Old (Mono-Vacc) is used mainly as a screening test to evaluate delayed-type immunity to *Mycobacterium tuberculosis* and *M. bovis* infection (Ref. 1).

The Old Tuberculin (OT) for Mono-Vacc Test produced by Institut Merieux is packaged in sterile, plastic, disposable, multiple puncture devices. Each test dose is stated to be comparable to or greater than 5 tuberculin units (TU) administered by the Mantoux method. For the production of OT, three human isolates of *M. tuberculosis* (C, D, and PN) and one bovine isolate (Vallee) are cultured separately on a synthetic medium. At the end of the incubation the cultures are autoclaved and the filtrates harvested. Equal parts of the filtrates are pooled, glycerin is added and the pooled filtrates are concentrated. After control tests are performed, one or several lots of OT are mixed with glycerin to adjust the titer of the final antigen to 300,000 units/ml. This material, after sterility and safety testing, is placed in small plastic tubes which cover the spikes on applicators designed to fit over the thumbs of the testers.

3. *Analysis.*—(a) *Effectiveness.* The effectiveness of the Mono-Vacc OT skin test to measure the presence of immunologic experience with *M. tuberculosis* or *M. bovis* has been evaluated by many workers (Refs. 2 through 6, 8, 9, and 11). None of these studies was conducted in a randomized, blind fashion.

Two studies have compared the Mono-Vacc with PPD in bacteriologically confirmed cases of tuberculosis (Refs. 8 and 11). The PPD in the first study was a well-standardized product, 2 TU of RT-23 with Tween, which differs somewhat in its characteristics from PPD-S (Ref. 10). Of 69 patients, 68 had 2 or more mm of induration to the Mono-Vacc; 67 of these 68 also had reactions of 5 mm or more to RT-23. The second study found that all of 84 bacteriologically positive tuberculosis patients had at least 2 mm of induration to the Mono-Vacc (Ref. 11). These results indicate a high degree of sensitivity of the Mono-Vacc (98.6 percent).

The remainder of the studies gave values based on comparisons with another tuberculin test, and yielded figures for co-positivity and co-negativity rather than for sensitivity and specificity. Several studies submitted by the manufacturer did not compare the Mono-Vacc with PPD or RT and hence will be ignored. Among the remainder, only two used a PPD known to be well-standardized. The others either used an unspecified PPD or the old Parke-Davis tableted PPD. A summary of co-positivity and co-negativity from the literature (Refs. 2, 3, 4, 5, 8, 9, and 11) are given below:

Number of subjects		Percent Coproductivity	Percent Conjugativity
Positive	Negative		
270	1,127	98.2	96.5
57	1,872	100.0	96.2
26	1,167	98.8	91.6
60	1,962	100.0	99.0
10	218	96.4	85.1
28	112	98.6	81.0
50	14	100.0	0

Results of test with PPD; positive is 10 or more nodules induration.

These 4 tuberculosis patients had PPD reactions of 5 to 9 mm, and would be classified as positive by the American Thoracic Society standards.

The above studies were not done in areas with high frequencies of nontuberculous mycobacterial infections and hence undoubtedly overstate the connegativity of the Mono-Vacc. Moreover, there is ample evidence in the literature that batches of tuberculin may vary widely in potency. Following a direct request, the manufacturer did provide evidence of effectiveness in humans of the presently marketed product (Ref. 14). The manufacturer considers a positive reaction as the appearance of an indurated reaction of 1 mm or more.

#### CHARACTERISTICS OF EFFECTIVENESS

(1) *Test material*—(1) *Chemical composition*. The concentrated OT dispensed in the Mono-Vacc Test is not chemically defined. Assays of protein nitrogen were performed but the results were not reported to the panel.

(2) *Reproducibility from lot-to-lot*. Each lot of concentrated OT prepared for the Mono-Vacc Test is standardized by intracutaneous tests in hypersensitive guinea pigs, comparing the reactions with those produced by the standard OT. The potency of each lot is adjusted so that it has a titer of 300,000 units/ml plus or minus 20 percent. Dose response curves for batches k0008/1 and k0398/1 differ but not significantly.

(3) *Standardization*. The standardization of each lot is accomplished by injecting 0.5, 1, 2, and 4 TU of the U.S. Standard tuberculin (Bureau of Biologicals) intracutaneously by the Mantoux method into hypersensitive guinea pigs and comparing the degree of reactivity to four comparable levels of activity of the test lot.

It has been shown recently that the number of animals must be larger than the four required by regulations if the required accuracy is to be achieved (Ref. 7). Also there is evidence that the results in guinea pigs may not be directly transferable to man (Refs. 12 and 13) although there is no information on this point for this particular product.

(4) *Stability*. A comparison was made between recently manufactured Mono-Vacc Tests and Mono-Vacc Tests that were 15 months old in 34 subjects. There is no indication that the test sites were randomized or the readings made blind. Thirty-two of the 34 comparisons gave identical readings for each of the 2 tests, while the other 2 comparisons deviated by only 1 mm. Such close agreements are rarely, if ever, achieved when readings are done blindly. No further

tests of the stability of the finished product, i.e. OT on the Mono-Vacc spikes, were reported to the panel.

Four lots of OT tested against the U.S. Standard OT after 2 to 3 years of storage had potencies, according to the usual four-guinea-pig test, equal to or greater than the standard.

(5) *Sensitization*. Sensitization studies were performed on normal guinea pigs weighing about 400 g. Each animal received three successive 0.1 ml intracutaneous injections, at 7-day intervals, of OT diluted to 1/60 (5,000 units). Animals were challenged at 2 to 4 weeks with the same dose of OT, at which time their reactions were no larger than those produced in animals receiving their first injection.

(6) *Elimination by host*. No data were presented regarding elimination of the concentrated OT from the host.

(7) *Diluent*. Glycerin is employed as diluent for the concentrated OT in order to achieve a final potency titer of 300,000 units/ml plus or minus 20 percent. The sample must not contain more than 20 mg of glycerin in the 10 ml sample.

(ii) *Test method*—(1) *Application of test*. (a) The test requires pressing the Mono-Vacc spikes, on which a "drop" of concentrated OT is deposited, into the cleansed volar surface of the arm. The instrument is a plastic ring with a 9 mm square setting on which is mounted a 3 mm "stone" possessing nine spikes (2 mm long) arranged in three rows of three each at a distance of 0.75 mm from each other. The test procedure is extremely simple.

(b) The dosage injected is not controlled. The test relies on the ability of the nine spikes on the ringed instrument to penetrate the skin and deposit an unknown quantity of concentrated OT (300,000 units/ml).

(2) *Measurement of test*. (a) The positive reaction appears to be round.

(b) The producers states that "• • • light and local erythema is observed but the sole criterion for a positive reaction is palpable induration. The presence of palpable induration (even 1 to 2 mm) indicates a positive reaction."

(3) *Quantitative dose response*. The test is available in only one concentration of OT, 300,000 units/ml. There were no data submitted in reference to dose response as directly applicable to the Mono-Vacc Test.

(4) *Duration of reaction*. The instructions state that the reaction be read at 72 to 96 hours after administration of the test. A review of the literature reveals that many reactions from the Mono-Vacc Test have been read as early as 48 hours (Refs. 3, 4, and 6).

(b) *Safety*—(i) *Host response*. The Panel found no information on potential carcinogenic, teratogenic, or mutagenic effects from this product.

In highly sensitive subjects, severe local reactions can occur, with localized vesiculation and necrosis, occasionally accompanied by lymphangitis and lymphadenitis and mild constitutional reactions such as fever and malaise. In such in-

stances, scarring and change in pigmentation are possible. Pain on administration is minimal.

There is no reason to believe that this product differs significantly from other tests using OT.

(ii) *Test material*—(1) *Sterility*. Each bulk lot of concentrated OT is tested for sterility beyond the requirements of the Bureau of Biologicals.

(2) *Purity*. No tests are performed for purity, except as noted under "Toxicity."

(3) *Elimination by host*. No data were available.

(4) *Toxicity*. Experience with the test in humans suggests that the concentrated OT is nontoxic as used in the test. In the 5-year-period 1969-1973, many million Mono-Vacc Tests were distributed. The U.S. distributor has had no reports of adverse reactions. The plastic material for the Mono-Vacc applicator is checked for excess acidity and alkalinity, arsenic, tin, and heavy metals. Physiological saline which has been autoclaved with the plastic is also injected into mice to check for soluble toxic materials. The general safety tests are more extensive than required by Bureau of Biologicals regulations.

(iii) *Test method*. The test produces very little pain or bleeding and is essentially noninjurious.

4. *Recommendations*. (a) The Panel recommends this product should be placed in Category I because the present product has been demonstrated to be safe and effective.

(b) Since there is ample evidence in the literature that batches of tuberculin may vary widely in potency, it is necessary that each new batch be tested for potency (sensitivity) in infected humans. Potency tests in guinea pigs do not necessarily reflect potency in human beings. Since the test is to be used for screening purposes, then it is necessary to test only for sensitivity and not specificity. The Panel recommends sensitivity sufficient to elicit positive reactions in 100 percent of at least 50 persons who are known to have had bacteriologically confirmed tuberculosis and who are tuberculin positive as demonstrated by a simultaneous Mantoux test with 5 TU of PPD.

(c) Labeling changes should indicate that since this test is a screening procedure, positive Mono-Vacc reactions should be confirmed by a 5 TU Tuberculin, PPD Mantoux (intracutaneous) and possibly other diagnostic test procedures. It is not correct to imply that the test does not cause any pain or bleeding.

#### TUBERCULIN, PPD

##### GENERIC STATEMENT

Purified Protein Derivative of tuberculin (PPD) is a diagnostic skin test reagent prepared from a protein precipitate of filtrates of sterilized cultures of tubercle bacilli. It is used primarily to detect delayed hypersensitivity in individuals who have had immunologic experience with *Mycobacterium tuberculosis* and *Mycobacterium bovis*.

Tuberculin, PPD was originally produced by Seibert in 1934. Her lot 49608, produced in 1939, is the International and the United States Reference Standard and is designated PPD-S. The International and United States tuberculin unit is the activity contained in a specified weight of PPD-S: 1 TU=0.028 microgram (of which 0.008 microgram is sodium chloride). Commercial PPD products labeled 5 TU (the standard test dose) are standardized against PPD-S to achieve potency which is biologically equivalent to 5 TU of PPD-S dissolved in Seibert's phosphate buffer. Products labeled 1 TU and 250 TU are calculated dilutions based on the dosage determined to be 5 TU, not on clinical evaluation (biologic equivalency in humans).

A positive tuberculin test usually develops 2 to 10 weeks after initial infection with *M. tuberculosis* or *M. bovis*. PPD possesses excellent, although not perfect, ability to identify all individuals with this specific immunologic experience. Although sensitivity tends to persist throughout life, it may wane or dis-

appear in a variety of circumstances. When the usual causes for negative reactions are absent, failure to react to a tuberculin test is helpful in excluding the diagnosis of tuberculosis. Skin reactions to PPD may occur in individuals infected with mycobacteria other than *M. tuberculosis* or *M. bovis*.

Practically all of the valid data on sensitivity and specificity of PPD in the United States have been obtained from studies using the 5 TU dose. Increased sensitivity can be obtained by using higher dosage, but apparently only at the cost of decreased specificity.

Extensive investigation by increasingly sophisticated chemical and immunologic techniques has resulted in a wealth of information on the chemical composition of PPD. It is agreed that the major active principles are protein in nature. Potency can vary from batch to batch. Following batch standardization in human populations, it is possible to standardize PPD lots against PPD-S using an adequate number of sensitized guinea pigs.

Purified Protein Derivative is applied by the intracutaneous (Mantoux) or multiple puncture technique. The intracutaneous test is simple and accurate. The multiple puncture tests are simple but deliver a variable and undetermined quantity of test material in to the skin.

Purification Protein Derivative is stable for long periods under proper conditions of storage and has had widespread usage in millions of persons over many years, with great safety.

#### PRODUCT REVIEW

Purified Protein Derivative of tuberculin (PPD) is a protein precipitate obtained from filtrates of sterilized cultures of tubercle bacilli. It is used primarily as a diagnostic skin test reagent to detect delayed hypersensitivity in individuals who have had immunologic experience with *Mycobacterium tuberculosis* or *Mycobacterium bovis*.

Florence Seibert coined the term "purified protein derivative" in 1934. She made this product from heat concentrated synthetic medium (HCSM) Old Tuberculin by precipitating the protein with trichloroacetic acid. She later changed to precipitation with saturated ammonium sulfate to obtain a preparation with less nucleic acid and polysaccharide (Ref. 1). A large batch of PPD was produced by Seibert in 1939 to be used as a standard. This material was lot 49608 which was designated PPD-S (Ref. 2). It was adopted by the World Health Organization in 1951 as the International Standard for Purified Protein Derivative of Mammalian Tuberculin. It is the United States reference standard. The International Unit for PPD of Mammalian Tuberculin was defined in 1952 as the activity contained in a specified weight of the International Standard for PPD of Mammalian Tuberculin (Ref. 2).

Only dilutions of Seibert's lot 49608 can be called PPD-S. All other PPD's should be identified as PPD with lot number and producer. The standard test dose, 5 TU, refers to the equivalence of biological activity of a PPD preparation

with that contained in 5 TU of PPD-S dissolved in Seibert's phosphate buffer. When diluted in a buffered diluent, tuberculin protein is adsorbed in varying amounts to glass and plastic. Recently, small amounts of the detergent polysorbate 80 (Tween-80®) have been added to the diluent to reduce adsorption. Five TU of PPD with polysorbate 80 may contain a smaller quantity of protein than 5 TU of PPD-S (which does not contain detergent); however, the biological activity contained in 5 TU of the PPD with detergent, or any other PPD, must be, by definition, equivalent to the activity contained in 5 TU of PPD-S. Polysorbate 80 stabilized solutions of PPD labeled as 1 TU and 250 TU are available; however, these potencies are derived by calculation from the dosage determined to be 5 TU. Clinical evaluation (biologic equivalency in humans) has not been required.

Injection of Tuberculin, PPD into the skin produces a localized reaction in sensitized persons. Tuberculin, PPD is administered intracutaneously by the Mantoux method and by multiple puncture techniques. The reaction to injected PPD in sensitized individuals consists of an area of induration (usually with surrounding erythema) which varies in size and intensity according to the dosage of tuberculin and the sensitivity of the individual. Skin reactions to PPD may occur in individuals infected with mycobacteria other than *M. tuberculosis* and *M. bovis*.

A positive tuberculin test usually develops 2 to 10 weeks after initial infection with *M. tuberculosis* or *M. bovis*. Once acquired, sensitivity to tuberculin tends to persist throughout life. It may wane with advancing age or disappear if treatment of the infection is given in its earliest stages. Sensitivity may decrease or disappear temporarily during a variety of intercurrent illnesses, during treatment with adrenal corticosteroids, and in tuberculous patients who are very sick (Refs. 3 through 11). When the usual causes for negative reactions are excluded, failure to react to a tuberculin test is helpful in excluding the diagnosis of tuberculosis.

(a) *Effectiveness*. Practically all of the valid data in the United States on sensitivity and specificity of tuberculin have been obtained from studies using PPD bioequivalent to 5 TU of PPD-S. While there is a paucity of data relating to the sensitivity and specificity of the 250 TU strength, additional information may be inferred about concentrated PPD from studies employing 100 TU (Refs. 12 through 15). Apparently, increased sensitivity can be obtained only at the cost of decreased specificity (Ref. 16). Sensitivity and specificity of PPD may be affected by recently recognized problems of standardization: preparations found to be equivalent in guinea pigs may not be equivalent in humans (Refs. 17 through 19). The effectiveness may also be impaired by the known propensity of PPD to become absorbed to surfaces.

(1) *Sensitivity*. Tuberculin possesses excellent, although not perfect, ability to identify all individuals with specific

immunologic experience. Virtually all tuberculous patients will react to the intracutaneous injection of tuberculin if a sufficiently strong dose is used. A few patients will not react at all (Refs. 16, 20 through 22).

The intensity of the reaction may be diminished by many factors which affect delayed hypersensitivity reactions in a nonspecific manner by mechanisms not fully understood (Ref. 3). These factors or conditions include acute virus infections or vaccination with live virus vaccines; immunosuppression by disease, drugs, or steroid hormones; a state of general anergy such as that associated with sarcoidosis or malignancy, especially lymphoma; malnutrition, especially in children; overwhelming infection; and the waning of delayed hypersensitivity associated with advancing age (Refs. 4 through 11). In addition, there is a small proportion of individuals with tuberculosis who have none of the above conditions but who still do not react to ordinary doses of tuberculin. Although a recent publication suggests that this proportion may be as high as 20 percent (Ref. 23), observations over many years have documented that it is usually no more than 5 percent (occasionally up to 10 percent) with the use of intermediate strength tuberculin (5 TU), and 1 percent or less with high doses (100 to 250 TU) of tuberculin (Refs. 20 through 22, 24). In most patients who are very sick with tuberculosis, the tuberculin test, when previously negative, becomes positive after a few weeks of treatment.

(2) *Specificity.* Although the tuberculin test is very good for the recognition of tuberculous infection, infections with mycobacteria other than *M. tuberculosis* or *M. bovis* can cause reactions to tuberculin (Refs. 25 through 27). This not surprising since all mycobacteria and many nocardia species share antigens (Refs. 28 through 33). The specificity of the PPD test varies geographically according to the prevalence of these other infections, specificity generally being highest in the Arctic and at high altitudes and lowest in the tropics and at low elevations (Refs. 34 and 35).

Specificity is intimately related to the concentration of tuberculin used for the test. Furcolow et al. showed that most individuals, including infants, reacted to some doses of PPD when increasing amounts were given (Ref. 16). A larger proportion of persons will react to high-dose tuberculin than to low or intermediate dose tuberculin. Some of these individuals have been infected with *M. tuberculosis*, some with other species of mycobacteria, and some probably with other organisms that share antigens in the cell wall, such as nocardia and corynebacteria (Refs. 28 through 33). The main value of a high-dose tuberculin test is in a negative reaction, which makes a diagnosis of mycobacterial infection unlikely in the absence of the conditions listed above which diminish all delayed hypersensitivity reactions.

"Conversions" to positive tuberculin tests may sometimes result from the "booster" effect of a previous test (Refs.

36 through 39) and after blood transfusion from a tuberculin positive donor (Ref. 40). Conversion after blood transfusion presumably is due to the transfer of sensitized lymphocytes or their products. The tuberculin test has remained positive in a recipient for at least 8 months (Ref. 41). Reversion of a positive test to negative also has been documented (Refs. 42 through 44). This is most apt to occur when isoniazid treatment is given shortly after infection has occurred.

#### CHARACTERISTICS OF EFFECTIVENESS

(1) *Test material.*—(1) *Chemical composition.* Extensive investigation by increasingly sophisticated chemical and immunologic techniques has resulted in a wealth of information on the chemical composition of Tuberculin. PPD. It is agreed that the major active principles are protein in nature. Seibert found that PPD-S contained 1.2 percent nucleic acid and 5.9 percent polysaccharide (Ref. 45). She was able to isolate two distinct polysaccharide fractions (I and II) and three distinguishable protein fractions (A, B, and C) (Ref. 46). The A protein fraction demonstrated the slowest migration when studied by electrophoresis. While the mobility of the B and C protein fractions was approximately the same, their solubility properties were different. Protein A was more potent and possibly more specific than protein C in eliciting the tuberculin reaction in infected animals and human beings. Polysaccharide fraction I was a small molecule and polysaccharide fraction II was a large molecule. Neither of these polysaccharide fractions produced skin reactions in tuberculous animals or human beings. Daniel and Affronti (Ref. 47) recently have identified Seibert's three protein fractions in an immuno-electrophoretic system with the U.S.-Japan reference anti-serum. Also applying immunoelectrophoresis to whole PPD, (not PPD-S), Moulton et al. (Ref. 48) identified five components, of which only three appeared to be specific as identified by cross-sensitivity testing in guinea pigs. Protein was again implicated as the reactive component when treatment with pronase destroyed the antigenic reactivity of these three components. Daniel and Ferguson described two purified protein fractions which they called a and b, (Ref. 49), while Nagai and his co-workers described five relatively pure proteins each with a molecular weight of approximately 10,000 daltons (Ref. 50).

(2) *Reproducibility.* It has long been recognized that potency can vary from batch to batch. Seibert (Ref. 46), in evaluating the production of tuberculin, found that four different strains of tubercle bacilli yielded different relative amounts of polysaccharide fractions I and II and protein fractions A, B, and C. Further, different batches of tuberculin prepared from the same strains yielded different relative amounts of these five products.

Nagai et al. (Ref. 50) demonstrated that protein content of the culture filtrate increases with the age of the cul-

ture. Using disc gel analysis, their work showed that sharp protein filtrate fractions can be identified between the 3d and 5th week of culture growth, but thereafter protein modifications make identification more difficult.

(3) *Standardization.* Standardization in an animal model may not reflect the situation in other animals or humans (Refs. 17 through 19). However, following batch standardization in human populations (Ref. 51), it is possible to standardize PPD lots against the Reference Standard (PPD-S) using sensitized guinea pigs, provided an adequate number of animals is used and readings are made in a fashion that obviates reader bias (Refs. 52 and 53). Recently, a new method of comparing tuberculin preparations by using lymphocyte cultures has been described but not yet evaluated (Ref. 54).

(4) *Stability.* PPD is stable for long periods under proper conditions of storage. Inactivation by ultraviolet light and removal by adsorption to glass and plastic has been documented (Refs. 55 through 57). Loss of activity by adsorption has been diminished considerably by the addition of a wetting agent such as polysorbate 80 (Refs. 58 through 60).

(5) *Sensitization.* In the ordinarily used dosages, PPD has not been shown to induce a primary immunologic response. Tukey, DeFour and Seibert (Ref. 61) demonstrated that repeated injections of PPD given over periods of weeks and months to student nurses who failed to react to high dose PPD initially, did not produce positive skin reactions. Seibert reported (Ref. 62) that rabbits could be sensitized by repeated injections of 10 mg of PPD, whereas nine injections of 0.05 mg did not sensitize any of six normal guinea pigs.

It has not been demonstrated that PPD augments the immunologic response except in persons whose sensitivity has waned and is "boosted" by a tuberculin test (Refs. 36 through 39).

(6) *Elimination by host.* Although the clearance of PPD from the skin test site within 24 hours has been demonstrated in guinea pigs (Refs. 63 and 64), no data are available on its elimination from the human body.

(7) *Diluent.* The currently used diluents are not sensitizing. In animal and human studies performed at the World Health Organization Tuberculosis Research Office in Copenhagen, no sensitization could be induced by polysorbate 80 alone (Ref. 58).

(ii) *Test method.*—(1) *Application.* PPD is applied by the intracutaneous (Mantoux) or multiple puncture technique. The Mantoux test is simple and accurate. The multiple puncture tests are simple but deliver a variable and undetermined quantity of test material into the skin.

(2) *Measurement.* The reaction to these tests is a roughly circular area of induration, usually with clear-cut boundaries. The Mantoux test is easily readable by trained observers. The multiple puncture methods may result in one or

several small reactions which may coalesce to form a circular reaction.

(3) *Quantitative dose response.* The Mantoux method produces a range of reactions that is sufficient for dose-response studies. These studies are more difficult with the multiple puncture methods because of the discontinuous distribution of reaction sizes resulting from coalescence of multiple small reactions.

(4) *Duration of reaction.* In a study of reactions caused by PPD, it was found that mean induration size was relatively constant from 24 to 120 hours (Ref. 65).

(b) *Safety.*—(1) *Host response.* PPD has had widespread use in millions of persons over many years, with great safety. There is no evidence that it produces anaphylaxis; carcinogenic, teratogenic, or mutagenic effects; sensitization to the product; reactivation of tuberculosis; or interference with other medications. Infrequently, there may be a severe local skin reaction with vesiculation, pain, and tissue necrosis. Very severe reactions may be associated with constitutional symptoms of fever and malaise as well as lymphangitis and lymphadenitis, but such reactions are rare. Localized scarring and change in skin pigmentation may occur infrequently following severe reactions; however, very little residual scarring was noted from the reactions produced by inadvertent injection of 10,000 TU (Ref. 66).

(ii) *Test material.*—(1) *Sterility.* The method of preparation can be expected to kill all microbial agents. The standard sterility tests seem to be sufficient for this particular substance.

(2) *Purity.* It is highly unlikely that any dead microbial agents are present. No tests are done for non-microbial contaminants. Other contaminants are highly unlikely.

(3) *Elimination by host.* No data are available.

(4) *Toxicity.* There is no indication of toxicity when PPD is used intracutaneously in the usual dosages. Tuberculo-protein has been shown to have a low-grade intrinsic toxicity for non-sensitized animals. Seibert and Munday found that normal animals could be killed by the injection of PPD, but it required 50 times the amount lethal for infected animals (Ref. 67). The standard required safety tests should be sufficient to protect against the inadvertent introduction of toxic materials.

(iii) *Test method.* The intracutaneous Mantoux and multiple puncture methods of injection produce very little pain or bleeding, and are essentially non-injurious.

#### TUBERCULIN, PPD (DILUTED) APLISOL<sup>®</sup> BY PARKE-DAVIS

1. **Product.** Tuberculin, PPD (Diluted) APLISOL<sup>®</sup> manufactured by Parke, Davis and Co.

2. **Description.** The primary purpose of the Parke, Davis and Company Tuberculin, PPD product is to detect delayed hypersensitivity in individuals who have had immunologic experience with *Mycobacterium tuberculosis* and *Mycobacterium bovis*. The product is an aqueous solution of a purified protein derivative of tuberculin (PPD). It was prepared by the ammonium sulphate method of Seibert (Ref. 1) from culture filtrates of *M. tuberculosis*. The final solution is stabilized with polysorbate 80 (Tween-80<sup>®</sup>), is buffered with potassium and sodium phosphate (pH 7.3 plus or minus 0.1), contains about 0.35 percent phenol as a preservative, and is bioequivalent in potency to the standard PPD-S (5 TU/0.1 ml). The marketed product, injected by the Mantoux method, is ready for use without dilution. At the present time all production lots are prepared from a single, lyophilized Master "Batch" Rx 974777 which has been clinically standardized in order to "eliminate lot-to-lot variation."

Master Batch Rx 974777 was prepared from the culture filtrate of *M. tubercu-*

losis grown as mats or surface pellicles in Long's liquid synthetic medium (Ref. 2). At the end of incubation, the flasks were heated for 3 hours in flowing steam, the larger particles removed by filtration through coarse filter paper, and the various filtrates were pooled. Phenol was added to a final concentration of 0.5 percent and the filtrates passed through a Mandler candle or membrane filter. After tests for sterility, safety, and content of total protein nitrogen, carbohydrate, and nucleic acid, the filtrate was washed free of medium constituents "until chloride negative." The filtrate was then reduced in volume to a standard protein concentration. Saturated ammonium sulphate was added to the concentrated filtrate at pH 7.0 to 7.4. The resultant precipitate was recovered by centrifugation and dissolved in phosphate buffer, pH 7.2 to 7.6 followed by precipitation with ammonium sulphate and resolution in phosphate buffer. The final precipitate was dissolved in phosphate buffer pH 7.2 to 7.6 containing 0.5 percent phenol. This final solution was exhaustively washed by ultrafiltration with the phosphate buffer-phenol diluent until it was free of sulphate ions. Microkjeldahl nitrogen determinations were performed on the final solution and protein content was calculated on the basis of 16.3 percent nitrogen in PPD. The final solution was distributed into vials, lyophilized and stored at 4° C.

The Parke-Davis Tuberculin, PPD (bioequivalent to 5 TU PPD-S) is prepared from a concentrate of PPD made by reconstituting portions of the lyophilized Master Batch Rx 974777 in sodium and potassium phosphate buffered saline containing 0.0005 percent polysorbate 80 and approximately 0.35 percent phenol to make a predetermined fixed final volume on the basis of previous standardization. After sterilization by membrane filtration, the concentrate is assayed for total nitrogen (protein determined on the basis of 16.3 percent nitrogen in PPD), nucleic acid, and carbohydrate, and tested for sterility. Finally, the potency is estimated in guinea pigs (250,000 TU plus or minus 62,500 TU/ml). The final product is made by diluting this concentrate in the appropriate buffer to a predetermined, fixed volume and then subjecting it to the following assays: Phenol content, polysorbate content, sterility test, and potency test in guinea pigs. The bulk PPD diluted solution is then aseptically filled into presterilized vials and stoppered.

3. **Analysis.**—(a) **Effectiveness.** In their submitted material, Parke, Davis and Company report collated data from five well controlled studies in humans using Tuberculin, PPD diluted APLISOL and Tuberculin, PPD-S. The sensitivity and specificity of this product were shown to be identical with that of PPD-S.

There was little information specifically referring to the ability of this product to identify all individuals who have had immunologic experience with *M. tuberculosis*. Cross-reactions in guinea pigs do not occur between the Parke, Davis and Company Tuberculin, PPD

and coccidioidin, histoplasmin, or blastomycin.

#### CHARACTERISTICS OF EFFECTIVENESS

(1) **Test material.**—(1) **Composition.** The chemical composition of the immunologically active material is not defined. The product is characterized according to its nucleic acid, carbohydrate and nitrogen content. The diluent contains sodium and potassium phosphate, sodium chloride, polysorbate 80 and phenol. The pH of the buffered diluent is specified to be 7.3 plus or minus 0.1. All of the chemicals are reagent grade except for polysorbate 80 which is USP grade.

(2) **Reproducibility.** The Parke-Davis product is made from a single Master Batch Rx 974777 which should eliminate lot-to-lot variation with the exception of possible batch deterioration. In the company protocol 123-12 two "working concentrations", T4986 and T5664, were tested against each other and against PPD-S in well-controlled studies in humans. The two lots were found to be equally potent to each other and to PPD-S.

(3) **Standardization in laboratory systems.** The potency of Parke, Davis and Company Tuberculin, PPD is estimated in guinea pigs by comparing the skin test reaction of the lot under test with that of the U.S. Tuberculin, PPD-S standard. For the guinea pig potency tests each lot is compared with standard tuberculin in animals sensitized by the injection of the heat-killed strain *Jamaica 22 M. tuberculosis* in mineral oil. The prescribed test calls for at least four animals, each of which is tested with four different concentrations of the test material and standard. The potency is estimated by a "computer program." The guinea pig test is used for "in-house manufacturing control" only. The standard of acceptability for the final product consists of potency of 16 TU plus or minus 3.2 TU per 0.1 ml (20 percent variation). It is stated that results of replicate potency determinations on three consecutive production lots were submitted to the Bureau of Biologics.

(4) **Stability.** The manufacturer states "stability data on the first five lots of APLISOL are being provided to the Bureau of Biologics as the lots become available." While no data were submitted, it is stated that potency tests are performed on final container samples stored at 4, 22, 37, and 45° C over a period of at least 30 months. In clinical trials of lot stability performed on inmates of two different Michigan institutions (410 volunteers) with test preparations X-42432 (5 TU/0.1 ml 5 ppm polysorbate 80), X-42431 (5 TU/0.1 ml 15 ppm polysorbate 80), and T-5983 (5 TU/0.1 ml) the following were determined:

(a) The PPD potency was unchanged throughout the use life of stabilized 50 dose vials of their product.

(b) Polysorbate 80 at a concentration of 15 ppm was sufficient to maintain the potency in a secondary container (glass syringe) for at least 8 days.

(c) Two different "working concentrations" from the Master Batch contain-

ing 5 ppm polysorbate 80 were equipotent with 5 TU PPD-S in biological activity.

(d) A concentration of 5 ppm polysorbate 80 was insufficient to maintain potency of their product in a secondary container (glass syringe) for at least 8 days.

These conclusions were all drawn from Protocol 123-21 which was included in the material submitted by Parke, Davis and Company.

(5) **Sensitization.** Cross sensitization studies have been performed at Parke, Davis and Company using guinea pigs which have been sensitized with "Tuberculin, Histoplasmin, Blastomycin". In each instance, the homologous test antigen elicited responses equivalent to the homologous standard while the heterologous test antigen elicited little or no response. There appear to be no specific data with regard to sensitization of humans after repeated inoculations of their specific product.

(6) **Elimination by the host.** There were no data provided regarding elimination of this particular product by the host.

(7) **Diluent.** The diluent is checked for pH, conductivity, and phenol concentration. No reactions have been reported from the use of the diluent. Phenol, 0.35 percent, would appear to be non-sensitizing based on extensive clinical experience with many products into which it is incorporated. In animal studies performed at the World Health Organization Tuberculosis Research Office in Copenhagen (Ref. 3), employing guinea pigs and rabbits, no sensitization could be induced against polysorbate 80 or against the combination of polysorbate and tuberculin. Similar results were also obtained in man.

(8) **Test method.**—(1) **Application and dosage.** The application of the test (Mantoux method) is simple and accurate, involving the use of a tuberculin syringe and needle.

(2) **Quantitative dose response and duration of reaction.** The manufacturer suggests that reactions be read at 48 to 72 hours in man and at 18 to 24 hours in experimental guinea pig systems. No specific information was available in regard to a defined time course for reactions with this product. In clinical studies of the quantitative relationships between the Parke-Davis product and PPD-S skin test responses, the mean response increased as expected with increasing concentrations over a test dose range of three concentrations (1:3:9 with the middle dilution containing, based on preliminary clinical assay, a level of PPD approximately equal in potency to 5 TU of PPD-S). These data were presented in Protocols 123-9 and 123-10.

(3) **Safety.**—(i) **Host Response.** In clinical tests in over 1,700 volunteers in the Florida and Michigan areas to evaluate potency and stability of the product, no constitutional or anaphylactic reactions were reported. The manufacturer lists several million doses sold in the past years in 10 and 50 dose vials. They state since its introduction that "there have

been only three complaints of local reactions, three false positives and one false negative reported in letters and telephone calls from medical personnel." They further state that none of these reactions were serious. The validity of these complaints has never been established and the actual type of reactions was not presented. The Panel found no information on potential carcinogenic, teratogenic, or mutagenic effects from this product. As in any tuberculin test, severe skin reactions can occur occasionally with vesiculation and necrosis. In some of these, lymphangitis, lymphadenitis, and symptoms of malaise and fever may occur for a day or so. Rarely in severe reactions, scarring and changes in pigmentation may occur.

(ii) **Test material.**—(1) **Sterility.** The manufacturer states that Master Batch Rx 974777 has been tested for sterility and safety tests in guinea pigs at various stages in the processing procedure. These tests are conducted in a manner to comply with §§ 610.12 and 650.13(b) of the Federal regulations. There appear to be no routine tests performed for the presence of viral, mycoplasmal, or fungal contamination. It is highly unlikely that such contaminants would be present.

(2) **Purity.** Other contaminants are unlikely.

(3) **Elimination by host.** There was no information on product elimination by the host.

(4) **Toxicity.** This product appears to be nontoxic by human experience.

(iii) **Test method.** The test produces very little pain or bleeding and is essentially noninjurious. The small amount of polysorbate 80 detergent (5 ppm) added to the solution does not cause an irritant or painful response.

4. **Recommendations.** (a) The Panel recommends that this product should be placed in Category I, safe and effective. For future batches, the manufacturer should submit acceptable data based on scientifically sound methods to demonstrate effectiveness in humans (Ref. 4). These data should include for each batch:

(i) Comparison of the product with the standard by means of dose response curves.

(ii) Distribution of reaction sizes in persons known to be infected and in those presumed to be uninfected with *M. tuberculosis* and in addition in persons presumed to be infected with other mycobacteria.

(iii) Chemical characterization (including protein, carbohydrate, lipid and nucleic acid) should be performed on each batch to assess consistency of production.

(b) Furthermore, the Panel recommended no changes in the labeling.

#### TUBERCULIN, PPD, MULTIPLE PUNCTURE DEVICE (APLITEST) BY PARKE-DAVIS

1. *Product*. Tuberculin, PPD, Multiple Puncture Device (Aplitest) manufactured by Parke, Davis and Company.

2. *Description*. The Parke, Davis and Company multiple puncture device, Aplitest, is a "screening tool indicated to detect tuberculin-sensitive individuals." The manufacturer states (in the package insert) that the test unit has "been standardized by clinical studies in human subjects to give reactions equivalent to 5 TU of PPD-S administered intradermally in the Mantoux test" and labels the product "each device is clinically equivalent in potency to 5 TU administered intradermally."

Master Batch No. 975302 Tuberculin PPD used for the Aplitest was prepared from the D.T. strain of human tubercle bacilli. The organisms are inoculated into L-asparagine synthetic medium.

Flasks showing good growth are processed through a series of steps until the final precipitation with ammonium sulfate. The protein nitrogen content is determined. The final solution is then filled into vials, frozen and dried in a vacuum dryer at not more than 30° C.

Aplitest (tuberculin, PPD, concentrated) is a single-use multiple puncture device, consisting of a cylindrical plastic holder, open on one end with four stainless steel tines on the other end. The tines are coated with concentrated, dried PPD. The devices are designed so that the narrow tine-bearing end of each one fits into the hollow end of an adjacent unit, or into a protective cap. After the multiple puncture units are assembled, they are cleaned and degreased. The tines are machine-dipped in the PPD solution and then dried. The devices are machine-packed and this final product is sterilized.

3. *Analysis*—(a) *Effectiveness*. All reported studies on the sensitivity and specificity of this product used Lot No. X-42194 prepared from a lyophilized Master Batch No. 975302 PPD powder "which is reserved for all preparations of Tuberculin, PPD, Multiple Puncture Devices." Lot No. X-42194 was not intended for commercial distribution; subsequent lot preparations to be used in market sales depend upon "weighted mean potency" calculations arising from a 4 x 4 block comparison on 4 guinea pigs as described under the unit dealing with reproducibility.

Lot No. X-42194 was used in six studies conducted by the manufacturer. The device to be marketed (containing 0.2 micrograms of PPD/device) was tested for co-positivity and co-negativity with 5 TU of PPD-S given by the Mantoux technique on 1,686 persons, of whom 372 re-

acted to the standard Mantoux with 10 or more mm of induration. However, the manufacturer excluded the results of 603 tests, including 212 Mantoux reactors, on the grounds that the simultaneous administration of three multiple puncture tests and one Mantoux test (for a maximum possible dose of 75 TU) would somehow overload the host response mechanisms and thereby render the results invalid.

A summary report of the four studies considered by the manufacturer to be valid gives the combined results on 1,083 subjects at four locations in Michigan,

Population	Number	Percent of co-positivity	Percent of co-negativity	Percent of agreement <sup>1</sup>	Percent of false positives <sup>2</sup>
Summary of 4	1,083	97	82	79	52
Fort Myers, Fla.	238	99	82	81	68
Ypsilanti, Mich.	144	87	82	89	63
Pontiac, Mich.	219	99	85	84	19
Bahamas	282	92	81	73	78
Excluded by the manufacturer:					
Florida prisons	215	97	42	39	37
Do.	388	92	70	62	50

<sup>1</sup> Estimated by Yule's J statistic (ref. 1).

<sup>2</sup> Positive Aplitest and negative Mantoux among total persons positive to Aplitest.

In the package insert the manufacturer recommends following the American Thoracic Society guidelines on interpreting the skin test response to multiple puncture tests:

2 mm or more of induration without coalescence—Doubtful Reaction. Reactions of this size range reflect sensitivity that can result from infection with either atypical mycobacteria or *M. tuberculosis*; hence they are classified as doubtful. A standard Mantoux test should be done on all subjects in this group . . .

In all of the studies reported by the manufacturer, persons with vesiculation to the Aplitest had 10 mm or more of induration to 5 TU PPD by the Mantoux method.

Study No.	-14	14A	15	16	17	19	Totals
Mantoux positive (10 mm).	2.5	18.7	4	2	16	1	44.2
Tine vesiculation	2.5	19.0	4	2	16	1	44.5

Of the 200 persons with a coalescent reaction to the Aplitest but without vesiculation, 86 percent were positive (10 mm) PPD 5 TU Mantoux reactors.

Study No.	14	14A	15	16	17	19	Totals
Mantoux Positive (10 mm).	62.0	38.3	13.3	6.7	48.7	3.0	172
Tine coalescence	66.5	55.3	17.9	6.7	51.0	3.5	200

The manufacturer's package insert recommends that "vesiculation" or "coalescence of induration from two or more puncture points" be considered as "positive reaction—the test may be interpreted as positive and equivalent to a reaction of 10 mm or more of induration with PPD-S (5 TU) administered by Mantoux test."

#### CHARACTERISTICS OF EFFECTIVENESS

(1) *Test material*—(1) *Chemical composition*. The PPD for the Aplitest de-

Florida, and the Bahama Islands. The following table gives the results of these four studies, both combined, as in the summary report, and separately because there is reason to believe that combination in this instance is inappropriate. The table also gives results from the two sides excluded from the summary report. If a positive Aplitest result is defined as 2 or more mm of induration, and a positive Mantoux result as 10 or more mm of induration, the following summary statistics are obtained. In all cases, the averages of multiple readings were used.

Population	Number	Percent of co-positivity	Percent of co-negativity	Percent of agreement <sup>1</sup>	Percent of false positives <sup>2</sup>
Summary of 4	1,083	97	82	79	52
Fort Myers, Fla.	238	99	82	81	68
Ypsilanti, Mich.	144	87	82	89	63
Pontiac, Mich.	219	99	85	84	19
Bahamas	282	92	81	73	78
Excluded by the manufacturer:					
Florida prisons	215	97	42	39	37
Do.	388	92	70	62	50

was characterized only in general terms. It is analyzed for nitrogen, nucleic acid, and carbohydrate content. Chlorides and sulfates were removed in the course of preparation. The diluent for the final dipping solution contains sodium and potassium phosphates, sodium citrate, and phenol. Each device is estimated to contain 0.1 micrograms of phenol.

(2) *Reproducibility*. To date, only one lot (No. X-42194) of Aplitest devices with the current dosage has been prepared from the large Master Batch No. 975302. The manufacturer states that future lots for the Aplitest device will be prepared by dissolving a measured amount of PPD Batch No. 975302 in sterile buffered diluent containing approximately 0.5 percent phenol to a "pre-determined concentration"—apparently based on the weight/volume ratio found to be satisfactory for clinical use during the human studies with Lot No. X-42194 0.2 micrograms/device. A sample of this dip solution is assayed for guinea pig potency (4 sensitized guinea pigs) and must meet a standard of 125,000 plus or minus 62,500 TU/ml. Apparently, the tests are not applied in a blind or random manner and no precautions are taken to avoid reader bias.

The solution is stored at 2 to 8° C while this test is satisfactorily completed and then used for tine dipping.

(3) *Standardization*. The final product has apparently been standardized in guinea pigs. The manufacturer states that the tines from "at least 32 devices" are eluted in 2.0 cc of phosphate buffer. This provides "an eluate containing at least (sic) 40 TU per ml." "The eluate is assayed for potency in guinea pigs in accordance with Regulations." "Because the claimed potency has been shown to be clinically equivalent to 5 TU of PPD-S (Mantoux) by comparison of human response data the potency estimate is used as laboratory confirmation of potency.

The acceptance standard for Tuberculin, PPD, Aplitest prepared from Tuberculin PPD Master Lot No. 975302 is 2.5 TU (plus or minus 50 percent) per device in guinea pigs."

It should be emphasized that the term TU is used as a potency estimate for each tuberculin produced by the manufacturer and serves only as a measurement factor in comparing a product to 5 TU PPD-S. With regard to this product the manufacturer states that 0.2 micrograms of PPD Batch number 975302 produces a reaction comparable to 5 TU PPD-S (Mantoux).

In addition to the clinical trials of Aplitest devices noted under "Effectiveness," lot No. X-42194 has been standardized in the guinea pig against "U.S. Standard PPD No. 76."

To prepare dip solution Lot X-42194, a solution was used that had an actual potency of 2.7 mg of PPD, or 135,000 TU, per ml. Potency tests on the final product were made by clipping the tips from 30 devices and eluting them in 2 ml of phosphate buffer. The resulting solution should contain 40 TU per ml. This material was used to skin test 4 sensitized guinea pigs and the reactions were compared with those produced by 40 TU per ml of U.S. Standard PPD No. 76 using 4 dilutions of each preparation. The estimated potency for this lot was 2.52 TU per device. Thus, 2.5 TU/device is the manufacturer's standard for future lot productions from Master Batch No. 975302.

Apparently the guinea pig skin tests were not applied in a blind or random manner and no precautions were taken to avoid reader bias.

(4) *Stability*. Dip solution Lot No. X-42194 studied by the guinea pig potency test was found to be stable for 15 months when stored at 20 to 25° C.

Comparisons of human tests of the currently used lot (X-42194) with 5 TU of PPD-S over an 11-month period have given no indication of any change in potency. However, the number of reactors in these tests is too small to detect any but gross changes. It seems likely that dried concentrated PPD will be stable. The manufacturer recommends that it be kept below 30° C (86° F).

(5) *Sensitization*. No specific data were given regarding the induction or augmentation of immunologic response from this material. Principles described in generic review should apply to this product.

(6) *Elimination by host*. No data were provided.

(7) *Diluent*. The product is administered in the dried state.

(i) *Test method*—(1) *Application*. When a test is to be given, the tines are exposed by removing a protective cap or an adjacent device. The tines are then applied firmly to the cleansed taut skin (usually of the volar surface of the forearm) for approximately one second. The amount of tuberculin deposited in the skin has not been determined and probably cannot be controlled except within broad limits.

(2) *Measurement of test*. The manufacturer recommends that the reactions

be read in 48 to 72 hours by measuring the diameter of the largest area of induration. The induration produced has a reasonably clear-cut boundary. On the basis of limited experience the manufacturer advises that reactions showing either vesiculation or coalescence be considered as positive without rechecking with a standard Mantoux tuberculin test.

(3) *Quantitative dose response*. The manufacturer's submitted study protocol 123-14 allowed a comparison of the reactions to tine devices carrying 0.2, 0.4, and 0.8 micrograms of PPD per device. An analysis of these data provides the following comparisons:

	0.2 mcg versus PPD-S	0.4 mcg versus PPD-S	0.8 mcg versus PPD-S
Correlation coefficient	0.67	0.66	0.64
S.E. correlation coefficient	.04	.04	.03
Slope of regression line	.53	.52	.51
S.E. slope	.02	.04	.03
Percent vesiculation	1.2	2.6	3.7
S.E. percent	.74	1.1	1.3

There are no significant differences between any of the correlation coefficients, slopes, or percentages with vesicular reactions. The calculations for correlation coefficients and slopes are based on the data as grouped by the manufacturer. Arbitrary values are assigned to each category: 0, 1, and 2 are used for the PPD-S categories and 0, 1, 2, and 3 for the Aplitest categories. While this procedure clearly introduces errors, they should be essentially the same for each of the three tables and hence cancel out when comparing correlation coefficients or regression lines. The data indicate that when products employ high concentrations of tuberculin, exact dosage seems to matter very little, a four-fold increase in the PPD concentration of this product causing no demonstrable difference in reactions.

(4) *Duration of reaction*. No data were provided.

(b) *Safety*—(i) *Host response*. There is no reason to suspect that this product would differ from other tuberculin with regard to anaphylaxis, carcinogenic effects, teratogenic effects, mutagenic effects, sensitization to product, reactivation of disease or interference with the action of other medications. In reviewing the data provided by the manufacturer, among 372 reactors to the standard Mantoux test, there were 46 persons who had vesicular reactions to the Aplitest. No other data were given regarding long- or short-term complications, except that the reported studies on 1,675 persons mention no complications, implying thereby that none occurred.

(ii) *Test material*—(1) *Sterility*. After initial filtration, the batch is tested for the presence of living tubercle bacilli by injecting 1 ml into each of four guinea pigs. At least three must live for 6 weeks and none can show evidence of tuberculosis at necropsy.

The manufacturer states that it intends to prepare a sterile stock PPD solution (lot) and remove a separate aliquot for each day's use, discarding the unused portion. The portion used for the day's

dipping is kept at 5° C during the process and is preserved with approximately 0.5 percent phenol. The dipped tines are terminally sterilized using ethylene oxide. The dip test solution used each day is tested for sterility.

The required sterility tests on the final product are accomplished by removing the metal tine rings from the plastic handles of 20 Aplitest devices. Each ring is added to a tube of fluid thioglycollate medium. Twenty additional rings are similarly incubated in tubes of soybean-casein digest medium. It is not likely that there would be contamination with viral, mycoplasma or fungal agents.

(2) *Purity*. No data were provided except that only 0.1 mcg of phenol is calculated to be present on a single device. Other contaminants are unlikely.

(3) *Elimination by host*. No data were provided.

(4) *Toxicity*. No mention was made of any toxic effects noted during the testing of approximately 2,000 persons of all ages.

The standard safety tests in two guinea pigs and two mice are performed with the material eluted from 12 devices in 12 ml of saline. Five ml of this solution is injected subcutaneously (sic) into each of two guinea pigs. Each of two adult mice is inoculated subcutaneously (sic) with 0.5 ml of the eluate.

NOTE—The recommended parenteral route is now an intraperitoneal injection. The animals are then observed for 7 days for "freedom from significant signs or death."

(iii) *Test method*. The test produces minimal momentary pain. Although 90 of 394 subjects had bleeding after being tested, this occurred at the site of only one tine puncture in 75 subjects. The test is essentially noninjurious.

4. *Recommendations*. The Panel recommends that this product should be placed in Category I because the present product has been demonstrated to be safe and effective. Since there is ample evidence in the literature (see the Generic Statement) that batches of tuberculin may vary widely in potency, it is necessary that each new batch be tested for potency (sensitivity) in infected humans. Potency tests in guinea pigs do not necessarily reflect potency in human beings. Since the test is to be used for screening purposes, it is necessary to test only for sensitivity and not specificity. The Panel recommends that sensitivity be sufficient to elicit positive reactions in at least 50 persons who are known to have had bacteriologically confirmed tuberculosis and who are tuberculin positive as demonstrated by a simultaneous Mantoux test with 5 TU of PPD.

(a) *Quality control*. Because of the possibility that the mechanical dipping process may occasionally fail to deposit tuberculin on the tines of an individual unit, routine testing of the product should include a test for protein or other test material on the tines of randomly selected individual units.

(b) *Labeling*. (1) Delete references implying equivalent significance of reactions to this product and to those of 5

TU of Tuberculin, PPD by the Mantoux (intracutaneous) method.

(ii) Statements of the interpretation of the test should be consistent with the current guidelines published by the American Thoracic Society (because the company's data do not adequately demonstrate that coalescence is equivalent to a positive test with 5 TU of Tuberculin, PPD by the Mantoux method).

(c) Advertising. (i) Delete statement suggesting that PPD as used in this device is more specific than Old Tuberculin.

(ii) Delete "Provides savings in time, effort and money by elimination of retesting."

#### TUBERCULIN, PPD (MANTOUX) BY CONNAUGHT

1. *Product*. Tuberculin, PPD (Mantoux) manufactured by Connaught Laboratories Ltd.

2. *Description*. The primary purpose of the Connaught Laboratories Ltd. Tuberculin, Purified Protein product is to detect delayed hypersensitivity in individuals who have had immunologic experience with *Mycobacterium tuberculosis* or *Mycobacterium bovis*.

The Connaught product was purified by precipitation from the culture filtrate derived from the L-asparagine medium on which the strain "Johnston" of *M. tuberculosis* had grown as a surface pellicle. The stock concentrate was dissolved in phosphate buffered saline containing 0.5 percent phenol. The potency of this stock concentrate was checked in eight suitably sensitized guinea pigs using two dose levels of test material and PPD-S. A large batch was produced in order to minimize lot-to-lot variation. This Master Batch CT68 was made from 10 individual lots of stock concentrate which were selected and pooled. The final product, diluted in phosphate buffered saline containing 0.3 percent phenol as a preservative and 5 ppm polysorbate-80 (Tween-80R) as a stabilizer, is marketed in three strengths, 1 TU, 5 TU, and 250 TU.

3. *Analysis*.—(a) *Effectiveness*.—(i) *Sensitivity*. Connaught CT68 identifies tuberculous infected individuals as well as PPD-S does. This was demonstrated conclusively in studies under the direction of Dr. G. Wijsmuller in which batch CT68 was compared with the Center for Disease Control standard PPD-S in adequate numbers of humans.

(ii) *Specificity*. (See the discussion in the Tuberculin, PPD, Generic Statement.) It is not unreasonable to assume that batch CT68 also will show cross reactions in individuals who have been infected with other mycobacteria. One study by Dr. Wijsmuller in guinea pigs tends to confirm this assumption. In addition, in an identity test performed on one vial of the final container of each lot, the material must produce no reaction in a normal guinea pig, and a larger reaction in a guinea pig sensitized with

*M. tuberculosis* than in a guinea pig sensitized with *M. avium-intracellulare*. Reactions are compared with those produced by standard PPD.

#### CHARACTERISTICS OF EFFECTIVENESS

(i) *Test material*.—(1) *Chemical composition*. The product is the 2 percent trichloroacetic acid precipitable fraction of a pooled lot of culture filtrate. The nucleic acid content is approximately 5 percent. The only other information on the chemical composition is the nitrogen content as measured by the Kjeldahl method. From this analysis it is calculated that the material contains 0.15 mg of protein per ml, or 0.91 plus or minus 0.02 mg protein per mg of PPD-CT68.

(2) *Reproducibility from lot-to-lot*. The Master Batch of CT68 is stored as a dry powder in a desiccator at 5° C. A new lot apparently is prepared each year. Since the dried material has remained stable under the conditions of storage, each lot should be as uniform as it is possible to make a biological product. The protein nitrogen content of each lot is checked to assure conformation within the allowable limits described in the preceding section.

(3) *Standardization*. The Master Batch CT 68 has been compared exhaustively with PPD-S in humans with and without demonstrable disease. It was demonstrated that batch CT68 had about twice the antigenic potency of PPD-S. For this reason 2.5 working units (WU) of batch CT68 dispensed in phosphate buffered saline, pH 7.38, containing 5 ppm polysorbate 80 was estimated to be bioequivalent to 5 TU of PPD-S. There are 50,000 WU in 1 mg of PPD-CT68.

Each year a stock solution of batch CT68 (also called a "house standard") is prepared as a solution of 1 mg per ml and checked for proper nitrogen content. PPD-S is obtained from the Bureau of Biologics at similar intervals. The potency of the stock solution is compared to the Bureau of Biologics standard in 16 guinea pigs sensitized with heat-killed BCG. The stock solutions are considered to be acceptable if the results show its potency to be within 20 percent of the standard.

Bioequivalency to PPD-S is assumed for the 5 TU material on the basis of the guinea pig potency test. The 1 TU and 250 TU strengths are made by appropriate dilutions of the stock material. They are therefore calculated potencies and not actually bioequivalent to a standard. This would seem to be an acceptable compromise, however, since there are no reference standards for 1 TU and 250 TU PPD.

(4) *Stability*. The expiration date of the final product is stated to be 1 year from the date of manufacture. Data were submitted in the form of a publication by Landi in 1963 to indicate that the lyophilized material is stable for at least 24 months at temperatures of 5°, 24°, and 37° C. For this test, 2 ml of solutions of PPD in phosphate buffered saline with an inert base, polyvinylpyrrolidone, in concentrations of 1,000 TU and 50 TU per

ml, were freeze dried in 10-ml vials. In the same paper it was shown that stock solutions were stable for 18 months at 5° and 24° C in concentrations of 10, 50, and 1,000 TU per ml dissolved in buffer containing 50 PPM of polysorbate 80. The test solutions were compared with dilutions of a reference standard at 50,000 TU per ml kept at 5° C, and the potency tests were performed in sensitized guinea pigs.

On the other hand, data were submitted which show that freshly prepared antigen in a diluent containing 5 ppm of polysorbate 80 produces a slightly larger reaction in hypersensitive guinea pigs than does an equivalent antigen 3 weeks old. Also, there are definite indications that 5 ppm of polysorbate-80 does not protect as well as 50 ppm in preventing the loss of potency owing to the adsorption of active protein to glass or plastic surfaces. Interpretation of the role of polysorbate-80 is complicated by the observations of Wijsmuller and others of an in vivo effect of this material which makes for a qualitative as well as a quantitative change in the skin reaction.

(5) *Sensitization*. No data were submitted regarding induction or augmentation of immune response as a result of skin testing with batch CT68. It is reasonable to assume, however, that the discussion of this subject in the Generic Statement of PPD would apply equally well to this product.

(6) *Elimination by host*. Clearance from the skin test site within 24 hours has been demonstrated in guinea pigs. (Ref. 1). No data were available for humans.

(7) *Diluent*. The diluent is phosphate buffered saline, pH 7.38, containing 0.3 percent phenol as a preservative, and 0.0005 percent (5 ppm) polysorbate 80 as a stabilizing agent.

(ii) *Test method*.—(1) *Application of test*. The Mantoux method is employed, which requires an intracutaneous injection of 0.1 ml of the material usually into the volar surface of the arm. It is a simple procedure, and it is accurate provided adequately calibrated syringes are used.

(2) *Measurement of test*. The positive reaction is round, indurated, and usually has a distinct border.

(3) *Quantitative dose response*. (see discussion under PPD Generic Statement). Data were submitted for CT68 to show that there is a quantitative dose response which is linear over a small range of concentrations, in strengths of 1 to 5 TU.

(4) *Duration of reaction*. The test is read at 48 to 72 hours at which time the maximum reaction size usually has been attained.

(b) *Safety*.—(i) *Host response*. No adverse reactions were reported to the manufacturer after many millions test doses had been distributed. The only one of the listed reactions which is generally recognized is the rare severe skin reaction in a highly sensitive individual. The Panel found no information concerning potential carcinogenic, teratogenic or mutagenic effects from this product.

(ii) *Test material*. The bulk and final products are tested for sterility according to the Food and Drug Administration standards. These test methods indicate the absence of bacteria and fungi, and it is not likely that the material would contain other living agents. The absence of viable mycobacteria is assured by culture and guinea pig inoculation of the bulk concentrate. The standard safety tests according to FDA regulations are performed. There are no other tests for nonliving contaminants. A very large human experience indicates that the material is nontoxic.

(iii) *Test method*. The test produces very little pain or bleeding and is essentially noninjurious.

4. *Recommendations*. (a) The Panel recommends that this product should be placed in Category I, safe and effective. For future batches, the manufacturer should submit acceptable data based on scientifically sound methods to demonstrate effectiveness in humans (Ref. 2). These data should include for each batch:

(i) Comparison of the product with the standard by means of dose response curves.

(ii) Distribution of reaction sizes in persons known to be infected and in those presumed to be uninfected with *M. tuberculosis* and in addition in persons presumed to be infected with other mycobacteria.

(iii) Chemical characterization (including protein, carbohydrate, lipid and nucleic acid) should be performed on each batch to assess consistency of production.

(b) The labeling should indicate that the product is not stable in secondary containers (such as in a syringe). In the phrase "If a second test is employed, it should be repeated on the other forearm preferably one month following the first test" the last seven words should be deleted from the labeling. Consider replacing the term "atypical" with "other species of mycobacteria."

#### TUBERCULIN, PPD, MULTIPLE PUNCTURE DEVICE (HEAF) BY CONNAUGHT

1. *Product*. Tuberculin, PPD, Multiple Puncture Device (Heaf) manufactured by Connaught Laboratories, Ltd.

2. *Description*. The primary purpose of the Connaught multiple puncture Tuberculin, Purified Protein Derivative (PPD) device is to identify those individuals who have had an immunological experience with *Mycobacterium tuberculosis* or *Mycobacterium bovis* in a manner that can be applied by nonmedical personnel.

The Connaught product is a concentrated preparation of PPD containing 100,000 tuberculin units per ml. It is

precipitated from tuberculin prepared in Long's synthetic medium in which the "Johnston" strain of *M. tuberculosis* is cultivated at 37° for 6 weeks in Povitsky bottles prior to steaming for 3 hours and filtration. The filtrate (tuberculin) is precipitated with 40 percent trichloroacetic acid; this precipitate is dissolved and centrifuged to remove particulate matter and adjusted in volume to ¼ that of the original with M6 phosphate buffer. Phenol is added to a final concentration of 0.5 percent. This is the stock dilution of PPD. The final product is prepared from this solution and contains protein (estimated from the nitrogen and nucleic acid content) equivalent to 2 mg/ml Standard Tuberculin PPD.

The solution of PPD is applied with a sterile toothpick or platinum loop directly to the surface of the skin in a circular area approximately 10 mm in diameter. It is "injected" into the skin with a special instrument referred to as a "Sterneedle," with a controlled depth penetration by its six retractable points.

3. *Analysis*.—(a) *Effectiveness*. Some data comparing the Heaf PPD to Mantoux tests suggest that the Heaf multiple puncture system can be as sensitive as the Mantoux test. In 155 tuberculosis patients, 95 percent were Heaf positive (Ref. 1). Other reports also indicate a high degree of co-positivity (Refs. 2 and 3). The degree of co-negativity in populations with a high prevalence of nontuberculous mycobacterial infections however, appears to be low (Ref. 4). Two studies suggest that the Heaf test is intermediate in strength to Mantoux tests using 5 TU and 250 TP (Refs. 3 and 5). The test sites were not randomized and the tests were not read blindly in any of the above studies.

(i) *Test material*.—(1) *Chemical composition*. The protein, nucleic acid, glycerol, dibasic sodium phosphate and phenol content of the product are known. The exact chemical nature of the trichloroacetic acid precipitated material is unknown.

(2) *Reproducibility*. No data were given.

(3) *Standardization*. Standardization is carried out against International Standard PPD-S in eight guinea pigs sensitized with BCG (fresh, freeze-dried or heat-killed) in 50 percent Freund's adjuvant. The number is in excess of that required by FDA regulations but is now known to be inadequate for the precision required (Ref. 6). The reaction sites are randomized but it is not known whether the reactions are read blindly. Evidence exists indicating that standardization in guinea pigs may not correlate with standardization in man (Ref. 7). However, the Connaught Heaf antigen is considered to be of acceptable potency if statistical analysis of the test guinea pig results show that the PPD content lies between 80,000 to 120,000 TU/ml, and when the micro-Kjeldahl test shows the concentration of protein to be equivalent to 2 mg/ml International Standard Tuberculin PPD.

(4) *Stability*. The material is relatively stable. Material stored at 5° C showed no detectable loss of potency after 24 months. There was slight loss of potency by 12 months in antigens stored at room temperature and at 37° C (Ref. 8).

(5) *Sensitization*. No data were provided.

(6) *Elimination by host*. No data were provided.

(7) *Diluent*. No diluent is used. The material itself is preserved in phenol which is not known to be sensitizing.

(ii) *Test method*.—(1) *Application*. (a) No applicators are supplied with the Heaf material. It is applied to the skin by sterile toothpicks or flamed platinum loops, or by dipping the device in a small amount of the tuberculin. The "Sterneedle" is relatively simple to use although some persons find the manipulation of the unit, especially loading new disposable heads, more difficult than filling syringes, but the administration of the test is much simpler than the Mantoux test.

(b) As in other multiple puncture tests, the dosage of tuberculin cannot be measured. The risks vary from applying the tuberculin unevenly to applying none at all, especially with the cap-dip method recommended for large scale screening.

(2) *Measurement of the test reaction*. (a) The reaction is said to last 7 days. It is recommended that the reactions be read on the 4th and 7th days. The reactions generally progress from small papules at each of the six puncture points to coalesce and form a ring of solid circular induration. Of 7,628 individuals tested with the Sterneedle and Connaught PPD, 65.5 percent of the reactions appeared by the 3d day, 75.7 percent by the 5th, and 96.7 percent by the 7th (Ref. 11).

(b) The boundaries of the reaction are clear cut.

(3) *Quantitative dose response*. Quantitative dose response studies are not possible. Because of coalescence, the distribution of reaction sizes shows a break in continuity. Moreover, the dosage cannot be controlled.

(4) *Duration of reaction*. As noted above, the reaction lasts at least 7 days. Hsu believes that reactions that appear at 5 days or later are likely to be non-specific (Ref. 9). Katz noted at least four nodules at 2 to 7 days (Ref. 4).

(b) *Safety*.—(i) *Host response*. No adverse reactions have been reported from the many thousand vials that have been sold. The Panel found no information concerning potential carcinogenic, teratogenic or mutagenic effects from this product. However, one could anticipate that severe local reactions would be produced similarly to those resulting from the Sterneedle using Weybridge PPD. Of 2,284 positive reactions with this antigen administered by the Sterneedle, 264 (9.3 percent) were classified as severe. A total of 249 were characterized by vesiculation, blistering, ulceration or scabbing; 7 by intracutaneous hemorrhage; 4 by lymphangitis; and 4 by a severe reaction of unspecified nature. One case with constitutional symptoms was also noted (Ref.

10). There is also a study among tuberculosis children suggesting that necrosis is less frequent with the Stern needle than with PPD applied by the Mantoux test (Ref. 4).

(ii) *Test material*—(1) *Sterility*—(a) *Bacterial*. The PPD concentrate is cultured for viable *M. tuberculosis* and is injected into guinea pigs. Cultures for other bacteria (aerobic and anaerobic) are done on the seed cultures, the filtrate, PPD concentrates, the final bulk concentrate, and contents of the final containers.

(b) *Other micro-organisms*. No tests are done for viruses, mycoplasma or fungi. It is highly unlikely that this material would contain other contaminants.

(2) *Purity*. Freedom from nonprotein contaminants is implied by its precipitation by trichloroacetic acid. However, nucleic acid(s) would also be precipitated by this chemical and can be expected to be present in this product. No other data were provided.

(3) *Elimination by host*. No data provided.

(4) *Toxicity*. Following the distribution of many thousand vials containing 150 to 200 doses each over the past 5 years, no adverse reactions were reported except occasional severe "local" reactions. Animal tests in mice and guinea pigs performed with the final product as required by present FDA regulations also indicate that the product is not toxic.

(iii) *Test method*. The test produces very little pain or bleeding and is essentially noninjurious.

4. *Recommendations*. The Panel recommends that this product should be placed in Category IIIA, (to remain on the market pending more data), because adequate evidence of effectiveness of the present product in humans was not submitted. Since there is ample evidence in the literature (see the Generic Statement) that batches of tuberculin may vary widely in potency, it is necessary that each new batch be tested for potency (sensitivity) in infected humans. Potency tests in guinea pigs do not necessarily reflect potency in human beings. Since this test is to be used for screening purposes, then it is necessary to test only for sensitivity and not specificity. The Panel recommends that sensitivity be sufficient to elicit positive reactions in 100 percent of at least 50 persons who are known to have had bacteriologically confirmed tuberculosis and who are tuberculin positive as demonstrated by a simultaneous Mantoux test with 5 TU of PPD. One year is a reasonable time for the recommended testing to be accomplished.

#### RECOMMENDATIONS FOR REGULATIONS ON POTENCY, SAFETY, STERILITY, PURITY, AND EXPIRATION DATING

The following Panel statements concern Part 610 of Title 21 of the Code of Federal Regulations as it pertains to the following products reviewed by the Panel:

Coccidioidin  
Histoplasmin  
Tuberculin, Old  
Tuberculin, PPD  
Diphtheria Toxin for Schick Test  
Schick Test Control  
Lymphogranuloma Venereum Antigen  
Mumps Skin Test Antigen  
Trichinella Antigen

#### POTENCY

Section 610.10 contains the general statement defining the requirements for potency and refers to § 600.3(s) of the same chapter for the definition of the term potency.

At the present time specific requirements are defined for Tuberculin and Diphtheria Toxin for Schick test. It is recommended that specific requirements be defined for each of the other products. Further the Panel recommends the development of a subsection on standardization of skin test products in animal models (Refs. 1 and 2). These procedures should be applied to each new batch.

#### GENERAL SAFETY

A proposed revision of § 610.11 is currently under review by the Food and Drug Administration. This expanded version details specific headings and clarifies various conditions for general safety that must be taken under con-

sideration. This section is intended to deal directly with the question of general safety to ensure that the product does not contain extraneous toxic substances and for that reason defines the in vivo systems which must be employed.

The general safety test is a nonspecific test designed to rule out the possibility that some error has allowed a toxic material to be added to the product. Its only purpose is to provide additional assurance that no seriously harmful mistakes have been made in the preparation of a biological product up to and including the final preparation, dilution and bottling. It should be kept in mind that this is a general safety test, something to be applied to all final products in addition to tests for specific harmful effects, regardless of the nature of the product or the type of material used in its preparation. At the present state of the art, it is literally impossible to test the final product for all conceivable harmful effects.

Looked at in this light, the proposed general safety test seems adequate. A total of four animals representing two species is used in the first test. Truly heroic doses are given each animal. The dose of final product given a 22-gm mouse is equivalent to 1.136 ml for a 50 kg person; the dose given a 400 gm guinea pig is equivalent to 625 ml for a 50 kg person. In the toxicity tests for multiple puncture devices using dried tuberculin, the test doses are equivalent to giving a 50 kg person the material contained on 625 devices for a 400 gm guinea pig and 1.136 devices for a 22-gm mouse. Even slightly toxic additions to the product, given in such huge doses, can reasonably be expected to cause an animal to lose weight, sicken, or die.

Allowing repeat tests in case a failure occurs in the first, or first and second tests, is entirely reasonable. Death and illness among animals kept in large colonies not infrequently result from intercurrent disease, and the injection of completely harmless material in huge doses may be expected to affect some animals adversely. It should be noted that in case of failure to pass the first and second tests, the product must be given to a total of eight animals in the third test, all of which must remain healthy and not lose weight if the product is to be passed.

#### STERILITY

Section 610.12 is the most detailed of the four sections to be covered by the panel. For its intended purpose, the section appears to be faulty in several respects. Three of the products under review are derived directly from animal sources and could harbor agents which under certain undefined conditions might have an undesirable effect on the individual receiving the product. Unless details are available elsewhere, the onus is on this panel to evaluate the necessity of having additional standards established for the production of each of the skin test antigens that are being scrutinized. In the case of histoplasmin,

coccidioidin, tuberculin-OT, tuberculin-PPD and diphtheria toxin, we are dealing with reagents which are cell free extracts of organisms. Section 610.12 adequately covers the requirements for sterility of each of these products. Lymphogranuloma venereum antigen, mumps virus antigen and Trichinella extract, on the other hand, are derived from animal sources. It is presumed that the end products have all been inactivated by various procedures but the regulations of the Bureau of Biologics do not stipulate specific tests which would ensure sterility including freedom from mycoplasma and viruses. For example, it is suggested that antigens requiring embryonated chicken's eggs for their production be checked to ensure that they are obtained from flocks that are free of avian leukosis virus, Rous inhibitory factor (Rif), and *Salmonella pullorum*.

It is recommended that specific requirements be defined for each product.

#### PURITY

This topic is most difficult to define. If strict adherence is applied to the phrase "free from extraneous material," none of these skin test antigens meets the § 610.13 requirement. The regulations for each specific type of product need to define extraneous material as stringently as possible with the current state of the art.

In § 610.13(b) specific exceptions are allowed for bacterial, viral and rickettsial antigens and for toxins in the test for pyrogenic substances. The Panel recommends that fungal antigens also be included in this category.

In summary, this section of the regulations requires clarification, and the recommendation is made that it be revised.

#### STANDARD PREPARATIONS

The availability of § 610.20 Reference Standards at the national level is basic to the continued production of effective quality preparations for general use. It is reasonable to suspect that all existing Reference Standards are subject to some biological deterioration, yet, at present there are no systematic attempts to test the reference standards to determine their duration of potency. This Panel recommends the initiation of studies to determine methods by which reference standards can be maintained reliably for long periods of time.

#### DATING PERIOD LIMITATIONS

Section 610.50 refers to products for which an official standard of potency is prescribed in § 610.20 or § 610.21. Such products include only diphtheria toxin for the Schick test, Old Tuberculin and Tuberculin, PPD. For products not subject to official potency tests, dating period limitations begin from the date of extraction, the date of solution, or the date of cessation of growth, whichever is applicable. Sections 610.51 and 610.52 indicate that, except as otherwise provided, products may be held in cold storage by the manufacturer at a tempera-

ture not above 5° C for 1 year and at a temperature not above 0° C for 2 years. The dating period begins on the date of manufacture, except when the material is stored according to the above temperature, at which point it may be dated from the date of issue from the manufacturer's cold storage. If it is held in a manufacturer's cold storage beyond the period indicated above, then the dating period has to be reduced for the period in excess of that allowed by manufacturer's cold storage. In the latter circumstances the storage temperatures and times allowed the manufacturer vary from the general provisions of § 610.51. In such circumstances, dating after manufacture or withdrawal from the manufacturer's storage is given first, and in parenthesis the manufacturer's allowable storage temperatures and times are given. For example, "3 years (5° C, 1 year)" means that the product will have an expiration date 3 years after the manufacturer takes it out of storage, and that the storage period is limited to 5° C for 1 year. The Panel believes that the dating periods in § 610.53 are reasonable but recommends that they should be established for each manufacturer's product by scientific investigation.

#### ADDITIONAL RECOMMENDATIONS

In addition to the specific recommended changes, a new regulation should be developed concerning "Standardization of Skin Test products in Animals and Man" (Refs. 1 and 2). Also, tests for specific hazards need to be developed for each product on an individual basis and applied at the most advantageous point in the manufacturing process, which will usually be prior to the final preparation.

#### THIMEROSAL AS A PRESERVATIVE

A preservative is a substance added to a product for the purpose of destroying or inhibiting the multiplication of microorganisms. As described in the introduction, preservatives used in the the manufacture of diagnostic skin test antigens should neither sensitize the immune system nor elicit any other local or systemic host reaction.

Hypersensitivity to thimerosal and other mercurial compounds has been recognized for many years (Refs. 1, 2, and 14). It is receiving renewed attention because of the inclusion of thimerosal as a preservative in many licensed biologic products (Refs. 3 through 13 and 16). Of the approximately 180 licensed products containing thimerosal, 15 contain thimerosal at a concentration of 1:20,000 (w/v), 3 at 1:30,000, and 1 at 1:40,000. All others are preserved with

1:10,000 except for a few dried products with higher concentrations.

Products containing thimerosal include allergenic extracts, antisera, antivenins, bacterial, bedsonial and viral vaccines, immune serum globulins, antitoxins and toxoids; skin tests for bacteria, fungi and viruses; and miscellaneous items such as laboratory diagnostic agents. Most are beneficial or instructive only if injected intracutaneously, subcutaneously, intramuscularly or intravenously.

Since many persons, particularly children, are routinely injected with a number of these products, there is the possibility that any sensitizing property of thimerosal in any one product could be cumulative following the administration of several products. Thus, the danger of sensitivity to mercury may be considerably greater than in years prior to the frequent use of many products preserved with derivatives of this element. Additional opportunities for sensitization may also be provided by ingestion of foods contaminated by certain industrial mercurial wastes, e.g., fish—or merely by topical application. The few published reports could be portents of more serious difficulties yet to come in a population frequently injected with products preserved with thimerosal.

Ellis and Robinson (Ref. 2) first noted cutaneous sensitivity to thimerosal and other mercurial compounds in 1942. Five years later Ellis (Ref. 1) defined a sensitizing factor in thimerosal as the thio-salicylate. Little further work was done until 1963 when Epstein (Ref. 3) demonstrated that hypersensitivity to mercury compounds might be manifested as delayed hypersensitivity reactions. In 1969 Reisman (Ref. 11) working with patients in an allergy clinic at Brooke General Hospital found 10 patients within 6 months whose reactions were due to the thimerosal (1:10,000) preservative in the allergenic testing solutions. He noted the number of vaccines—both licensed and experimental—received by service personnel and recommended that "in view of the availability of phenol which rarely, if ever, sensitizes, there seems to be little reason to continue to use Merthiolate as a preservative in allergy extracts."

After an investigation of the cause of side reactions to tetanus toxoid among military personnel in Sweden, Hansson and Möller (Ref. 6) further investigated thimerosal, the toxoid preservative, as a possible cause of these reactions. They patch tested three groups with 0.1 percent thimerosal. Healthy recruits were in Group A (203) and B (29). Reactions occurred among 33 (16 percent) and 10 (35 percent), respectively. Of 247 patients in Group C with suspect contact dermatitis, 89 (36 percent) reacted to standard allergens and 10 (7 percent) to the thimerosal. In 51 patients with various dermatoses (Group D) none reacted to thimerosal at 1.0 percent. Patients in groups C and D were two to three decades older than the healthy recruits in groups A and B. From these findings the authors deduced that age might be a factor in thimerosal sensitivity. It is also notable that subjects in Group B were trained as

hospital orderlies and in addition to receiving service immunizations were quite likely exposed to mercurial derivatives in other ways. In a later study conducted by Hansson and Möller (Ref. 7), 15 percent of a group of 412 males reacted positively to thimerosal, 0.1 percent in saline at 48 and 72 hours.

This study doubtless led to a similar study, "Coccioidin and Merthiolate in Previously Sensitized Animals (Ref. 4)." A statistical analysis of skin test responses was used to detect fine differences when thimerosal was (1) incorporated into a skin test material or (2) used as a preservative in a sensitizing material. Skin tests were also done with the basic medium in which the coccioidins were prepared, with and without the thimerosal preservative. The authors concluded from this study that "the use of Merthiolate in human skin test materials should be given careful consideration."

On the other hand skin test antigens containing thimerosal have been given to large numbers of persons without eliciting excessive positive skin reactions attributable to thimerosal. For example, in many studies, histoplasmin preserved with thimerosal has produced virtually no reactions (Refs. 17 and 18).

As demonstrated in guinea pigs, reactions to skin test antigens containing thimerosal are significantly enhanced by prior exposure (of the individual) to thimerosal. If a positive reaction is produced in response to an antigen preserved in thimerosal it cannot be known whether the reaction was produced by the antigen or the thimerosal. The presence of thimerosal did not cause a decrease in the size of reactions to coccioidin in a study in animals but reactions to coccioidins containing thimerosal were generally greater than to those without thimerosal (Ref. 4). This finding may be most important in the indeterminate region of a skin test reaction where a truly negative reactor may be classified as positive because of the added reaction caused by thimerosal.

#### RECOMMENDATIONS

There is now evidence that thimerosal may (1) induce cell mediated hypersensitivity and (2) affect the size of the delayed skin test reaction in some subjects. Therefore, (1) when other preservatives have been demonstrated to be safe, effective, nonsensitizing (as well as not causing deterioration of the product, products containing thimerosal should be discontinued; and (2) a search for safe, effective and nonsensitizing preservatives as alternatives for thimerosal should be initiated.

#### STATEMENT CONCERNING SKIN TEST REAGENTS EMPLOYED FOR ASSESSING IMMUNOCOMPETENCE

A variety of skin test antigens is frequently employed in tests to assess immunocompetence. For this reason the Panel on Review of Skin Test Antigens submits the following statement.

The rationale for using skin tests for this purpose is based on the presumption that the individual being tested has had previous experience with the antigenic material. A negative Schick Test implies that the individual is capable of producing antibodies. A positive delayed-type skin reaction implies that the cellular immune system is competent; a negative test implies that the individual is immunologically naive or deficient. Currently there is no single antigen which can be used to evaluate all aspects of

immune function. Therefore, a battery of skin test antigens is employed for assessing cellular immunocompetence. The following materials have been included in this battery:

- (1) Tuberculin, PPD.
- (2) Candida extract (oldiomycin).
- (3) Trichophyton.
- (4) Streptococcus antigen (Streptokinase streptodornase).
- (5) Mumps skin test antigen.

In geographical areas where there is a high incidence of reactivity to certain antigens such as coccioidin and histoplasmin, these antigens may serve as additional reagents.

It is the Panel's charge to review these products for safety and effectiveness for their labeled uses. Since the use in measuring delayed hypersensitive immunocompetency is not part of the present licenses, the Panel can only recognize that such use exists based upon reports in the literature, letters from physicians, and personal experience. A new license application or license amendment from the producers should be submitted for this new indication with supportive data on effectiveness and standardization. The Panel recommends that this be accomplished.

The Commissioner is responding to the Panel's recommendations as follows:

1. The Panel recommended that skin test antigens be grouped into regulatory categories, as follows:

- (a) *Category I. Biological products determined to be safe and effective and not misbranded and should continue in interstate commerce.* Tuberculin, Old (multiple puncture device), Lederle Laboratories, license No. 17; Tuberculin, Old (multiple puncture device), Institut Merieux, license No. 384; Tuberculin, PPD (Mantoux intradermal), Connaught Laboratories, Ltd., license No. 73; Tuberculin, PPD (Mantoux intradermal), Parke, Davis and Co., license No. 1; Tuberculin PPD (multiple puncture device), Parke, Davis and Co., license No. 1.

The Commissioner agrees with the Panel's findings and recommendations concerning these drugs and, in accordance with § 601.25(f)(1), hereby proposes that they should remain in interstate commerce and that their licenses should remain in effect. Comments and/or additional data on the Category I status of these products are invited.

(b) *Category II. Biological products determined to be unsafe or ineffective or to be misbranded and should not continue in interstate commerce.* Lymphogranuloma Venereum Antigen, Lederle Laboratories, license No. 17; Trichinella Extract, Lederle Laboratories, license No. 17.

The Commissioner agrees with the Panel's findings and recommendations concerning these drugs. However, proceedings toward revocation to implement the Commissioner's conclusion are unnecessary since, at the request of Lederle Laboratories, the licenses for Lymphogranuloma Venereum Antigen and Trichinella Extract were revoked on August 11, 1975 and March 16, 1976 respectively.

(c) *Category IIIA.—Biological products for which available data are insufficient to classify their safety and effectiveness but which may remain in interstate commerce pending completion of testing.* Coccioidin, Cutter Laboratories, Inc., license No. 8; Coccioidin, Iatric Corporation, license No. 416; Histoplasmin, Parke, Davis and Company, license No. 1; Histoplasmin, Bureau of Laboratories, Michigan, license No. 99; Diphtheria Toxin for Schick Test, Massachusetts Public Health Biologics Laboratories, license No. 64; and Tuberculin, PPD (multiple puncture device), Connaught Laboratories, Ltd., license No. 73.

The Commissioner agrees with the Panel's findings and recommendations concerning these drugs and hereby proposes, in accordance with § 601.25(f)(3), that products listed in Category IIIA remain on the market and their licenses remain in effect on an interim basis provided that acceptable data based on scientifically sound studies (as recommended in the Panel report) be submitted to demonstrate efficacy in humans. Such studies shall be in accordance with the Panel's recommendations and § 601.25(h), and shall be completed within 2 years of publication of the final order. Failure to submit adequate data, in the form of a license amendment, within the specified time will result in the publication of a notice of an opportunity for hearing to revoke the product license. Comments and/or additional data on the Category IIIA status of these products are invited.

Since the Panel's conclusions concerning the effectiveness of Category IIIA drugs is a material fact within the meaning of 21 U.S.C. 321(n) and 21 CFR 1.21 the failure to disclose which causes these drugs to be misbranded, the Commissioner also proposes that the circular and the promotional material for these drugs must have a prominent boxed statement referencing the need for further data to fully establish effectiveness. Moreover, the Commissioner also proposes that a written informed consent be obtained from participants in the requisite additional studies, that an explanation of the product and the purpose of the study is given and that a clear opportunity to refuse to participate in the study is presented. Accordingly, § 601.25 is proposed to be amended to require this information.

(d) *Category IIIB.—Biological products for which available data are insufficient to classify their safety and effectiveness and should not continue in interstate commerce.* Product licenses are to be revoked for the following products pending completion of testing and label revision, as recommended in the Panel report: Histoplasmin (multiple puncture device), Lederle Laboratories, license No. 17; Mumps Skin Test Antigen, Eli Lilly and Company, license No. 56; Diphtheria Toxin for Schick Test, and Diphtheria Toxin for Schick Test Control, Texas Department of Health Resources, license No. 121; Diphtheria Toxin for Schick Test, Parke, Davis and Company, license No. 1; Lymphogranuloma Venereum Antigen, E. R. Squibb and Sons, Inc., license No. 52; Tuberculin, Old, Parke, Davis and Company, license No. 1; Tuberculin, Old, Eli Lilly and Company, license No. 56; Tuberculin, Old, Massachusetts Public Health Biologics Laboratories, license No. 64; Tuberculin, Old, Texas Department of Health Resources, license No. 121. The Panel recommended a period of 2 years for completion of testing.

The Commissioner agrees with the Panel's findings and recommendations concerning these drugs and, in accordance with §§ 601.5 and 601.25(f)(3), intends to publish a notice of opportunity for hearing to revoke the licenses for these products by or before October 31, 1977. Interested persons may comment and/or submit additional data in response to the notice. In addition, with respect to Diphtheria Toxin for Schick Test and Tuberculin, Old, processed by Parke, Davis & Co., and Lymphogranuloma Venereum Antigen, processed by E. R. Squibb & Sons, Inc., the Commissioner also intends to base revocation upon the fact that manufacture has discontinued to such an extent that a meaningful inspection cannot be made, as prescribed in § 601.5(b)(2). These revocation procedures will be unnecessary for Tuberculin, Old, manufactured by the Texas Department of Health Resources under license No. 121 and Histoplasmin manufactured by Lederle Laboratories under license No. 17 because, at the request of the licensees, the licenses were revoked on July 14, 1977 and August 11, 1975, respectively.

2. The Panel noted that specific requirements, called "additional standards," for Tuberculin (21 CFR 650.10-650.15) and Diphtheria Toxin For Schick Test (21 CFR 650.1-650.7) are published in the Code of Federal Regulations. They recommended that similar additional standards be published for Coccioidin, Histoplasmin, Schick Test control, Lymphogranuloma Venereum Antigen, Mumps Skin Test Antigen and Trichinella Extract.

The Commissioner accepts the Panel's recommendations concerning the initiation of studies to determine methods by which reference standards can be maintained reliably for long periods of time, (b) amendment of the biologic regulations to include a new regulation concerning standardization of skin test products in animals and man, and (c) amendment of § 610.53 concerning dating period for specific products to establish a dating period determined by scientific investigation for each manufacturer's product.

The Commissioner also recognizes that fungal antigens are expected to contain pyrogens. However, the listing of "diagnostic substances" in § 610.13(b) as being among those products exempted from the requirement of a pyrogen test includes fungal antigens. Accordingly, there is no need to amend § 610.13(b).

5. The Panel recommended (a) initiation of studies to determine methods by which reference standards can be maintained reliably for long periods of time, (b) amendment of the biologic regulations to include a new regulation concerning standardization of skin test products in animals and man, and (c) amendment of § 610.53 concerning dating period for specific products to establish a dating period determined by scientific investigation for each manufacturer's product.

The Commissioner accepts the Panel's recommendations concerning the initiation of studies to assure that reference standards can be maintained reliably for long periods of time, and the issuance of a regulation on the standardization of skin test products. Some studies responsive to the Panel's recommendations are in progress, and others will begin as soon as feasible and as priorities permit. When sufficient data from these studies will permit, a proposal on standardization will be published. The Commissioner advises that § 610.53 is intended to prescribe dating periods for each product type rather than for each manufacturer's product. The regulation identifies the dating period permitted and includes a margin of safety. Data have been pre-

The Commissioner notes that there are existing standards, called "minimum requirements," for three of these products and the licenses for the others have been or will be proposed to be revoked. Accordingly, it appears that published "additional standards" are not of high priority at this time but will be codified when feasible and if necessary.

3. The Panel recommended that § 610.1 be amended to prescribe specific tests to insure sterility, including freedom from mycoplasma and viruses, which may be present in licensed Lymphogranuloma Venereum Antigen, Mumps Skin Test Antigen, and Trichinella Extract products.

The Commissioner again notes that these licenses have been or will be proposed to be revoked. The Panel recommendation will be reconsidered if any new license applications for similar products are received and approved.

4. The Panel recommended that § 610.13 be amended to define "extraneous material" for each product and that § 610.13 be amended to include fungal antigens in the list of products exempted from the requirements of a pyrogen test.

The Commissioner recognizes that some extraneous material is unavoidable in the manufacturing process. The term "extraneous material" is not intended to include such contaminants. Accordingly, to clarify the regulation, the Commissioner proposes to amend § 610.13 to specify that products need to be free from avoidable, extraneous material.

The Commissioner also recognizes that fungal antigens are expected to contain pyrogens. However, the listing of "diagnostic substances" in § 610.13(b) as being among those products exempted from the requirement of a pyrogen test includes fungal antigens. Accordingly, there is no need to amend § 610.13(b).

5. The Panel recommended (a) initiation of studies to determine methods by which reference standards can be maintained reliably for long periods of time, (b) amendment of the biologic regulations to include a new regulation concerning standardization of skin test products in animals and man, and (c) amendment of § 610.53 concerning dating period for specific products to establish a dating period determined by scientific investigation for each manufacturer's product.

The Commissioner accepts the Panel's recommendations concerning the initiation of studies to assure that reference standards can be maintained reliably for long periods of time, and the issuance of a regulation on the standardization of skin test products. Some studies responsive to the Panel's recommendations are in progress, and others will begin as soon as feasible and as priorities permit. When sufficient data from these studies will permit, a proposal on standardization will be published. The Commissioner advises that § 610.53 is intended to prescribe dating periods for each product type rather than for each manufacturer's product. The regulation identifies the dating period permitted and includes a margin of safety. Data have been pre-

viously submitted by each manufacturer demonstrating stability within these limits. However, the Commissioner will consider data supporting a license amendment for a separate or different dating period for the licensed product manufactured by any particular licensee.

6. The Panel noted that there is evidence that thimerosal (a mercurial preservative) may induce cell mediated hypersensitivity to itself and affect the size of the delayed skin reaction in some subjects. This results, in effect, in a false positive reaction. Therefore, when other preservatives have been demonstrated to be safe, effective, and nonsensitizing, products containing thimerosal should be discontinued. Accordingly, a search for safe, effective, and nonsensitizing preservatives as alternatives for thimerosal should be initiated.

The Commissioner agrees with this recommendation. There are only a few preservatives that have been found to be safe and effective for use in injectable biological products. Other substances, frequently employed as preservatives in nonbiological products, are unacceptable because of interactions with the proteinaceous components of biologicals and because they may also be sensitizing. Due to these problems, extensive research is required to demonstrate the propriety of the new preservative in each biological product. Therefore, when other preservatives are shown to be safe and effective in ongoing studies of biological products, regulations proposing their use in place of thimerosal will be considered.

7. The Panel noted that the following antigens, among others, are frequently employed in tests to assess immunocompetence and recommended that they be licensed for this purpose, subsequent to the submission of effectiveness and standardization data:

- (a) Tuberculin, PPD.
- (b) Candida extract (ordiomycin).
- (c) Trichophyton.
- (d) Streptococcus antigen (Streptokinase Streptodornase).
- (e) Mumps Skin Test Antigen.

The Commissioner recognizes that some physicians, during their normal practice of medicine, use these products to assess immunocompetence. However, these products are not now labeled for this purpose by the manufacturer, and no data relating to the effectiveness of the products for this use have been submitted to FDA to support licensure although there is a clear need for products to assess immunocompetence. The Commissioner encourages the acquisition of data that would evaluate this use. However, until such data are provided, the labeling for these products must not represent or suggest usefulness for immunocompetence testing. Continued use of statements for this use will result in regulatory action.

8. The Panel suggested that the Biology regulations governing the manufacture of Tuberculin be amended to acquire that:

For each bulk lot of tuberculin material for use on multiple puncture devices for screening purposes, the product sensitivity shall be demonstrated to be sufficient to elicit positive reactions in 100 percent of at least 50 persons who are known to have had bacteriologically confirmed tuberculosis and who are tuberculin positive as demonstrated by a simultaneous Mantoux test with 5 TU of Tuberculin, Purified Protein Derivative . . .

For each bulk lot of tuberculin material for use by the Mantoux method, effectiveness data in humans should be supplied to include (1) comparison of the product with the standard by means of dose response curves, and (2) distribution of reaction sizes in persons known to be infected and in those presumed to be uninfected with *Mycobacterium tuberculosis* and in addition in persons presumed to be infected with other mycobacteria. Chemical characterization (including protein, carbohydrate, lipid and nucleic acid content) should be performed on each batch to assess consistency of production . . .

The Commissioner accepts the Panel's recommendations and proposes to incorporate these suggestions by amending Part 650.

9. The Panel recommended that evidence be furnished for the long-term safety of the red dye, FD&C Red No. 2, or that the dye be eliminated from the product Histoplasmin, produced by Parke, Davis and Company. This color was originally included in the product in a concentration of 1 to 7,000 or 0.143 micrograms per intracutaneous dose, to ensure proper quality control in the filling operation by making visible the extremely small volume of fill.

The Commissioner advises that action has been taken to reformulate and eliminate the color from the product. Various alternatives are being explored to ensure proper quality control during filling.

The Commissioner has carefully considered the environmental effects of the proposed regulation and, because the proposed action will not significantly affect the quality of the human environment, has concluded that an environmental impact statement is not required. A copy of the environmental impact assessment is on file with the Hearing Clerk, Food and Drug Administration.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 201, 502, 505, 701, 52 Stat. 1040-1042 as amended, 1050-1053 as amended, 1055-1056 as amended by 70 Stat. 919 and 72 Stat. 948 (21 U.S.C. 321, 352, 355, 371)), the Public Health Service Act (sec. 351, 58 Stat. 702 as amended (42 U.S.C. 262)), and the Administrative Procedure Act (secs. 4, 10, 60 Stat. 238 and 243 as amended (5 U.S.C. 553, 702, 703, 704)), and under authority delegated to him (21 CFR 5.1), the Commissioner is proposing that Parts 601, 610 and 650 in Subchapter F of Chapter I of Title 21 of the Code of Federal Regulations be amended as follows:

#### PART 601—LICENSING

1. In Part 601 by amending § 601.25(h) by revising the paragraph heading and adding new (h) (4) and (5) to read as follows:

§ 601.25 Review procedures to determine that licensed biological products are safe, effective, and not misbranded under prescribed, recommended or suggested conditions of use.

(h) Additional studies and labeling.

(4) Labeling and promotional material for products requiring additional studies shall bear a box statement in the following format:

Based on a review by the Panel on  
Review of (insert name of appropriate  
panel) and other information, the Food  
and Drug Administration has  
directed that further investigation  
be conducted before this product is  
determined to be fully effective for  
the labeled indication(s).

(5) A written informed consent shall be obtained from participants in the requisite additional studies explaining the nature of the product and the investigation. The explanation shall consist of such disclosure and be made so that intelligent and informed consent be given and that a clear opportunity to refuse is presented.

#### PART 610—GENERAL BIOLOGICAL PRODUCTS STANDARDS

2. In Part 610 by amending § 610.13 by revising the introductory paragraph to read as follows:

§ 610.13 Purity.

Products shall be free from extraneous material except that which is unavoidable in the process in the approved license. In addition, products shall be tested as provided in paragraphs (a) and (b) of this section.

#### PART 650—ADDITIONAL STANDARDS FOR DIAGNOSTIC SUBSTANCES FOR DERMAL TESTS

3. In Part 650: a. By amending § 650.13 by adding new paragraph (c) to read as follows:

§ 650.13 Production.

(c) Chemical characterization. Each batch of powdered tuberculin material shall be chemically characterized, including protein, carbohydrate, lipid and nucleic acid content to assess consistency of production.

b. By amending § 650.14, by revising the title to read as follows:

§ 650.14 Potency testing in animals.

c. By redesignating existing § 650.15 as § 650.16 Equivalent methods.

d. By adding new § 650.15 to read as follows:

§ 650.15 Potency testing in humans.

(a) The sensitivity of each batch of tuberculin material for use on multiple puncture devices for screening purposes shall be demonstrated to be sufficient to elicit positive reactions in 100 percent of at least 50 persons who are known to have had bacteriologically confirmed tuberculosis and who are tuberculin positive as demonstrated by a simultaneous Mantoux test with 5 TU of Tuberculin, Purified Derivative.

(b) The product effectiveness of each batch of tuberculin material for use by the Mantoux method shall include comparison of the product with the standard by means of (1) dose response curves, and (2) distribution of reaction sizes in persons presumed to be uninfected with *Mycobacterium tuberculosis* or other mycobacteria, in persons known to be infected with *M. tuberculosis*, and in persons presumed to be infected with other mycobacteria.

Interested persons may, on or before November 29, 1977, submit to the Hearing Clerk (HFC-20), Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be

identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

NOTE.—The Food and Drug Administration has determined that this document does not contain a major proposal requiring preparation of an inflation impact statement under Executive Order 11821 and OMB Circular A-107. A copy of this inflation impact assessment is on file with the Hearing Clerk, Food and Drug Administration.

Dated: September 19, 1977.

DONALD KENNEDY,  
Commissioner of Food and Drugs.

## [ 4210-01 ]

## Title 24—Housing and Urban Development

## CHAPTER X—FEDERAL INSURANCE ADMINISTRATION

## SUBCHAPTER B—NATIONAL FLOOD INSURANCE PROGRAM

[Docket No. FI 3107]

## PART 1917—APPEALS FROM PROPOSED FLOOD ELEVATION DETERMINATIONS

## Final Flood Elevation Determination for the Village of Sherman, Chautauqua County, N.Y.

AGENCY: Federal Insurance Administration, HUD.

ACTION: Final rule.

SUMMARY: Final base flood elevations (100-year flood) are listed below for selected locations in the Village of Sherman, Chautauqua County, N.Y. These base flood elevations are the basis for the flood plain management measures that the community is required to either adopt or show evidence of being already in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

EFFECTIVE DATE: On publication of the Flood Insurance Rate Map for the Village of Sherman, Chautauqua County, N.Y.

ADDRESSES: Maps and other information showing the detailed outlines of the flood-prone areas and the final elevations for the Village of Sherman, Chautauqua County, N.Y., are available for review at the Fire Hall, Park Street, Sherman, N.Y.

## FOR FURTHER INFORMATION CONTACT:

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, 202-755-5581 or toll free line 800-424-8872, Room 5270, 451 Seventh Street SW., Washington, D.C. 20410.

SUPPLEMENTARY INFORMATION: The Federal Insurance Administrator gives notice of his final determinations of flood elevations for the Village of Sherman, Chautauqua County, N.Y.

This final rule is issued in accordance with section 110 of the Flood Disaster Protection Act of 1973 (Pub. L. 93-234), 87 Stat. 980, which added section 1363 to the National Flood Insurance Act of 1968 (Title XIII of the Housing and Urban Development Act of 1968 (Pub. L. 90-448), 42 U.S.C. 4001-4128, and 24 CFR Part 1917). An opportunity for the community or individuals to appeal this determination to or through the community for a period of ninety (90) days has been provided. No appeals of the proposed base flood elevations were received from the community or from individuals within the community.

The Administrator, to whom the Secretary has delegated the statutory authority, has developed criteria for flood plain management in flood-prone areas in accordance with 24 CFR Part 1910.

The final 100-year flood elevations for selected locations are:

Source of flooding	Location	Elevation in feet above mean sea level
Tributary No. 1	Downstream corporate limit	1,575
	Hart St.	1,530
	Franklin St.	1,542
	Dam	1,500
Tributary No. 2	Upstream corporate limits	1,500
	Confluence with French Creek	1,526
	Hart St.	1,535
	600 ft upstream from Hart St.	1,549
Tributary No. 3	600 ft upstream from Hart St.	1,550
	Hart St.	1,540
	Osborne St.	1,540
	650 ft upstream from Osborne St.	1,549

## PART 1917—APPEALS FROM PROPOSED FLOOD ELEVATION DETERMINATIONS

## Final Flood Elevation Determination for the Village of South Corning, Steuben County, N.Y.

AGENCY: Federal Insurance Administration, HUD.

ACTION: Final rule.

SUMMARY: Final base flood elevations (100-year flood) are listed below for selected locations in the Village of South Corning, Steuben County, N.Y. These base flood elevations are the basis for the flood plain management measures that the community is required to either adopt or show evidence of being already in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

EFFECTIVE DATE: On publication of the Flood Insurance Rate Map for the Village of South Corning, Steuben County, N.Y.

ADDRESSES: Maps and other information showing the detailed outlines of the flood-prone areas and the final elevations for the Village of South Corning, Steuben County, N.Y., are available for review at the Village Hall on the bulletin Board, 1, Clark Street, Corning, N.Y.

## FOR FURTHER INFORMATION CONTACT:

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, 202-755-5581 or toll free line 800-424-8872, Room 5270, 451 Seventh Street, S.W., Washington, D.C. 20410.

SUPPLEMENTARY INFORMATION: The Federal Insurance Administrator gives notice of his final determinations of flood elevations for the Village of South Corning, Steuben County, N.Y.

This final rule is issued in accordance with section 110 of the Flood Disaster Protection Act of 1973 (Pub. L. 93-234), 87 Stat. 980, which added section 1363 to the National Flood Insurance Act of 1968 (Title XIII of the Housing and Urban Development Act of 1968 (Pub. L. 90-448), 42 U.S.C. 4001-4128, and 24 CFR Part 1917). An opportunity for the community or individuals to appeal this determination to or through the community for a period of ninety (90) days has been provided. No appeals of the proposed base flood elevations were received from the community or from individuals within the community.

The Administrator, to whom the Secretary has delegated the statutory authority, has developed criteria for flood

plain management in flood-prone areas in accordance with 24 CFR Part 1910.

The final 100-year flood elevations for selected locations are:

Source of flooding	Location	Elevation in feet, national geodetic vertical datum
Chemung River	South corporate limit	922
	New York Route 225 (extended)	923
	Tuxill Ave. (extended)	921
	North corporate limits	925

(National Flood Insurance Act of 1968 (Title XIII of Housing and Urban Development Act of 1968), effective January 28, 1969 (33 FR 17804, November 28, 1968), as amended; 42 U.S.C. 4001-4128; and Secretary's delegation of authority to Federal Insurance Administrator, 34 FR 2680, February 27, 1969, as amended (39 FR 2787, January 24, 1974).)

Issued: August 30, 1977.

[Docket No. FI-2955]

## PART 1917—APPEALS FROM PROPOSED FLOOD ELEVATION DETERMINATIONS

## Final Flood Elevation Determination for the Village of Whitesboro, Oneida County, N.Y.

AGENCY: Federal Insurance Administration, HUD.

ACTION: Final rule.

SUMMARY: Final base flood elevations (100-year flood) are listed below for selected locations in the Village of Whitesboro, Oneida County, N.Y. These base flood elevations are the basis for the flood plain management measures that the community is required to either adopt or show evidence of being already in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

EFFECTIVE DATE: On publication of the Flood Insurance Rate Map for the Village of Whitesboro, Oneida County, N.Y.

ADDRESSES: Maps and other information showing the detailed outlines of the flood-prone areas and the final elevations for the Village of Whitesboro, Oneida County, N.Y., are available for review at the Town Hall, 8 Park Avenue, Whitesboro, N.Y.

## FOR FURTHER INFORMATION CONTACT:

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, (202-755-5581), or Toll Free Line (800-424-8872), room 5270, 451 Seventh Street SW., Washington, D.C. 20410.

SUPPLEMENTARY INFORMATION: The Federal Insurance Administrator gives notice of his final determinations of flood elevations for the Village of Whitesboro, Oneida County, N.Y.

This final rule is issued in accordance with Section 110 of the Flood Disaster Protection Act of 1973 (Pub. L. 93-234), 87 Stat. 980, which added Section 1363 to the National Flood Insurance Act of 1968 (Title XIII of the Housing and Urban Development Act of 1968 (Pub. L. 90-448), 42 U.S.C. 4001-4128, and 24 CFR Part 1917). An opportunity for the community or individuals to appeal this determination to or through the community for a period of ninety (90) days has been provided. No appeals of the proposed base flood elevations were received from the community or from individuals within the community.

The Administrator, to whom the Secretary has delegated the statutory authority, has developed criteria for flood plain management in flood-prone areas in accordance with 24 CFR Part 1910.

The final 100-year flood elevations for selected locations are:

Source of flooding	Location	Elevation in feet above mean sea level
Sauguot Creek	Oriskany Blvd	420
	Main St.	416
	Sauguot St. (extended)	415
Mohawk River	Ellis St. (extended)	415
	Mohawk St. (extended)	415
	Linwood Pl. (extended)	415
	New York State Throughway (Glendale Ave. (extended))	416

(National Flood Insurance Act of 1968 (Title XIII of Housing and Urban Development Act of 1968), effective January 28, 1969 (33 FR 17804, November 28, 1968), as amended; 42 U.S.C. 4001-4128; and Secretary's delegation of authority to Federal Insurance Administrator 34 FR 2680, February 27, 1969, as amended (39 FR 2787, January 24, 1974).)

Issued: August 30, 1977.

[Docket No. FI-2859]

## PART 1917—APPEALS FROM PROPOSED FLOOD ELEVATION DETERMINATIONS

## Final Flood Elevation Determination for Polk County, Oregon.

AGENCY: Federal Insurance Administration, HUD.

ACTION: Final rule.

SUMMARY: Final base flood elevations (100-year flood) are listed below for selected locations in Polk County, Oregon. These base flood elevations are the basis for the flood plain management measures that the community is required to

either adopt or show evidence of being already in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

**EFFECTIVE DATE:** On publication of the Flood Insurance Rate Map for Polk County, Ore.

**ADDRESSES:** Maps and other information showing the detailed outlines of the flood-prone areas and the final elevations for Polk County are available for review at Polk County Courthouse, Room 201, Dallas, Ore.

**FOR FURTHER INFORMATION CONTACT:**

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, (202-755-5581, or Toll Free Line (800-424-8872), room 5270, 451 Seventh Street, SW., Washington, D.C. 20410.

**SUPPLEMENTARY INFORMATION:** The Federal Insurance Administrator gives notice of his final determinations of flood elevations for Polk County, Ore.

This final rule is issued in accordance with Section 110 of the Flood Disaster Protection Act of 1973 (Pub. L. 93-234), 87 Stat. 980, which added Section 1363 to the National Flood Insurance Act of 1968 (Title XIII of the Housing and Urban Development Act of 1968 (Pub. L. 90-448), 42 U.S.C. 4001-4128, and 24 CFR Part 1917).

An opportunity for the community or individuals to appeal this determination to or through the community for a period of ninety (90) days has been provided. No appeals of the proposed base flood elevations were received from the community or from individuals within the community.

The Administrator, to whom the Secretary has delegated the statutory authority, has developed criteria for flood plain management in flood-prone areas in accordance with 24 CFR Part 1910.

The final 100-year flood elevations for selected locations are:

Source of flooding	Location	Elevation in feet, national geodetic vertical datum
Rock Creek..	County Rd. 683	329
South Yamhill River.	County Rd. 687.....	346
	County Rd. 691.....	331
	SR 18 and 22 east of Valley Junction.	294
	SR 18 and 22 west of Fort Hill.	280
	County Rd. 674	370
	Dallas Coast Highway.	243
Rockwell Creek	Fir Villa Rd	265
	Bowersville Rd	245
	Pacific Highway.	300
	West.	188
	Greenwood Rd.	153
Williamette River	Route 51.....	125
	Lower line crossing near Lincoln Parks.	125
	Power line crossing 0.5 mi west of Wilsona.	145

(National Flood Insurance Act of 1968 (Title XIII of Housing and Urban Development Act of 1968), effective January 28, 1969 (33 FR

17804, November 28, 1968), as amended; 42 U.S.C. 4001-4128; and Secretary's delegation of authority to Federal Insurance Administrator, 34 FR 2680, February 27, 1969, as amended (39 FR 2787, January 24, 1974).)

Issued: August 30, 1977.

[Docket No. FI-3129]

PART 1917—APPEALS FROM PROPOSED FLOOD ELEVATION DETERMINATIONS

Final Flood Elevation Determination for the Borough of Williamsburg, Blain County, Pa.

AGENCY: Federal Insurance Administration, HUD.

ACTION: Final rule.

SUMMARY: Final base flood elevations (100-year flood) are listed below for selected locations in the Borough of Williamsburg, Blain County, Pa. These base flood elevations are the basis for the flood plain management measures that the community is required to either adopt or show evidence of being already in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

EFFECTIVE DATE: On publication of the Flood Insurance Rate Map for the Borough of Williamsburg, Blain County, Pa.

ADDRESSES: Maps and other information showing the detailed outlines of the flood-prone areas and the final elevations for the Borough of Williamsburg, Blain County, Pa., are available for review at the Borough Office, 305 East 2nd Street, Williamsburg, Pa.

FOR FURTHER INFORMATION CONTACT:

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, 202-755-5581 or Toll Free Line 800-424-8872, Room 5270, 451 Seventh Street, Southwest, Washington, D.C. 20410.

SUPPLEMENTARY INFORMATION: The Federal Insurance Administrator gives notice of his final determinations of flood elevations for the Borough of Williamsburg, Blain County, Pa.

This final rule is issued in accordance with Section 110 of the Flood Disaster Protection Act of 1973 (Pub. L. 93-234), 87 Stat. 980, which added Section 1363 to the National Flood Insurance Act of 1968 (Title XIII of the Housing and Urban Development Act of 1968 (Pub. L. 90-448), 42 U.S.C. 4001-4128, and 24 CFR Part 1917). An opportunity for the community or individuals to appeal this determination to or through the community for a period of ninety (90) days has been provided. No appeals of the proposed base flood elevations were received from the community or from individuals within the community.

The Administrator, to whom the Secretary has delegated the statutory authority, has developed criteria for flood plain management in flood-prone areas in accordance with 24 CFR Part 1910.

The final 100-year flood elevations for selected locations are:

Source of flooding	Location	Elevation in feet above mean sea level
Frankstown Branch, Juniata River	Downstream corporate limits.....	852
	High St.....	864
	Westaco Bridge.....	854
	Upstream corporate limits.....	864

(National Flood Insurance Act of 1968 (Title XIII of Housing and Urban Development Act of 1968), effective January 28, 1969 (33 FR 17804, November 28, 1968), as amended; 42 U.S.C. 4001-4128; and Secretary's delegation of authority to Federal Insurance Administrator 34 FR 2680, February 27, 1969, as amended (39 FR 2787, January 24, 1974).)

Issued: August 30, 1977.

PATRICIA ROBERTS HARRIS,  
Secretary.

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, 202-755-5581 or toll free line 800-424-8872, Room 5270, 451 Seventh Street SW., Washington, D.C. 20410.

SUPPLEMENTARY INFORMATION: The Federal Insurance Administrator gives notice of his final determinations of flood elevations for the Town of Mason.

This final rule is issued in accordance with section 110 of the Flood Disaster Protection Act of 1973 (Pub. L. 93-234), 87 Stat. 980, which added section 1363 to the National Flood Insurance Act of 1968 (Title XIII of the Housing and Urban Development Act of 1968 (Pub. L. 90-448), 42 U.S.C. 4001-4128, and 24 CFR Part 1917).

An opportunity for the community or individuals to appeal this determination to or through the community for a period of ninety (90) days has been provided. No appeals of the proposed base flood elevations were received from the community or from individuals within the community.

The Administrator, to whom the Secretary has delegated the statutory authority, has developed criteria for flood plain management in flood-prone areas in accordance with 24 CFR Part 1910.

The final 100-year flood elevations for selected locations are:

Source of flooding	Location	Elevation in feet, national geodetic vertical datum
Ohio River	Pomroy Mason Highway Bridge.	577

(National Flood Insurance Act of 1968 (Title XIII of Housing and Urban Development Act of 1968), effective January 28, 1969 (33 FR 17804, November 28, 1968), as amended; 42 U.S.C. 4001-4128; and Secretary's delegation of authority to Federal Insurance Administrator 34 FR 2680, February 27, 1969, as amended (39 FR 2787, January 24, 1974).)

Issued: August 30, 1977.

PATRICIA ROBERTS HARRIS,  
Secretary.

[Docket No. FI-245]

PART 1920—PROCEDURE FOR MAP CORRECTION

Letter of Map Amendment for the City of Trumann, Ark.

AGENCY: Federal Insurance Administration, HUD.

ACTION: Final rule.

SUMMARY: On November 9, 1973, the Federal Insurance Administrator published a list of communities for which the Federal Insurance Administration (FIA) published maps identifying Special Flood Hazard Areas. This list included Trumann, Ark. It has been determined by FIA, after further technical review of the Flood Hazard Boundary Map for the city of Trumann, in light of additional, recently acquired flood information, that certain property (described below) is not within the Special Flood Hazard Area. This map amendment, by establishing that the subject property is not within the Special Flood Hazard Area, removes the requirement to purchase flood insurance for that property as a condition of Federal or federally related financial assistance for construction or acquisition purposes.

EFFECTIVE DATE: Date of this notice.

FOR FURTHER INFORMATION CONTACT:

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, 202-755-5581 or toll free line 800-424-8872, Room 5270, 451 Seventh Street, SW., Washington, D.C. 20410.

SUPPLEMENTARY INFORMATION: If a property owner was required to purchase flood insurance as a condition of Federal or federally related financial assistance for construction or acquisition purposes, and the lender now agrees to waive the property owner from maintaining flood insurance coverage on the basis of this map amendment, the property owner may obtain a full refund of the premium paid for the current policy year, provided that no claim is pending or has been paid on the policy in question during the same policy year. The premium refund may be obtained from the National Flood Insurers Association (NFIA) through the agent or broker who sold the policy.

The text reads as follows:

§ 1920.7 Notice of Letter of Map Amendment.

Map Number H 050176B Panel 01, published on November 9, 1973, in 38 FR 31009, indicates that:

That parcel of land containing 10.63 acres, Trumann, Arkansas, as described in the Deed recorded in Book 60, Page 517, and shown on Site Improvement and ment Plan-Site B, Housing Authority of the city of Trumann, Ark., Housing Project Number Ark 34-1, July 14, 1961;

That parcel of land containing 1.94 acres, more or less, in Trumann, Ark., as described in the Deed recorded in Book 70, Page 48, and shown on Site Improvement Plan-Site B, Housing Authority of the city of Trumann, Ark., Housing Project Number Ark 34-2, April 19, 1965;

And that parcel of land containing 6.999 acres in Trumann, Ark., as described in Deed recorded in Book 79, Page 239, and shown on Grading and Drainage Plan, Housing Authority of the city of Trumann, Ark., Housing Project Number Ark 34-4, May 1, 1969, as recorded in the office of the Clerk of the Circuit Court of Poinsett County, Ark., are within the Special Flood Hazard Area.

Map Number H 050176B Panel 01 is hereby corrected to reflect that the existing structures on the 10.63 acre parcel as shown on the Site Improvement and Grading Plan, July 14, 1961, with the following exceptions: 1A-1/3, 3B-2/3, 1A-2/3, 3A-1/3, 1B-3/3, 2A-2/3, and 1B-4/3; the existing structures on the 1.94 acre parcel of land as shown on the Site Improvement and Grading Plan-Site B, April 19, 1965, with the exception of structures 7 and 8;

And the existing structures as shown on the Grading and Drainage Plan, May 1, 1969, on the 6.999 acre parcel of land are not within the Special Flood Hazard Area identified on November 18, 1973.

(National Flood Insurance Act of 1968 (Title XIII of Housing and Urban Development Act of 1968), effective January 28, 1969 (33 FR 17804, November 28, 1968), as amended; 42 U.S.C. 4001-4128; and Secretary's delegation of authority to Federal Insurance Administrator 34 FR 2680, February 27, 1969, as amended (39 FR 2787, January 24, 1974).)

Issued: August 26, 1977.

[Docket No. FI-70-6986]

PART 1920—PROCEDURE FOR MAP CORRECTION

Letter of Map Amendment for Honolulu County, Hawaii

AGENCY: Federal Insurance Administration, HUD.

ACTION: Final rule.

SUMMARY: On June 5, 1970, the Federal Insurance Administrator published a list of communities for which the Federal Insurance Administration (FIA) published maps identifying Special Flood Hazard Areas. This list included Hono-

lulu County, Hawaii. It has been determined by FIA, after further technical review of the Flood Hazard Boundary map for the County of Honolulu, in light of additional, recently acquired flood information, that certain property (described below) is not within the Special Flood Hazard Area. This map amendment, by establishing that the subject property is not within the Special Flood Hazard Area, removes the requirement to purchase flood insurance for that property as a condition of Federal or federally related financial assistance for construction or acquisition purposes.

**EFFECTIVE DATE:** Date of this notice.  
**FOR FURTHER INFORMATION CONTACT:**

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, 202-755-5581 or toll free line 800-424-8872, Room 5270, 451 Seventh Street SW., Washington, D.C. 20410.

**SUPPLEMENTARY INFORMATION:** If a property owner was required to purchase flood insurance as a condition of Federal or federally-related financial assistance for construction or acquisition purposes, and the lender now agrees to waive the property owner from maintaining flood insurance coverage on the basis of this map amendment, the property owner may obtain a full refund of the premium paid for the current policy year, provided that no claim is pending or has been paid on the policy in question during the same policy year. The premium refund may be obtained from the National Flood Insurance Association (NFIA) through the agent or broker who sold the policy.

The text reads as follows:

§ 1920.7 Notice of Letter of map amendment.

Map No. H 150001 Panel 45, published on June 5, 1970, in 35 FR 8732, indicates that 42-264 Kalali Street, also being Lot 1468, Kaneohe, Hawaii, as shown on Map 128 of Land Court Application 1100, as filed in the office of the Registrar of the Land Court of Hawaii, Honolulu County, Hawaii, is within the Special Flood Hazard Area.

Map No. H 150001 Panel 45 is hereby corrected to reflect that the above property is not within the Special Flood Hazard Area identified on June 5, 1970.

(National Flood Insurance Act of 1968 (Title XIII of Housing and Urban Development Act of 1968), effective January 28, 1969 (33 FR 17804, November 28, 1968), as amended; 42 U.S.C. 4001-4128; and Secretary's delegation of authority to Federal Insurance Administrator, 34 FR 2680, February 27, 1969, as amended by 39 FR 2787, January 24, 1974.)

Issued: August 26, 1977.

PATRICIA ROBERTS HARRIS,  
Secretary.

[Docket No. FI-3012]

#### PART 1920—PROCEDURE FOR MAP CORRECTION

Letter of Map Amendment for Harris County, Tex.

AGENCY: Federal Insurance Administration, HUD.

ACTION: Final rule.

**SUMMARY:** On June 29, 1977, the Federal Insurance Administrator published a list of communities for which the Federal Insurance Administration (FIA) published maps identifying Special Flood Hazard Areas. This list included Harris County. It has been determined by FIA, after further technical review of the Flood Insurance Rate Map for the County of Harris, in light of additional, recently acquired flood information, that certain property (described below) is not within the Special Flood Hazard Area. This map amendment, by establishing that the subject property is not within the Special Flood Hazard Area, removes the requirement to purchase flood insurance for that property as a condition of Federal or Federally-related financial assistance for construction or acquisition purposes.

EFFECTIVE DATE: Date of this notice.

FOR FURTHER INFORMATION CONTACT:

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance,

ance, 202-755-5581 or Toll Free Line 800-424-8872, Room 5270, 451 Seventh Street SW., Washington, D.C. 20410.

**SUPPLEMENTARY INFORMATION:** If a property owner was required to purchase flood insurance as a condition of Federal or Federally-related financial assistance for construction or acquisition purposes, and the lender now agrees to waive the property owner from maintaining flood insurance coverage on the basis of this map amendment, the property owner may obtain a full refund of the premium paid for the current policy year, provided that no claim is pending or has been paid on the policy in question during the same policy year. The premium refund may be obtained from the National Flood Insurers Association (NFIA) through the agent or broker who sold the policy.

The text reads as follows:

§ 1920.7 Notice of Letter of Map Amendment.

Map No. H & I 480287B Panel 73, published on June 29, 1977, in 42 FR 33233, indicates that Sterling Green, Section Two as shown on a Plat by Leonard W. Shoemaker and Associates, dated December 1975, Harris County, Tex., as recorded in Volume 236, Page 15 of Plats, in the Office of the Clerk of the Court of Harris County, Tex., is within the Special Flood Hazard Area.

Map No. H & I 480287B Panel 73 is hereby corrected to reflect that the above property is not within the Special Flood Hazard Area identified on July 30, 1975. The property is in Zone C.

(National Flood Insurance Act of 1968 (Title XIII of Housing and Urban Development Act of 1968), effective January 28, 1969 (33 FR 17804, November 28, 1968), as amended; 42 U.S.C. 4001-4128; and Secretary's delegation of authority to Federal Insurance Administrator, 34 FR 2680, February 27, 1969, as amended by 39 FR 2787, January 24, 1974).

Issued: August 26, 1977.

PATRICIA ROBERTS HARRIS,

Secretary.

[Docket No. FI-410]

**PART 1920—PROCEDURE FOR MAP CORRECTION**

**Letter of Map Amendment for Anne Arundel County, Md.**

**AGENCY:** Federal Insurance Administration, HUD.

**ACTION:** Final rule.

**SUMMARY:** On November 29, 1974, the Federal Insurance Administrator published a list of communities for which the Federal Insurance Administration (FIA) published maps identifying Special Flood Hazard Areas. This list included Anne Arundel County, Md. It has been determined by FIA, after further technical review of the Flood Hazard Boundary map for the County of Anne Arundel, in light of additional, recently acquired flood information, that certain property (described below) is not within the Special Flood Hazard Area.

This map amendment, by establishing that the subject property is not within the Special Flood Hazard Area, removes the requirement to purchase flood insurance for that property as a condition of Federal or Federally-related financial assistance for construction or acquisition purposes.

**EFFECTIVE DATE:** Date of this notice.

**FOR FURTHER INFORMATION CONTACT:**

[Docket No. FI-410]

**PART 1920—PROCEDURE FOR MAP CORRECTION**

**Letter of Map Amendment for Anne Arundel County, Md.**

**AGENCY:** Federal Insurance Administration, HUD.

**ACTION:** Final rule.

**SUMMARY:** On November 29, 1974, the Federal Insurance Administrator published a list of communities for which the Federal Insurance Administration (FIA) published maps identifying Special Flood Hazard Areas. This list included Anne Arundel County, Md. It has been determined by FIA, after further technical review of the Flood Hazard Boundary map for the County of Anne Arundel, in light of additional, recently acquired flood information, that certain property (described below) is not within the Special Flood Hazard Area.

This map amendment, by establishing that the subject property is not within the Special Flood Hazard Area, removes the requirement to purchase flood insurance for that property as a condition of Federal or Federally-related financial assistance for construction or acquisition purposes.

**EFFECTIVE DATE:** Date of this notice.

**FOR FURTHER INFORMATION CONTACT:**

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, 202-755-5581 or toll free line 800-424-8872, Room 5270, 451 Seventh Street SW., Washington, D.C. 20410.

**SUPPLEMENTARY INFORMATION:** If a property owner was required to purchase flood insurance as a condition of Federal or Federally-related financial assistance for construction or acquisition purposes, and the lender now agrees to waive the property owner from maintaining flood insurance coverage on the basis of this map amendment, the prop-

erty owner may obtain a full refund of the premium paid for the current policy year, provided that no claim is pending or has been paid on the policy in question during the same policy year. The premium refund may be obtained from the National Flood Insurers Association (NFIA) through the agent or broker who sold the policy.

The text reads as follows:

**§ 1920.7 Notice of Letter of Map Amendment.**

Map No. H 240008 Panel 77, published on November 29, 1974, in 39 FR 41504, indicates that Lots 5052, 5053, and 5054, Woodland Beach Subdivision, Anne Arundel County, Md., as recorded in Liber 2786 of Deeds, Page 806, in the Office of the Clerk of the Circuit Court of Anne Arundel County, Md., are within the Special Flood Hazard Area.

Map No. H 240008 Panel 77 is hereby corrected to reflect that the existing structure on the above property is not within the Special Flood Hazard Area identified on November 15, 1974.

(National Flood Insurance Act of 1968 (Title XIII of Housing and Urban Development Act of 1968), effective January 28, 1969 (33 FR 17804, November 28, 1968), as amended; 42 U.S.C. 4001-4128; and Secretary's delegation of authority to Federal Insurance Administrator, 34 FR 2680, February 27, 1969, as amended by 39 FR 2787, January 24, 1974.)

Issued: July 28, 1977.

PATRICIA ROBERTS HARRIS,  
Secretary.

**PART 1920—PROCEDURE FOR MAP CORRECTION**

**Letter of Map Amendment for the Town of Easton, Mass.**

**AGENCY:** Federal Insurance Administration, HUD.

**ACTION:** Final rule.

**SUMMARY:** On December 8, 1976, the Federal Insurance Administrator published a list of communities for which the Federal Insurance Administration (FIA) published maps identifying Special Flood Hazard Areas. This list included the Town of Easton, Mass. It has been determined by FIA, after further technical re-

view of the Flood Hazard Boundary Map for the Town of Easton, Mass., in light of additional, recently acquired flood information, that certain property (described below) is not within the Special Flood Hazard Area.

This map amendment, by establishing that the subject property is not within the Special Flood Hazard area, removes the requirement to purchase flood insurance for that property as a condition of Federal or Federally-related financial assistance for construction or acquisition purposes.

**EFFECTIVE DATE:** Date of this notice.

**FOR FURTHER INFORMATION CONTACT:**

[Docket No. FI-2291]

**PART 1920—PROCEDURE FOR MAP CORRECTION****Letter of Map Amendment for the City of Grand Island, Nebr.**

AGENCY: Federal Insurance Administration, HUD.

ACTION: Final rule.

**SUMMARY:** On September 10, 1976, the Federal Insurance Administrator published a list of communities for which the Federal Insurance Administration (FIA) published maps identifying Special Flood Hazard Areas. This list included the City of Grand Island, Nebr. It has been determined by FIA, after further technical review of the Flood Hazard Boundary Map for the City of Grand Island, Nebr., in light of additional, recently acquired flood information, that certain property (described below) is not within the Special Flood Hazard Area.

This map amendment, by establishing that the subject property is not within the Special Flood Hazard area, removes the requirement to purchase flood insurance for that property as a condition of Federal or Federally related financial assistance for construction or acquisition purposes.

**EFFECTIVE DATE:** Date of this notice.  
**FOR FURTHER INFORMATION CONTACT:**

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, 202-755-5581 or toll free line 800-424-8872, Room 5270, 451 Seventh Street SW., Washington, D.C. 20410.

**SUPPLEMENTARY INFORMATION:** If a property owner was required to purchase flood insurance as a condition of Federal or Federally related financial assistance for construction or acquisition purposes, and the lender now agrees to waive the property owner from maintaining flood insurance coverage on the basis of this map amendment, the property owner may obtain a full refund of the premium paid for the current policy year, provided that no claim is pending or has been paid on the policy in question during the same policy year. The premium refund may be obtained from the National Flood Insurers Association (NFIA) through the agent or broker who sold the policy.

The text reads as follows:

**§ 1920.7 Notice of Letter of Map Amendment.**

Map No. H 310103A Panel 08, published on September 10, 1976 in 41 FR 38500, indicates that Lots 3 through 6, O'Neill Second Subdivision, Grand Island, Nebr., as recorded in Book 104-B, Page 29, in the office of the Clerk of Hall County, Nebr., are within the Special Flood Hazard Area.

Map No. H 310103A Panel 08 is hereby corrected to reflect that the existing structures on Lots 3, 4, and 6 and the

southernmost structure on Lot 5 are not within the Special Flood Hazard Area identified on April 5, 1974.

(National Flood Insurance Act of 1968 (Title XIII of Housing and Urban Development Act of 1968), effective January 28, 1969 (33 FR 17804, November 28, 1968), as amended; 42 U.S.C. 4001-4128; and Secretary's delegation of authority to Federal Insurance Administrator, 34 FR 2680, February 27, 1969, as amended (39 FR 2787, January 24, 1974).)

Issued: August 30, 1977.

[Docket No. FI-106]

**PART 1920—PROCEDURE FOR MAP CORRECTION****Letter of Map Amendment for the Village of Ridgewood, N.J.**

AGENCY: Federal Insurance Administration, HUD.

ACTION: Final rule.

**SUMMARY:** On August 24, 1973, the Federal Insurance Administrator published a list of communities for which the Federal Insurance Administration (FIA) published maps identifying Special Flood Hazard Areas. This list included the village of Ridgewood, N.J. It has been determined by FIA, after further technical review of the Flood Hazard Boundary Map for the village of Ridgewood, N.J., in light of additional, recently acquired flood information, that certain property (described below) is not within the Special Flood Hazard Area.

This map amendment, by establishing that the subject property is not within the Special Flood Hazard Area, removes the requirement to purchase flood insurance for that property as a condition of Federal or Federally-related financial assistance for construction or acquisition purposes.

**EFFECTIVE DATE:** Date of this notice.  
**FOR FURTHER INFORMATION CONTACT:**

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, 202-755-5581 or toll free line 800-424-8872, Room 5270, 451 Seventh Street SW., Washington, D.C. 20410.

**SUPPLEMENTARY INFORMATION:** If a property owner was required to purchase flood insurance as a condition of Federal or Federally related financial assistance for construction or acquisition purposes, and the lender now agrees to waive the property owner from maintaining flood insurance coverage on the basis of this map amendment, the property owner may obtain a full refund of the premium paid for the current policy year, provided that no claim is pending or has been paid on the policy in question during the same policy year. The pre-

mium refund may be obtained from the National Flood Insurers Association (NFIA) through the agent or broker who sold the policy.

The text reads as follows:

**§ 1920.7 Notice of letter of map amendment.**

Map No. H 340067 Panels 01 and 03, published on August 24, 1973 in 38 FR 22776, indicates that Lot 8, Block 3104, at 468 Van Buren Street, Ridgewood, N.J., as shown on the County Tax Map, is not within the Special Flood Hazard Area. This property is recorded as Lots 33, 34, and 35 in section 1, in Book 5556, Page 140, in the office of the Clerk of Bergen County, N.J.

Map No. H 340067 Panels 01 and 03 are hereby corrected to reflect the above property would be partially inundated by a flood having a one percent chance of occurrence in any given year, but that the existing structure on the property is not within the Special Flood Hazard Area.

(National Flood Insurance Act of 1968 (Title XIII of Housing and Urban Development Act of 1968), effective January 28, 1969 (33 FR 17804, November 28, 1968), as amended; 42 U.S.C. 4001-4128; and Secretary's delegation of authority to Federal Insurance Administrator, 34 FR 2680, February 27, 1969, as amended (39 FR 2787, January 24, 1974).)

#### [ 4210-01 ]

[Docket No. FI-440]

#### PART 1920—PROCEDURE FOR MAP CORRECTION

##### Letter of Map Amendment for Houston, Tex.

AGENCY: Federal Insurance Administration, HUD.

ACTION: Final rule.

SUMMARY: On December 27, 1974, the Federal Insurance Administrator published a list of communities for which the Federal Insurance Administration (FIA) published maps identifying Special Flood Hazard Areas. This list included Houston, Texas. It has been de-

termined by FIA, after further technical review of the Flood Hazard Boundary map for the city of Houston, in light of additional, recently acquired flood information, that certain property (described below) is not within the Special Flood Hazard Area. This map amendment, by establishing that the subject property is not within the Special Flood Hazard Area, removes the requirement to purchase flood insurance for that property as a condition of Federal or Federally related financial assistance for construction or acquisition purposes.

EFFECTIVE DATE: Date of this notice.

FOR FURTHER INFORMATION CONTACT:

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, (202-755-5581), or toll free line (800-424-8872), Room 5270, 451 Seventh St., SW., Washington, D.C. 20410.

SUPPLEMENTARY INFORMATION: If a property owner was required to purchase flood insurance as a condition of Federal or Federally related financial assistance for construction or acquisition purposes, and the lender now agrees to waive the property owner from maintaining flood insurance coverage on the basis of this map amendment, the property owner may obtain a full refund of the premium paid for the current policy year, provided that no claim is pending or has been paid on the policy in question during the same policy year. The premium refund may be obtained from the National Flood Insurers Association (NFIA) through the agent or broker who sold the policy.

The text reads as follows:

§ 1920.7 Notice of Letter of Map Amendment.

Map No. H 480296A Panel 138, published on December 27, 1974, in 49 FR 2190, indicates that 7655 Braeswood, Section One (P.U.D.) and Section Two (P.U.D.) Houston, Tex., as recorded in Plat Volume 203, Page 131, and Plat Volume 224, Page 141, respectively, in the Office of the Clerk of the County Court, Houston, Tex., is within the Special Flood Hazard Area.

Map No. H 480296A Panel 138 is hereby corrected to reflect that the above property is not within the Special Flood Hazard Area identified on December 27, 1974.

(National Flood Insurance Act of 1968 (Title XIII of Housing and Urban Development Act of 1968), effective January 28, 1969 (33 FR 17804, November 28, 1968), as amended; 42 U.S.C. 4001-4128; and Secretary's delegation of authority to Federal Insurance Administrator, 34 FR 2680, February 27, 1969, as amended by 39 FR 2787, January 24, 1974.)

Issued: August 30, 1977.

PATRICIA ROBERTS HARRIS,  
Secretary.

#### PART 1920—PROCEDURE FOR MAP CORRECTION

##### Letter of Map Amendment for the City of Levelland, Tex.

AGENCY: Federal Insurance Administration, HUD.

ACTION: Final rule.

SUMMARY: On February 13, 1974, the Federal Insurance Administrator published a list of communities for which the Federal Insurance Administration (FIA) published maps identifying Special Flood Hazard Areas. This list included Levelland, Tex. It has been determined by FIA, after further technical review of the Flood Hazard Boundary map for the City of Levelland, in light of additional, recently acquired flood information, that certain property (described below) is not within the Special Flood Hazard Area. This map amendment, by establishing that the subject property is not within the Special Flood Hazard Area, removes the requirement to purchase flood insurance for that property as a condition of Federal or Federally-related financial assistance for construction or acquisition purposes.

EFFECTIVE DATE: Date of this notice.

FOR FURTHER INFORMATION CONTACT:

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, (202-755-5581), or Toll Free Line (800-424-8872), room 5270, 451 Seventh St., SW., Washington, D.C. 20410.

SUPPLEMENTARY INFORMATION: If a property owner was required to purchase flood insurance as a condition of Federal or Federally-related financial assistance for construction or acquisition purposes, and the lender now agrees to waive the property owner from maintaining flood insurance coverage on the basis of this map amendment, the property owner may obtain a full refund of the premium paid for the current policy year, provided that no claim is pending or has been paid on the policy in question during the same policy year. The premium refund may be obtained from the National Flood Insurers Association (NFIA) through the agent or broker who sold the policy.

The text reads as follows:

§ 1920.7 Notice of letter of map amendment.

Map No. H 480354A Panel 02, published on February 13, 1974, in 39 FR 5500, indicates that a portion of the property described as Tract No. 3 in the Warranty Deed, being on the Northwest side of the intersection of Highway 116 and Eagle Avenue, Levelland, Tex., as recorded in Volume 125, Page 51 of Deed Records, in the Office of the Clerk of the Court of Hockley County, Levelland, Tex., is within the Special Flood Hazard Area.

Map No. H 480354A Panel 02 is hereby corrected to reflect that the existing structure on the above property is not within the Special Flood Hazard Area identified on February 8, 1974.

(National Flood Insurance Act of 1968 (Title XIII of Housing and Urban Development Act of 1968), effective January 28, 1969 (33 FR 17804, November 28, 1968), as amended; 42 U.S.C. 4001-4128; and Secretary's delegation of authority to Federal Insurance Administrator, 34 FR 2680, February 27, 1969, as amended by 39 FR 2787, January 24, 1974.)

Issued: August 30, 1977.

PATRICIA ROBERTS HARRIS,  
Secretary.

[Docket No. FI-257]

#### PART 1920—PROCEDURE FOR MAP CORRECTION

##### Letter of Map Amendment for the City of Plano, Tex.

AGENCY: Federal Insurance Administration, HUD.

ACTION: Final rule.

SUMMARY: On May 6, 1974, the Federal Insurance Administrator published a list of communities for which the Federal Insurance Administration (FIA) published maps identifying Special Flood Hazard Areas. This list included Plano,

Texas. It has been determined by FIA, after further technical review of the Flood Hazard Boundary map for the City of Plano, in light of additional, recently acquired flood information, that certain property (described below) is not within the Special Flood Hazard Area. This map amendment, by establishing that the subject property is not within the Special Flood Hazard Area, removes the requirement to purchase flood insurance for that property as a condition of Federal or Federally-related financial assistance for construction or acquisition purposes.

EFFECTIVE DATE: Date of this notice.

FOR FURTHER INFORMATION CONTACT:

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, (202-755-5581), or toll free line (800-424-8872), Room 5270, 451 Seventh St. SW., Washington, D.C. 20410.

SUPPLEMENTARY INFORMATION: If a property owner was required to purchase flood insurance as a condition of Federal or Federally-related financial assistance for construction or acquisition purposes, and the lender now agrees to waive the property owner from maintaining flood insurance coverage on the basis of this map amendment, the property owner may obtain a full refund of the premium paid for the current policy year, provided that no claim is pending or has

been paid on the policy in question during the same policy year. The premium refund may be obtained from the National Flood Insurers Association (NFIA) through the agent or broker who sold the policy.

The text reads as follows:

§ 1920.7 Notice of letter of map amendment.

Map No. H 480140 Panel 05, published on May 6, 1974, in 39 FR 15874, indicates that Lots 125 through 134, 166, 179, and 180 and the existing structures on Lots 135 and 136, Woodpark Phase I, Plano, Texas, as recorded in Volume 9, Page 60 of Plats in the Office of Map Plat Records of Collin County, Texas, are within the Special Flood Hazard Area.

Map No. H 480140 Panel 05 is hereby corrected to reflect that the above property, and the existing structures on Lots 135 and 136 of the above property are not within the Special Flood Hazard Area identified on May 10, 1974.

(National Flood Insurance Act of 1968 (Title XIII of Housing and Urban Development Act of 1968), effective January 28, 1969 (33 FR 17804, November 28, 1968), as amended; 42 U.S.C. 4001-4128; and Secretary's delegation of authority to Federal Insurance Administrator, 34 FR 2680, February 27, 1969, as amended by 39 FR 2787, January 24, 1974.)

Issued: July 28, 1977.

### FISHERY PRODUCTS

Clarification and Recodification of  
U.S. Grade Standards

V421190  
SEP 30 77

UMI

## [ 3510-12 ]

## Title 50—Wildlife and Fisheries

## CHAPTER II—NATIONAL MARINE FISHERIES SERVICE NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION DEPARTMENT OF COMMERCE

## SUBCHAPTER G—PROCESSED FISHERY PRODUCTS, PROCESSED PRODUCTS THEREOF, AND CERTAIN OTHER PROCESSED FOOD PRODUCTS

## U.S. STANDARDS FOR GRADES OF FISHERY PRODUCTS

## Recodification and Clarification

AGENCY: National Marine Fisheries Service, Commerce.

ACTION: Final rule.

SUMMARY: The purpose of this rule is to recodify and clarify the Code of Federal Regulations that pertain to U.S. Standards for Grades of Fishery Products. The product quality standards have been reorganized into groups of similar products and new designations have been assigned to these groups.

EFFECTIVE DATE: September 28, 1977.

## FOR FURTHER INFORMATION CONTACT:

James R. Brooker, Seafood Quality and Inspection Division, National Marine Fisheries Service, Washington, D.C. 20235 (202) 634-7458.

SUPPLEMENTARY INFORMATION: On January 11, 1977, a notice was published in the FEDERAL REGISTER (42 FR 2326) relative to recodification of Parts 260 through 279 of Title 50 CFR. New part and subpart designations were identified. The following table indicates these changes.

New Part 50 CFR	Old Part 50 CFR
260 Subpart A.....	260
261 Subpart A.....	275
261 Subpart B.....	271
262 Subpart B.....	285
262 Subpart C.....	268
263 Subpart B.....	267
263 Subpart C.....	274
263 Subpart D.....	284
263 Subpart E.....	269
264 Subpart A.....	262
264 Subpart B (Reserved).....	278
264 Subpart C.....	279
264 Subpart D.....	277
264 Subpart E.....	266
264 Subpart F.....	261
264 Subpart G.....	276
265 Subpart A.....	272
265 Subpart B.....	262
266 Subpart A.....	273
265-279 (Reserved).....	—

Part 260 has been redesignated as Part 260 Subpart A, Inspection and Certification of Establishments and Fishery Products for Human Consumption. The section numbers for Part 260 Subpart A have not changed.

To clarify the recodification, the entire text of all the product quality standards is republished with the redesignated Parts and Subparts, and new section numbers. This republication will facilitate use of these standards, allow easier comparison of similar provisions among like products, and minimize confusion.

It has been determined that this document does not substantially affect any member of the public. Under the administrative procedures provisions in U.S.C. 553, it is found to be impracticable, and contrary to the public interest to delay the effectiveness of this rule until 30 days after publication in the FEDERAL REGISTER in that (1) no substantive rule or change in rule is involved and (2) recodification in the Code of Federal Regulations involves editorial and clarification changes only.

Dated: September 23, 1977.

ROBERT W. SCHONING,  
Director, National Marine  
Fisheries Service.

Accordingly, the U.S. Standards for Grades of Fish and Fishery Products are recodified as follows:

## PART 261—UNITED STATES STANDARDS FOR GRADES OF WHOLE OR DRESSED FISH

## Subpart A—United States Standards for Grades of Whole or Dressed Fish

Sec.	Scope and product description
261.101	Product forms.
261.102	Grades—quality factors
261.103	Determination of grade
261.104	Hygiene.

## Subpart B—United States Standards for Grades of Frozen Headless Dressed Whiting

Sec.	Description of the product
261.151	Grades of frozen headless dressed whiting.
261.152	Determination of the grade
261.161	Definitions and methods of analysis
261.171	Tolerances for certification of officially drawn samples.

AUTHORITY: 7 U.S.C. 1621-1630

## Subpart A—United States Standards for Grades of Whole or Dressed Fish

## § 261.101 Scope and product description.

This standard shall apply to whole or dressed fish, whether fresh or frozen, of any species suitable for use as human food and processed and maintained in accordance with good manufacturing practices.

## § 261.102 Product forms.

- (a) *Types.* (1) Fresh.
- (2) Frozen solid packs; glazed or unglazed.
- (3) Frozen individually; glazed or unglazed.
- (b) *Styles.* (1) Whole.
- (2) Dressed-eviscerated.
- (3) Head-on or headless.
- (4) With or without fins.
- (5) Skin-on scaled or unscaled; semi-skinned (epidermis removed) or skinless.
- (6) Other (as specified).

## § 261.103 Grades—quality factors.

(a) *U.S. Grade A.* Whole or dressed fish shall:

- (1) Possess good flavor and odor and;
- (2) Comply with the limits for defects for U.S. Grade A quality in accordance with § 261.104.

(b) *U.S. Grade B.* Whole or dressed fish shall:

- (1) Possess reasonably good flavor and odor and;

- (2) Comply with the limits for defects for U.S. Grade B quality in accordance with § 261.104.

(c) *Substandard.* Whole or dressed fish does not possess reasonably good flavor and odor and/or exceeds the limits for defects for U.S. Grade B quality in accordance with § 261.104.

## § 261.104 Determination of grade.

(a) *Procedures for grade determination.* The grade shall be determined by sampling in accordance with the sampling plan described in paragraph (b) of this section evaluating odor and flavor in accordance with paragraph (c) of this section examining for defects in accordance with paragraphs (d), (e) and (f) of this section and using the results to assign a grade as described in paragraph (g) of this section.

(b) *Sampling.* The sampling rate of specific lots for all inspections, other than for military procurement, shall be in accordance with the sampling plans contained in Part 260 of this chapter except that the sampling unit is ten (10) fish for fish weighing up to 10 pounds; fish weighing over ten (10) up to fifty (50) pounds—the sample unit shall be five (5) fish. For fish weighing over fifty (50) pounds, the sample unit shall be a minimum of three (3).

(c) *Evaluation of flavor and odor.* (1) Evaluation of the odor on each of the raw fish in the sample unit shall be carried out as follows:

(i) For the examination of small units, break the flesh or thawed sample either with the thumbs or by cutting with a knife in several places. Hold the cut or broken flesh close to the nose for evaluation.

(ii) For the examination of large units, a core may be used. Drill a hole into the hard frozen fish with a high-speed quarter inch drill. As soon as the drill is withdrawn, the hole and drillings are smelled.

(2) If the results of the raw odor evaluation indicate the existence of any off-odors, the sample shall be cooked by any of the methods set forth below to verify the flavor and odor.

(i) *Boil in bag method.* Insert the sample into a boilable film-type pouch; fold the open end of the pouch over a suspension bar and clamp in place to provide a loose seal after evacuating the air by immersing the pouch into boiling water. Cook the contents for 20 minutes (until the internal temperature of the product reaches 160 degrees F.).

(ii) *Steam method.* Wrap the sample in a single layer of aluminum foil, and place on a wire rack suspended over boiling water in a covered container. Steam the packaged product for 20 minutes.

(iii) *Bake method.* Package the product as previously described. Place the packaged product on a flat cookie sheet or shallow flat-bottom pan of sufficient size so that the packages can be evenly spread on the sheet or pan. Place the pan and frozen contents in a properly ven-

tilated oven preheated to 400 degrees F. for 20 minutes.

(3) The amount of material to be cooked shall be based on the results of the raw odor evaluation. A minimum of 25 percent of the sample except that not less than 3 sample units shall be used.

(d) *Examination for physical defects.* Each of the fish in the sample will be examined for defects using the list of defect definitions, and the defects noted and categorized as minor, major, and serious in accordance with Table 1.

(e) *Definitions of defects in whole or dressed fish.* (1) "Abnormal condition" means that the normal physical and/or chemical structure of the fish flesh has been sufficiently changed so that the usability and/or desirability of the fish is adversely affected. It includes, but is not limited to, the following examples:

(i) *Jellied*—refers to the abnormal condition wherein a fish is partly or wholly characterized by a gelatinous, glossy, translucent appearance.

(ii) *Milky*—refers to the abnormal condition wherein a fish is partly or wholly characterized by a milky-white, excessively mush, pasty, or fluidized appearance.

(iii) *Chalky*—refers to an abnormal condition wherein a fish is partly or wholly characterized by a dry, chalky, granular appearance, and fiberless structure.

(A) *Moderate*—refers to a condition that is distinctly noticeable but does not seriously affect the appearance, desirability and/or the eating quality of the product.

(B) *Excessive*—refers to a condition which is both distinctly noticeable and seriously objectionable.

(2) "Appearance defects" shall refer to the overall general appearance of the fish (consistency of the flesh, odor, eyes, gills, and skin) and presence of excessive blood or drip and appearance of the package.

(i) *Slight*—refers to an appearance defect that is slightly noticeable but does not seriously affect the appearance, desirability, and/or eating quality of the fish.

(ii) *Moderate*—refers to an appearance defect that is conspicuously noticeable but does not seriously affect the appearance, desirability, and/or eating quality of the fish.

(iii) *Excessive*—refers to an appearance defect that is conspicuously noticeable and that does seriously affect the appearance, desirability and/or eating quality of the fish.

(3) "Discoloration" refers to any color not characteristic of the species used.

(i) *Slight*—refers to the area affected by discoloration of significant intensity involving up to 10 percent of the total area.

(ii) *Moderate*—refers to the area affected by discoloration of significant intensity involving over 10 percent and up to 50 percent of the total area.

(iii) *Excessive*—refers to the area affected by discoloration of significant intensity involving over 50 percent of the total area.

(4) "Dehydration" refers to loss of moisture from fish surfaces during frozen storage. For skin-on fish, dehydration shall be evaluated by degree of dullness and shrinkage.

(i) *Slight dehydration*—is surface color masking affecting more than 3 percent of the area which can be readily removed by scraping with a blunt instrument.

(ii) *Moderate dehydration*—is deep color masking penetrating the flesh, affecting less than 3 percent of the area, and requiring a knife or other sharp instrument to remove.

(iii) *Excessive dehydration*—is deep color masking penetrating the flesh, affecting more than 3 percent of the area, and requiring a knife or other sharp instrument to remove.

(5) "Surface defects" shall refer to the following where applicable:

(i) *Scales.* An occurrence of attached or loose scales in any sample unit (where applicable).

(ii) *Blood spot.* An accumulation of coagulated opaque, masses of blood on a fish.

(iii) *Fins or pieces of fin.* An occurrence or absence of attached or loose fins or pieces of fin in any sample unit (where applicable). Dorsal spine shall be removed (where applicable).

(iv) *Skin.* The presence of the dark or light inner layers of skin for skinless. For semiskinned, reference is to the presence of the dark outside layers.

(v) *Bruises.* An accumulation of damaged portions of fish muscle, red and opaque in appearance (on a fish).

(vi) *Damage to protective coating* refers to voids in ice-glaze or tears in covering membrane, also to breaks or splits in the skin which are readily discernible and not normally part of the processing.

(6) "Cutting and trimming defects" refers to the following:

(i) *Body cavity cuts*—refers to misplaced cuts made during evisceration.

(ii) *Improper heading* (as specified)—refers to the presence of pieces of gills, gill cover, pectoral fins (spine), or collarbone after the fish have been headed. No ragged cuts should be evident after heading.

(iii) *Evisceration defects*—refers to inadequate cleaning of the belly cavity of the fish. All viscera, kidney (where applicable), spawn, and blood should be removed.

(A) *Slight degree of improper evisceration and improper heading* refers to a condition that is scarcely noticeable but does not affect the appearance, desirability, and/or eating quality of the fish.

(B) *Moderate degree of improper evisceration and improper heading* refers to a condition that is conspicuously noticeable but does not seriously affect the appearance, desirability, and/or eating quality of the fish.

(C) *Excessive degree of improper evisceration* refers to a condition that is conspicuously noticeable and that seriously affect the appearance, desirability, and/or eating quality of the fish.

(iv) *Improper washing*—inadequate removal of slime, blood, and bits of viscera from the surface of the fish and from the body cavity.

(v) *Belly burn*—an enzymatic action on the flesh causing a burned or discolored appearance.

(7) "Texture defects" texture of the cooked fish; not characteristic of the species.

(i) *Slight*—fairly firm, only slightly tough or rubbery, does not form a fibrous mass in the mouth, moist but not mushy.

(ii) *Moderate*—moderately tough or rubbery, has noticeable tendency to form a fibrous mass in the mouth, moist but not mushy.

(iii) *Excessive*—excessively tough or rubbery, has marked tendency to form a fibrous mass in the mouth, or is very dry or very mushy.

(f) *Categorization of physical defects.*

TABLE 1

Types	Physical defects	Degree	Categories		
			Minor	Major	Serious
Abnormal condition.....	Moderate.....			201	301
	Excessive.....				
Appearance defects.....	Slight.....		102	202	
	Moderate.....				302
	Excessive.....				
Discoloration.....	Slight.....		103	203	303
	Moderate.....				
	Excessive.....				
Dehydration.....	Slight—more than 3 percent area affected and easily removed.....		104		
	Moderate—less than 3 percent area affected but difficult to remove.....			204	
	Excessive—greater than 3 percent area affected.....				304
Surface defects.....	Slight—5 to 10 percent area affected.....		105		
	Moderate—greater than 10 percent area affected.....			205	
Cutting and trimming defects.....	Body cavity cuts.....		106		
	Improper heading.....				
	Slight.....		107		
	Moderate.....			206	
	Evisceration defects.....				
	Slight.....		108		
	Moderate.....			207	
	Excessive.....				305
	Improper washing.....		109		
	Belly burn.....			208	
Texture defects.....	Slight.....		110		
	Moderate.....			209	
	Excessive.....				306

NOTE.—The code numbers shown in the above table are for identification of defects for recording purposes only and are keyed to the nature and severity of the defect. They are not scores.

(g) **Grade assignment.** (1) Each fish in a sample unit will be assigned the grade into which it falls in accordance with the limits for defects, summarized as follows:

Flavor and odor		Maximum number of physical defects permitted		
		Minor	Major	Serious
Grade A....	Good.....	3	0	
Grade B....	Reasonably good..	5	1	

(2) Upon determination of grade of each fish in each sample unit, the sample will be designated a grade as follows:

(i) **Grade A.**

Number of subsample units (fish)	Minimum number of grade A fish	Maximum number of grade B fish	Maximum number of substandard
10 (up to 10 lb.).....	8	2	0
5 (10-50 lb.).....	4	1	0
3 (over 50 lb.).....	3	0	0

(ii) **Grade B.**

Number of subsample units (fish)	Minimum number of grade B fish	Maximum number of substandard
10 (up to 10 lb.).....	8	2
5 (10-50 lb.).....	4	1
3 (over 50 lb.).....	3	0

(iii) **Substandard.** Any fish not meeting the minimum requirements for Grade B quality.

(3) Upon determination of the grade for each sample unit a lot of whole or dressed fish shall be assigned that grade in which:

(i) For physical defects, the number of sample units in the next lower grade does not exceed the acceptance number for deviants prescribed in Part 260.61 of the sampling plan, Table II, of Title 50; and

(ii) Not more than 5 percent of the fish in the sample (total fish examined per lot) are in the next lower grade for odor and/or flavor.

**Note:** Sampling for inspection for military procurement shall be in accordance with MIL-STD-105. Lot size shall be expressed in terms of pounds. The sample size shall be in accordance with Inspection Level S-3. Acceptable Quality Levels shall be expressed in terms of defects per hundred units. The AQL's shall be 6.5 for minor and 4.0 for major.

§ 261.105 **Hygiene.**

Whole or dressed fish shall be processed and maintained in accordance with the applicable requirements of the regulations contained in §§ 260.96 to 260.103 of this chapter and of the good manufacturing practice regulations contained in 21 CFR Part 128.

**Subpart B—United States Standards for Grades of Frozen Headless Dressed Whiting**

§ 261.151 **Description of the product.**

The product described in this part consists of clean, wholesome whiting (silver hake) *merluccius bilinearis*, *merluccius*

*albidus*; completely and cleanly headed and adequately eviscerated. The fish are packaged and frozen in accordance with good commercial practice and are maintained at temperatures necessary for the preservation of the product.

§ 261.152 **Grades of frozen headless dressed whiting.**

(a) "U.S. Grade A" is the quality of frozen headless dressed whiting that (1) possess a good flavor and odor and that (2) for those factors that are rated in accordance with the scoring system outlined in this part, have a total score of 85 to 100 points.

(b) "U.S. Grade B" is the quality of frozen headless dressed whiting that (1) possess at least reasonably good flavor and odor and that (2) rate a total score of not less than 70 points for those factors of quality that are rated in accordance with the scoring system outlined in this part.

(c) "Substandard" or "Utility" is the quality of frozen headless dressed whiting that meet the requirements of § 261.151 but that otherwise fail to meet the requirements of "U.S. Grade B."

§ 261.161 **Determination of the grade.**

In a plant under USDC Contract Inspection the grade is determined by

examining the product for factors 1-10 in the thawed state and factor 11 in the cooked state. For lot inspection, examination of the product for factors 1, 2, and 3 is carried out in the frozen state and 4-10 in the thawed state. Factor 11 is examined in the cooked state.

(a) **Factors rated by score points.** Points are deducted for variations in the quality of each factor in accordance with the schedule in Table 1. The total of points deducted is subtracted from 100 to obtain the score. The maximum score is 100; the minimum score is 0.

(b) **Factors not rated by score points.** The factor of "flavor and odor" is evaluated organoleptically by smelling and tasting after the product has been cooked in accordance with § 261.171.

(1) Good flavor and odor (essential requirements for a U.S. Grade A product, means that the cooked product has the typical flavor and odor of the species and is free from rancidity, bitterness, staleness, and off-flavors and off-odors of any kind.

(2) Reasonably good flavor and odor (minimum requirements of a U.S. Grade B product) means that the cooked product is lacking in good flavor and odor, but is free from objectionable off-flavors and off-odors of any kind.

TABLE 1.—SCHEDULE OF POINT DEDUCTIONS PER SAMPLE  
FROZEN STATE (LOT INSPECTION ONLY)

Factors scored	Method of determining score	Deduct
1 Arrangement of product <sup>1</sup> .....	Small degree: 10 percent of fish twisted or bellies and backs not facing the same direction. Large degree: More than 10 percent of fish twisted, void present or some fish cross packed.	2 4
2 Condition of packaging (overall assessment).....	Poor: Packaging material has been soaked, softened or deteriorated.	2
3 Dehydration.....	Small degree: Slight dehydration of the exposed surfaces..... Large degree: Deep dehydration of the exposed surfaces.....	2 5

THAWED STATE

Factors scored	Method of determining score	Deduct
4 Minimum size: Fish 2 oz. or over are of acceptable size.....	Number of fish less than 2 oz. per lb. Over 0—not over 0.5..... Over 0.5—not over 1.0..... Over 1.0—not over 2.0..... Over 2.0.....	5 10 20 30
5 Uniformity: Weight ratio of fish remaining. The 10 percent largest fish divided by the 10 percent smallest fish. <sup>1</sup>	Weight ratio 10 percent smallest and 10 percent largest: Over 2.0—not over 2.4..... Over 2.4—not over 2.8..... Over 2.8—not over 3.2..... Over 3.2—not over 3.6..... Over 3.6.....	2 4 6 10 20
6 Heading <sup>1</sup> .....	Small degree: 10 percent of fish carelessly cut..... Moderate degree: Over 10 percent of fish carelessly cut.....	5 15
7 Evisceration (overall assessment).....	Small degree: Slight evidence of viscera..... Moderate degree: Moderate amounts of viscera, spawn, etc..... Large degree: Large amounts of viscera, spawn, etc.....	2 10 20
8 Scaling <sup>1</sup> .....	Small degree: 10 percent of fish not well scaled..... Large degree: Over 10 percent of fish not well scaled.....	2 5
9 Color of the exposed surfaces (overall assessment).....	Small degree: Minor darkening, dulling..... Large degree: Objectionably dark, brown, dull.....	2 5
10 Bruises and split or broken skin.....	Presence of bruises and/or broken or split skin per pound: Over 0—not over 0.5..... Over 0.5—not over 1.0..... Over 1.0—not over 1.5..... Over 1.5—not over 2.0..... Over 2.0.....	1 2 4 7 10
11 Texture: (overall assessment).....	Small degree: Moderately dry, tough, mushy, rubbery, watery, stringy. Large degree: Excessively dry, tough, mushy, rubbery, watery, stringy.	5 15

<sup>1</sup> 10 percent of fish refers to 10 percent by count rounded to nearest whole fish.

§ 261.171 **Definitions and methods of analysis.**

(a) **Selection of the sample unit.** The sample unit consists of the primary container and its entire contents. The whiting are examined according to Table 1. Definitions of factors for point deductions are as follows:

(b) **Examination of sample, frozen state.** When this product is examined under USDC Contract Inspection, the samples are examined for factors 1, 2, and 3 in Table 1 in the thawed state. When the product is lot inspected, the samples are examined for factors 1, 2, and 3 in Table 1 in the frozen state.

(1) "Arrangement of product" refers to the packing of the product in a symmetrical manner, bellies or backs all facing in the same direction, fish neatly dovetailed.

(2) "Condition of the packaging material" refers to the condition of the cardboard or other packaging material of the primary container. If the fish is allowed to stand after packing and prior to freezing moisture from the fish will soak into the packaging material and cause deterioration of that material.

(3) "Dehydration" refers to the presence of dehydrated (water-removed) tissue on the exposed surfaces of the whiting. Slight dehydration is surface dehydration which is not color-masking. Deep dehydration is color-masking and cannot be removed by scraping with a fingernail.

(c) **Examination of sample, thawed state.** Thawed state means the state of the product after being thawed. Thawing the sample is best accomplished by enclosing the sample in a film type bag and immersing in an agitated water bath held at 68° F., ±2° F. Allow the product to remain immersed until thawed. Alternatively when the facilities are lacking for water thawing, the sample may be thawed by slacking it out at a temperature between 30° to 40° F. on an aluminum tray from 2 hours for a 1½-pound sample to 8 hours for a 10-pound sample.

(1) "Minimum size" refers to the size of the individual fish in the sample. Fish 2 ounces or over are considered acceptable. Smaller fish cannot be cooked uniformly with acceptable size fish. Separate the fish of unacceptable size, divide their number by the weight of the sample in pounds, and apply to Table 1. Example—four fish of unacceptable size in a 5-pound package is ⅘ = 0.8, a 10 point deduction.

(2) "Uniformity." From the fish remaining, select by count 10 percent (minimum of one fish) of the largest and 10 percent (minimum of one fish) of the smallest and divide the largest weight by the smallest weight to get a weight ratio.

(3) "Heading" refers to the condition of the fish after they have been headed. The fish should be cleanly headed behind the gills and pectoral fins. No gills, gill bones, or pectoral fins should remain after the fish have been headed.

(4) "Evisceration" refers to the cleaning of the belly cavities of the fish. All spawn, viscera, and belly strings should be removed.

(5) "Scaling" refers to the satisfactory removal of scales from the fish.

(6) "Color of the cut surfaces" refers to the color of the cut surfaces of the fish after heading and other processing.

(7) "Bruises and broken or split skin" refers to bruises over one-half square inch in area and splits or breaks in the skin more than one-half inch in length which are not part of the processing.

(d) **Examination of sample, cooked state.** Cooked state means the state of the sample after being cooked. Cooking the sample is best accomplished by inserting the sample into a film type bag and submerging it into boiling water for from 18-20 minutes. A minimum of three fish per sample unit shall be cooked.

(1) "Texture defects" refers to the absence of normal textural properties of the cooked fish flesh, which are tenderness, firmness, and moistness without excess water. Texture defects are dryness, softness, toughness, and rubbery-ness.

(e) **General definitions.**

(1) **Small** (overall assessment) refers to a condition that is noticeable but is only slightly objectionable.

(2) **Moderate** (overall assessment) refers to a condition that is distinctly noticeable but is not seriously objectionable.

(3) **Large** (overall assessment) refers to a condition which is both distinctly noticeable and seriously objectionable.

§ 261.175 **Tolerances for certification of officially drawn samples.**

The sample rate and grades of specific lots shall be certified in accordance with Part 260 Subpart A of this chapter. (Regulations Governing Processed Fishery Products.)

AUTHORITY: 7 U.S.C. 1621-1630.

**Subpart A—[Reserved]**

**Subpart B—United States Standards for Grades of Frozen Halibut Steaks**

§ 262.151 **Product description.**

Frozen halibut steaks are clean, wholesome units of frozen raw fish flesh with normally associated skin and bone and are 2 ounces of more in weight. Each steak has two parallel surfaces and is derived from whole or subdivided halibut slices of uniform thickness which result from sawing or cutting perpendicularly to the axial length, or backbone, of a whole halibut. The steaks are prepared from either frozen or unfrozen halibut (*Hippoglossus* spp.) and are processed and frozen in accordance with good commercial practice and are maintained at temperatures necessary for the preservation of the product.

§ 262.152 **Styles.**

(a) **Style I, random weight pack.** The individual steaks are of random weight and neither the weight nor the range of weights are specified.

(b) **Style II, uniform weight or portion pack.** All steaks in the package or in the lot are of a specified weight or range of weights.

§ 262.153 **Grades.**

(a) "U.S. Grade A" is the quality of frozen halibut steaks which possess good flavor and odor, and that for those factors which are rated in accordance with the scoring system outlined in the following sections the total score is not less than 85 points.

(b) "U.S. Grade B" is the quality of frozen halibut steaks which possess at least reasonably good flavor and odor, and that for those factors which are rated in accordance with the scoring system outlined in the following sections the total score is not less than 70 points.

(c) "Substandard" is the quality of frozen halibut steaks which fail to meet the requirements of the "U.S. Grade B."

§ 262.156 **Recommended dimensions.**

(a) The recommended dimensions of frozen halibut steaks are not incorporated in the grades of the finished product since dimensions, as such, are not factors of quality for the purpose of these grades. However, the degree of uniformity of thickness among units of the finished product is rated since it is a factor affecting the quality and utility of the product.

(b) It is recommended that the thickness (smallest dimension) of individually frozen halibut steaks be not less than ½ inch and not greater than 1¼ inches.

§ 262.161 **Ascertaining the grade.**

The grade is ascertained by observing the product in the frozen, thawed, and cooked states and is evaluated by consideration of the following:

(1) **Factors rated by score points.** The quality of the product with respect to scored factors is expressed numerically. Cumulative point deductions are

assessed for variations of quality for each factor in accordance with the schedule in Table I, in the frozen, thawed, and cooked states. The total deduction is subtracted from the maximum possible score of 100 to obtain the product score.

(2) *Factors not rated by score points.* The factors of flavor and odor are evaluated organoleptically in the cooked state for both the light and dark meat (surface fat) and are defined as follows:

(i) *Good flavor and odor.* "Good flavor and odor" (essential requirement for Grade A) means that the fish flesh has the good flavor and odor characteristics of halibut, and is free from rancidity and from off-flavors and off-odors.

(ii) *Reasonably good flavor and odor.* "Reasonably good flavor and odor" (minimum requirement for Grade B) means

that the fish flesh may be somewhat lacking in the good flavor and odor characteristic of halibut, is reasonably free of rancidity, and is free from objectionable off-flavors and off-odors.

(iii) *Substandard flavor and odor.* "Substandard flavor and odor" (Substandard grade) means that the flavor and odor fail to meet the requirements of "reasonably good flavor and odor."

(3) *Determination of final product grade.* The final product grade is derived on the basis of both the product score as determined by the "factors rated by score points" and the grade requirements of flavor and odor as defined under "factors not rated by score points." The lower of the two determines the final grade.

TABLE I—SCHEDULE OF POINT DEDUCTIONS FOR FACTORS RATED BY SCORE POINTS<sup>1</sup>

Factor	Description of quality variation	Deduct
Frozen	Per steak	
	1. Dehydration <sup>2</sup> .....	1
	Surface area affected:	
	Less than 1 square inch but obvious.....	2
	1 to 2 square inches.....	3
	Above 2 square inches.....	4
	2. Percentage glaze.....	0
	Over 0.0, not over 0.0 percent by weight of sample unit.....	1
	Over 0.0, not over 0.0.....	2
	Over 0.0, not over 0.0.....	3
Thawed	3. Uniformity of thickness.....	2
	For each 1/8 inch above 1/4 inch variation in steak thickness (maximum total deduction permitted 6 points per sample unit).....	
	4. Uniformity of weight and minimum weight.....	4
	Style I—Random weight.—Use either (a) or (b), whichever gives a greater deduction:	
	(a) For each steak less than 3.0 ounces in weight per sample package.....	1/2
	(b) For each 0.1 ounce below 4.0 ounces in average steak weight per sample.....	2
	Style II—Uniform weight or portions.—For each full 1 percent of the steaks deviating by more than 0.6 ounce from the specified portion weight or the average of the specified portion range (per sample package).....	
	5. Workmanship—Defects of: Cutting, collar bone, loose skin, fine, blood spots, bruises, foreign material, backbone, cartilage, sawdust.....	1
	Excessive.....	2
	(For each defect, per occurrence, per sample package or per 2 pounds for packages over 2 pounds net weight.).....	
Cooked	6. Color defects:.....	
	(Per sample unit).....	
	(a) Discoloration of drip liquor.....	1
	Slight.....	2
	Moderate.....	3
	Excessive.....	
	(b) Discoloration of light meat <sup>3</sup> .....	1
	Slight.....	2
	Moderate.....	3
	Excessive.....	
	(c) Discoloration of dark meat <sup>3</sup> .....	1
	Slight.....	2
	Moderate.....	3
	Excessive.....	
	(d) Non-uniformity of color.....	1
	Slight.....	2
	Moderate.....	3
	Excessive.....	
	7. Honeycombing <sup>3</sup> .....	1/2
	Surface area affected:.....	
	25 to 50 percent.....	1
	51 to 75 percent.....	2
	76 to 100 percent.....	3
	8. Texture defect <sup>3</sup> (tough, dry, fibrous, or watery).....	1
	Slight.....	2
	Moderate.....	3
	Excessive.....	

<sup>1</sup> This schedule of point deductions is based on the examination of sample units composed of: (a) An entire sample package and its contents (for retail sized packages) or (b) a representative subsample consisting of three or more halibut steaks taken from each sample package (for institutional sized packages), except that the entire sample package shall be examined for factor 4.

<sup>2</sup> Point deductions for these factors are based on a 3-steak sample unit. For samples containing other than 3 steaks per sample unit or per package, multiply the results by the correction factor  $\frac{3}{n}$  where n equals the number of steaks.

§ 262.171 Definitions and methods of analysis.

(a) "Percentage glaze" on halibut steak means the percent by weight of frozen coating adhering to the steak surfaces and includes the frost within the package. It is determined by the method described below or by methods giving equivalent results.

(i) *Equipment needed.* (1) Source of cold tap water with aerated faucet.

(ii) Balance accurate to 0.1 gm.; or 0.01 ounce.

(iii) Paper towels.

(iv) Small knife.

(2) *Procedure.* (i) Weigh package in overwrap and all its contents (A).

(ii) Remove steaks and loose frost; weigh dry packaging (B).

(iii) The difference in weight, A-B represents weight of steaks plus glaze (C).

(iv) Remove glaze from halibut steaks.

(a) Adjust tap water to a flow rate of about 3 quarts/min. through an aerated faucet.

(b) Direct 50° to 60° F. tap water onto skin side of steak while gently feeling and rubbing cut surfaces with finger tips (if necessary, temperatures up to 80° F. may be used but require closer control).

(c) When all glaze is removed from cut flesh surface, as evidenced by absence of slick feel to fingers, remove steak from water.

(d) Rapidly remove excess water with single paper towel before it has time to refreeze on the steak, and flick off residual skin glaze by knife or hand.

(e) Repeat steps (b), (c), and (d) on each steak in package or sample unit.

(f) Weigh deglazed halibut steaks (D, actual net weight of sample).

(Steps (a) through (f) of this subdivision are completed within 3 minutes.)

(v) Calculate percentage glaze: Percentage glaze =  $\frac{C-D}{D} \times 100$ .

(b) "Cooked state" means that the thawed product has been cooked in a suitable manner which is defined as being heated submerged in boiling water, unseasoned, and in a boilable film type pouch for 10 minutes. (Steaks over 1 inch in thickness may require 5 additional minutes for heating.)

(c) Uniformity of thickness means that the thickness is substantially the same for one or more steaks within a package or sample unit.

(d) Color defects:

(1) "Discoloration of drip liquor" means that the free liquid which drains from the thawed steaks is discolored with blood residue usually from the dorsal aorta of the halibut.

(2) "Discoloration of light meat" means that the normal flesh color of the main part of the halibut steak has darkened due to deteriorative influences.

(3) "Discoloration of the dark meat" means that the normal color of the surface fat shows increasing degrees of yellowing due to oxidation.

(4) "Nonuniformity of color" refers to noticeable differences in color on a single steak or between adjacent steaks in the same package.

(e) "Dehydration" refers to the appearance of a whitish area on the surface of a steak due to the removal of water or drying of the affected area.

(f) "Honeycombing" refers to the visible appearance of numerous discrete holes or openings of varying size on the steak surface.

(g) "Workmanship defects" refers to appearance defects that were not eliminated during processing and are considered either objectionable or poor commercial practice.

(h) "Texture defect" refers to an undesirable increase in toughness and/or dryness, fibrousness, and watery nature of halibut examined in the cooked state.

§ 262.175 Tolerances for certification of officially drawn samples.

The sample rate and grades of specific lots shall be certified on the basis of Part 260 Subpart A of this chapter. (Regulations Governing Processed Fishery Products.)

Subpart C—United States Standards for Grades of Frozen Salmon Steaks

§ 262.201 Product description.

Frozen salmon steaks are clean, wholesome units of frozen raw fish flesh with normally associated skin and bone and are 2.5 ounces or more in weight. Each steak has two parallel surfaces and is derived from whole or subdivided salmon slices of uniform thickness which result from sawing or cutting dressed salmon perpendicularly to the axial length, or backbone. The steaks are prepared from either frozen or unfrozen salmon (*Oncorhynchus* spp.) and are processed and frozen in accordance with good com-

mercial practice and are maintained at temperatures necessary for the preservation of the product. The steaks in an individual package are prepared from only one species of salmon.

(a) *Species.* Frozen salmon steaks covered by this standard are prepared from salmon of any of the following species:

Silver or coho (*O. kisutch*).  
Chum or keta (*O. keta*).  
King, chinook, or spring (*O. tshawytscha*).  
Red, sockeye (*O. nerka*).  
Pink (*O. gorbuscha*).

§ 262.202 Styles.

(a) *Style I—Random weight pack.* The individual steaks are of random weight and neither the individual steak weight nor the range of weights is specified. The steaks in the lot represent the random distribution cut from the head to tail of a whole dressed salmon.

(b) *Style II—Random weight combination pack.* The individual steaks are of random weight and neither the individual steak weight nor range of weights is specified. The steaks in the lot represent a combination of cuts from selected parts of the whole dressed salmon.

(c) *Style III—Uniform weight or portion pack.* All steaks in the package or in the lot are of a specified weight or range of weights.

§ 262.203 Grades.

(a) "U.S. Grade A" is the quality of frozen salmon steaks that possess good flavor and odor, and that for those factors which are rated in accordance with the scoring system outlined in the following sections the total score is not less than 85 points.

(b) "U.S. Grade B" is the quality of frozen salmon steaks that possess at least reasonably good flavor and odor, and that for those factors which are rated in accordance with the scoring system outlined in the following sections the total score is not less than 70 points.

(c) "Substandard" is the quality of frozen salmon steaks that fail to meet the requirements of the "U.S. Grade B."

§ 262.206 Recommended dimensions.

(a) The recommended dimensions of frozen salmon steaks are not incorporated in the grades of the finished product since dimensions, as such, are not factors of quality for the purpose of these grades. However, the degree of uniformity of thickness among units of the finished product is rated since it is a factor affecting the quality and utility of the product.

(b) It is recommended that the thickness (smallest dimension) of individually frozen salmon steaks be not less than 1/2 inch and not greater than 1 1/2 inches.

§ 262.211 Ascertaining the grade.

The grade is ascertained by observing the product in the frozen, thawed, and cooked states and is determined by consideration of the following:

(a) *Factors rated by score points.* The quality of the product with respect to all factors is scored numerically. Cumulative point deductions are assessed for variations of quality for the factors in accordance with the schedule in Table I, in the frozen, thawed, and cooked states. The total deduction is subtracted from the maximum possible score of 100 to obtain the "product score."

(b) *Factors governed by "limiting rule".* The factors of flavor and odor, in addition to being rated by score points, are further considered for compliance with the "limiting rule" grade requirements of flavor and odor in Table I, as defined under Definitions § 262.221 (g) (9).

(c) *Determination of the final product grade.* The final product grade is derived on the basis of both the "product score" and the "limiting rule" grade requirements of flavor and odor, per Table I.

TABLE I—SCHEDULE OF POINT DEDUCTIONS FOR FACTORS RATED BY SCORE POINTS<sup>1</sup>

Scored factors	Description of quality variation	Deduct
FROZEN		
1. General appearance defects.....	Per occurrence:	
	Slight.....	1-2
	Moderate.....	3-4
	Excessive.....	5-10
2. Dehydration.....	(Per occurrence) for each 1 sq. inch of surface area.....	1
3. Uniformity of thickness.....	For each 1/8 inch above 1/4 inch variation tolerance in steak thickness (max. deduction: 6 points).....	2
4. Uniformity of weight and minimum weight.....	Style I & II—Random weight. For each steak between 2.5 and 3.0 ounces in weight per package, or per pound of product for packages over 1 pound net wt.....	4
	Style III—Uniform weight or portion. For each 0.1 ounce beyond the 0.1 ounce tolerance of the specified portion weight range per 5 lbs. of product.....	1
THAWED		
5. Workmanship defects: Blood spots, bruises, cleaning, cutting, fine, foreign material, collar bone, girdle, loose skin, pugh marks, sawdust, scales.....	Per occurrence:	
	Slight.....	1
	Moderate.....	2-3
	Excessive.....	5-6
6. Color defects:		
(a) Discoloration of fatty portion.....	Slight.....	1-2
	Moderate.....	3-4
	Excessive.....	5-10
(b) Discoloration of lean portion.....	Slight.....	1-2
	Moderate.....	3-4
	Excessive.....	5-10
(c) Non-uniformity of color.....	Slight.....	1-2
	Moderate.....	3-4
	Excessive.....	5-6

See footnotes 1 and 2 at end of table.

TABLE I—SCHEDULE OF POINT DEDUCTIONS FOR FACTORS RATED BY SCORE POINTS—Continued

Factor	Description of quality variation	Deduct
7. Honeycombing	Percent sample area affected: 25 to 50..... 51 to 75..... 75 to 100.....	1 2 3
<b>COOKED</b>		
8. Texture defect (tough, dry, fibrous, or watery)	Slight..... Moderate..... Excessive.....	1-2 3-5 6-10
9. Odor	Good (A)..... Reasonably good (B)..... Substandard (S).....	0-2 3-5 6-15
10. Flavor:		
(a) Lean portion	Good (A)..... Reasonably good (B)..... Substandard (S).....	0-2 3-5 6-15
(b) Fatty portion	Good (A)..... Reasonably good (B)..... Substandard (S).....	0-2 3-5 6-15

<sup>1</sup> This schedule of point deductions is based on the examination of sample units composed of: (a) An entire sample package and its contents (for retail sized packages) or (b) a representative subsample consisting of about one pound of salmon steaks taken from each sample package (for institutional sized packages), except that the entire sample package or its equivalent shall be examined for factor 4.

<sup>2</sup> "Limiting rule" grade requirements of flavor and odor: Salmon steaks which received over 5 deduction points for odor, or flavor of the lean, or flavor of the fatty portion, shall not be graded above U.S. Grade B, regardless of the total product score. (This is a "limiting rule" based on flavor and odor as defined under definitions § 262.221(g) (9)).

#### § 262.221 Definitions.

(a) "Slight" refers to a defect that is scarcely noticeable and may not affect the appearance, the desirability, and/or eating quality of the steaks.

(b) "Moderate" refers to a defect that is conspicuously noticeable (not seriously objectionable) and does not seriously affect the appearance, desirability and/or eating quality of the steaks.

(c) "Excessive" refers to a defect that is conspicuously noticeable (seriously objectionable) and seriously affects the appearance, desirability, and/or eating quality of the steaks.

(d) "Occurrence" is defined as each incidence of the same or different types of defects.

(e) "Cooked state" means that the thawed, unseasoned product has been heated within a boilable film-type pouch by immersing the pouch with product in boiling water for 10 minutes. Steaks cooked from the frozen state may require about two additional minutes of cooking.

(f) "Actual net weight" means the weight of the salmon steaks within the package after removal of all packaging material, ice glaze or other protective coatings.

(g) "Scored factors" (Table I):

(1) "General appearance defects" refer to poor arrangement of steaks, distortion of steaks, wide variation in shape, between steaks greater than normal number of head and/or tail pieces, imbedding of packaging material into fish flesh, inside condition of package, frost deposit, excessive or non-uniform skin glaze, and undesirable level of natural color.

(2) "Dehydration" refers to the appearance of a whitish area on the surface of a steak due to the evaporation of water or drying of the affected area.

(3) "Uniformity of thickness" means that steak thickness is within the allowed 1/8-inch manufacturing tolerance between the thickest and thinnest parts of the steaks within a package or sample unit.

(4) "Uniformity of weight and minimum weight" is defined in Table I. (Portions are designated by "weight range" or "specified weight." The "weight range" of portions bearing "specified weight" designation on containers shall be taken as the "specified weight" plus or minus 0.5 ounces unless otherwise specified.)

(5) "Workmanship defects" refers to appearance defects that were not eliminated during processing and are considered objectionable or poor commercial practice. They include the following: Blood spots, bruises, cleaning (refers to inadequate cleaning of the visceral cavity from blood, viscera and loose or attached appendages), cutting (refers to irregular, inadequate, unnecessary, or improper cuts and/or trimmings), fins, foreign material (refers to any loose parts, of fish or other than fish origin), collar bone, girdle (refers to bony structure adjacent to fin), loose skin, pugh marks, sawdust and scales.

(6) "Color defects":

(i) "Discoloration of fat portion" means that the normal color of the fat shows increasing degrees of yellowing due to oxidation.

(ii) "Discoloration of lean portion" means that the normal surface flesh color has faded or changed due to deteriorative influences.

(iii) "Nonuniformity of color" refers to noticeable differences in surface flesh color on a single steak or between adjacent steaks in the same package or sample unit. It would also include color variation of the visceral cavity and skin watermarking.

(7) "Honeycombing" refers to the visible appearance on the steak surface of numerous discrete holes or openings of varying size.

(8) "Texture defect" refers to an undesirable increase in toughness and/or dryness, fibrousness, and watery nature of salmon examined in the cooked state.

(9) "Odor" and "flavor":

(i) "Good flavor and odor" (essential requirement for Grade A) means that the fish flesh has the good flavor and

odor characteristic of the indicated species of salmon, and is free from rancidity and from off-flavors and off-odors.

(ii) "Reasonably good flavor and odor" (minimum requirement for Grade B) means that the fish flesh may be somewhat lacking in the good flavor and odor characteristics of the indicated species of salmon, is reasonably free of rancidity, and is free from objectionable off-flavors and off-odors.

(iii) "Substandard flavor and odor" (substandard grade) means that the flavor and odor fail to meet the requirements of "reasonably good flavor and odor."

#### § 262.225 Tolerances for certification of officially drawn samples.

The sample rate and grades of specific lots shall be certified on the basis of Part 260 Subpart A of this chapter "Regulations Governing Processed Fishery Products."

Authority: 7 U.S.C. 1621-1630.

#### Subpart A—[Reserved]

#### Subpart B—United States Standards for Grades of Cod Fillets

##### § 263.151 Product description.

The product described in this part consists of clean, whole, wholesome fillets or primarily large pieces of clean, whole, wholesome fillets, cut away from either side of cod, *Gadus morhua* or *Gadus macrocephalus*; the fillets may be either skinless or with skin on. They are packaged in accordance with good commercial practice and are maintained at temperatures necessary for the preservation of the product. (This part does not provide for the grading of pieces of fish flesh cut away from previously frozen fish blocks, slabs, or similar products.)

##### § 263.152 Grades of cod fillets.

(a) "U.S. Grade A" is the quality of cod fillets that possess good flavor and odor; and for those factors of quality which are rated in accordance with the scoring system outlined in this part the total score is not less than 85 points.

(b) "U.S. Grade B" is the quality of cod fillets that possess at least reasonably

good flavor and odor; and for those factors of quality which are rated in accordance with the scoring system outlined in this part the total score is not less than 70 points.

(c) "Substandard" is the quality of cod fillets that fail to meet the requirements of U.S. Grade B.

##### § 263.154 Product forms.

(a) Types:  
(1) Fresh.  
(2) Frozen, solid pack; glazed and unglazed.  
(3) Frozen individually; glazed or unglazed.

(b) Styles:

(1) Skin on.

(2) Skinless.

##### § 263.156 Recommended weights and dimensions.

(a) The recommendations as to net weights and dimensions of packaged cod fillets are not incorporated in the grades of the finished product since net weights and dimensions, as such, are not factors of quality for the purpose of these grades.

(b) It is recommended that the net weights of the packaged frozen cod fillets be not less than 12 ounces and not over 10 pounds.

##### § 263.161 Ascertaining the grade.

The grade of cod fillets is ascertained by examining the product in the fresh or frozen, thawed, and cooked states. The following factors of quality are evaluated in ascertaining the grade of the product: Flavor and odor, appearance, size, absence of defects, and character. These factors are rated in the following manner:

(1) *Flavor and odor.* This factor is rated directly by organoleptic evaluation. Score points are not assessed (see § 263.162).

(2) *Appearance, size, absence of defects, and character.* The relative importance of these factors is expressed numerically on the scale of 100. The maximum number of points that may be given each of these factors are:

Factors	Points
Appearance.....	25
Size.....	20
Absence of defects.....	40
Character.....	15
Total possible score.....	100

##### § 263.162 Evaluation of the unscored factor of flavor and odor.

(a) *Good flavor and odor.* "Good flavor and odor" (essential requirement for a Grade A product) means that the fish flesh has good flavor and odor characteristic of cod (*Gadus morhua* or *Gadus macrocephalus*) and is free from staleness, and off-flavor and off-odors of any kind.

(b) *Reasonably good flavor and odor.* "Reasonably good flavor and odor" (minimum requirement of a Grade B product) means that the fish flesh may be somewhat lacking in good flavor and odor; and is free from objectionable off-flavors and off-odors of any kind.

##### § 263.163 Evaluation and rating of the scored factors; appearance, size, absence of defects, and character.

The essential variations in quality within each factor which is scored are so described that the value may be ascertained for each factor and expressed numerically. Point deductions are allotted for each degree or amount of variation within each factor. The net score for each factor is the maximum points for that factor less the sum of the deduction-points within the factor. The total score for the product is the sum of the net scores for the four scored factors.

##### § 263.164 Appearance.

(a) The factor of appearance refers to the normal color of the species of fresh or frozen fish flesh, and to the degree and amount of surface dehydration of the frozen product.

(b) For the purpose of rating the factor of appearance the schedule of deduction-points in Tables I and II apply. Frozen cod fillets which receive 25 deduction points for the factor of appearance shall not be graded above Substandard regardless of the total score for the product. This is a limiting rule.

TABLE I—SCORE DEDUCTIONS FOR DISCOLORATION

Color of product	Deduction points	
	"Light" colored portion comprising main portion of fillet	"Dark" colored portion occurring under skin mainly along lateral line
No discoloration.....	0	0
Slight yellowing.....	1	1
Moderate yellowing.....	2	2
Excessive yellowing and/or any rusting.....	13	12

TABLE II—SCORE DEDUCTIONS FOR DEHYDRATION

Degree of dehydration of frozen product	Surface area affected (percent)		Deduction points
	Over—	Not over—	
Slight—Shallow and not color masking.....	0	1	0
	1	50	2
	50	100	5
Moderate—Deep but just deep enough to easily scrap off with fingernail.....	1	25	5
	25	50	8
	50	100	16
Excessive—Deep dehydration not easily scraped off.....	1	25	12
	25	100	25

##### § 263.165 Size.

(a) The factor of size refers to the degree of freedom from undesirably small fillet pieces. Any fillet piece weighing less than 2 ounces is classed as being undesirably small.

(b) For the purpose of rating the factor of size the schedule of deduction-points in Table III apply. Cod fillets which receive 20 deduction points for this factor shall not be graded above Substandard regardless of the total score for the product. This is a limiting rule.

V 4 2 1 1 9 0 S E P 3 0 7 7

TABLE III—SCORE DEDUCTIONS FOR SIZE OF FILLET PIECES

Number of fillet pieces less than 2 ounces per pound		Deduction points
Over—	Not over—	
0	0	0
1	1	10
2	2	15
3	4	20

## § 263.166 Workmanship defects.

(a) The factor of "workmanship defects" refers to the degree of freedom from improper packing, cutting and trimming imperfections, blemishes, and bones. Evaluation for the defect of improper packing is made on the frozen product. Evaluation of the defects of cutting and trimming, blemishes, and bones are made on the thawed product.

(1) *Improper packing.* "Improper packing" means poor arrangement of fillets, presence of voids, depressions, frost, and the imbedding of packaging material into the frozen fish flesh.

(2) *Cutting and trimming imperfections.* "Cutting and trimming imperfections" means that the fillets have ragged edges, tears, holes, or are otherwise improperly cut or trimmed.

(3) *Blemish.* "Blemish" means an instance of skin (except for skin-on fillets), scales, blood-spot, bruise, black-belly lining, fin, or extraneous material. One "instance of skin" consists of one piece of skin not less than ½ square inch and not more than 1½ square inches in area; each additional ½ square inch area of individual skin pieces greater and 1½ square inches is considered as an additional instance. One "instance of blood spot" is one of such size and prominence as to be considered objectionable. One "instance of black-belly lining" is any piece of black-belly lining not less than ½ inch and not more than 1 inch in length; each additional ½ inch length of individual pieces of black-belly lining longer than 1 inch is considered as an instance. Each aggregate area of identifiable fin or parts of any fin up to 1 square inch is considered as one "instance of fin". Each aggregate area up to 1 square inch per fillet of one scale or group of scales is considered as one "instance of scales". An "instance of bruise" consists of a bruise not less than ½ square inch and not more than 1½ square inches in area; each bruise larger than 1½ square

inches is considered as two instances of bruise.

(4) *Bones.* One "instance of bone" means one bone or one group of bones occupying or contacting a circular area up to 1 square inch.

(b) For the purpose of rating the factor of "absence of defects" the schedule of deduction-points in Table IV apply.

TABLE IV—SCORE DEDUCTIONS FOR WORKMANSHIP DEFECTS

Defects subfactor	Method of determining subfactor score	Deduction points
Improper packing	Moderate defects, noticeably affecting the product's appearance.	2
	Excessive defects, seriously affecting product's appearance.	4
Blemishes	Number of blemishes per 1 lb. of fish flesh:	
	Over 0 not over 1	1
	Over 1 not over 2	3
	Over 2 not over 3	5
	Over 3 not over 4	8
	Over 4 not over 5	12
	Over 5 not over 6	16
	Over 6 not over 7	30
	Over 7	40

Defects subfactor	Method of determining subfactor score	Deduction points
Bones	Number of instances per 1 lb. of fish flesh:	
	Over 0 not over 1	0
	Over 1 not over 2	2
	Over 2 not over 3	4
	Over 3 not over 4	6
	Over 4 not over 5	8
	Over 5 not over 6	14
	Over 6 not over 7	30
	Over 7	40
Cutting and trimming	Slight defects, scarcely noticeable.	0
	Moderate defects, noticeable but not affecting the usability of any fillets.	4
	Excessive defects impairing:	
	(a) the usability of up to ¼ of the total number of fillets.	8
	(b) the usability of over ¼ but not more than ½ of the total number of fillets.	16
	(c) the usability of over ½ of the total number of fillets.	40

## § 263.167 Character

(a) The factor of character refers to the amount of free drip in the thawed fillets, and to the tenderness and moistness of the cooked fish flesh.

(b) For the purpose of rating the factor of character, the schedule of deduction-points in Table V apply. Cod fillets which receive 15 deduction-points for the factor of character shall not be graded above Substandard regardless of the total score for the product. This is a limiting rule.

TABLE V—SCORE DEDUCTIONS FOR CHARACTER

Character subfactors	Method of determining subfactor score	Deduction points
Texture	Texture of the cooked fish:	
	(a) Firm, slightly resilient but not tough or rubbery; moist but not mushy.	0
	(b) Moderately firm; only slightly tough or rubbery; does not form a fibrous mass in the mouth; moist but not mushy.	4
	(c) Moderately tough or rubbery; has noticeable tendency to form a fibrous mass in the mouth; or is dry; or is mushy.	8
	(d) Excessively tough or rubbery; has marked tendency to form a fibrous mass in the mouth; or is very dry; or is very mushy.	15
Drip	Percent of drip:	
	Over 0 not over 6	0
	Over 6 not over 8	1
	Over 8 not over 10	2
	Over 10 not over 12	4
	Over 12 not over 14	6
	Over 14 not over 16	9
	Over 16	15

## § 263.171 Definitions and methods of analysis.

(a) *Percent of drip.* "Percent of drip" means the percent by weight of "free drip" (the fluid which is not reabsorbed by the fish tissue when the frozen fish thaws, and which separates freely without the aid of any external forces except gravity) in an individual package as determined by the following method:

(1) *Apparatus and materials.* (i) Water bath. (ii) Balance, accurate to 0.1 gm; or 0.01 ounce. (iii) Pliable and impermeable bag (cryovac, pifilm, etc.). (iv) Corrosion-resistant metal rod weight (preferably stainless steel or monel metal), measuring 3½ inches in length and approximately ¼-½ inch in diameter.

(v) U.S. Standard No. 8 mesh circular sieve (both 8 and 12 inch diameters).

(vi) Stirring motor.

(vii) Identification tags.

(2) *Procedure.* (i) Place metal rod weight into an empty pliable bag.

(ii) Weigh the bag and the metal weight.

(iii) Remove the frozen fish material from the container (container consists of the carton and the inner and outer wrapping).

(iv) Place the frozen product, plus scraps of any material remaining in the container, into the pliable bag.

(v) Weigh the bag and its contents and subtract tare (empty bag and metal

weight) to determine the net weight of the product.

(vi) Suspend the bag and contents in and agitated water bath maintained at 68° F. plus or minus 2° F. The bag should be suspended in the water so that the fish flesh is below the water line.

(vii) Allow the bag and its contents to remain immersed until the product is defrosted (a "test run", in advance, is necessary to determine time required for each product and quantity of product).<sup>1</sup>

(viii) Remove bag and contents from bath and gently dry outside of bag.

(ix) Weigh dry U.S. Standard No. 8 mesh circular sieve.

(x) Open bag and empty contents onto U.S. Standard No. 8 circular sieve so as to distribute the product evenly, inclining the sieve slightly to facilitate drainage, and allowing to drain for 2 minutes.

(xi) Weigh sieve and its contents and calculate drained weight. The drained weight is the weight of sieve and fillets less the weight of the dry sieve.

(xii) Calculate percent drip:

$$\text{Net weight (v)} - \text{drained weight (xi)} \times (100) \\ \text{Net weight (v)} \\ = \text{Percent of drip}$$

(b) *Cooking in a suitable manner.* "Cooking in a suitable manner" shall mean that the product is cooked as follows: Place the thawed unseasoned product into a boilable film-type pouch; fold the open end of the pouch over the suspension bar and clamp in place to provide a loose seal. Immerse the pouch and its contents in boiling water and cook until the internal temperature of the fillets reaches 160° F. (about 20 minutes).

§ 263.175 Tolerances for certification of officially drawn samples.

The sample rate and grades of specific lots shall be certified in accordance with Part 260 Subpart A of this chapter. (Regulations Governing Processed Fishery Products.)

## SCORE SHEET

## § 263.181 Score sheet for cod fillets.

Label: \_\_\_\_\_  
 Size and kind of container: \_\_\_\_\_  
 Container mark or identification: \_\_\_\_\_  
 Size of lot: \_\_\_\_\_  
 Number of packages per master carton: \_\_\_\_\_  
 Size of sample: \_\_\_\_\_  
 Type of overwrap: \_\_\_\_\_  
 Actual net weight: \_\_\_\_\_ (lb.) \_\_\_\_\_ (kg.)

Factor	Score points	Sample score
Appearance	25	
Size	20	
Absence of defects	40	
Character	15	
Total	100	

Flavor and odor: \_\_\_\_\_  
 Final grade: \_\_\_\_\_

<sup>1</sup> The purpose of the "test run" is to determine the time necessary to thaw the product. The complete thawing of the product is determined by frequent but gentle squeezing of the bag until no hard core or ice crystals are felt. This package which has been squeezed cannot be used for drained weight calculations.

## Subpart C—United States Standards for Grades of Flounder and Sole Fillets

## § 263.201 Description of the product.

Frozen flounder and sole fillets consist of clean, wholesome fillets processed and frozen in accordance with good commercial practice and maintained at temperatures necessary for their preservation. The fillets may be cut transversely or longitudinally into subunits.

NOTE: This standard does not provide for the grading of units of fish flesh cut from previously frozen fish blocks, slabs, or similar material.

The product covered by this standard is prepared from the following species only:

## SOLE

Dover sole (*Microstomus pacificus*).  
 English sole (*Parophrys vetulus*).  
 Gray sole (*Glyptocephalus cynoglossus*).  
 Petrale sole (*Eopsetta jordani*).  
 Lemon sole (*Pseudopleuronectes americanus*, over 3½ pounds).  
 Rock sole (*Lepidopsetta bilineata*).  
 Sand sole (*Psettichthys melanostictus*).

## FLOUNDER

Blackback (*Pseudopleuronectes americanus*, less than 3½ pounds).  
 Yellowtail flounder (*Limanda ferruginea*).  
 Dab, plaice (*Hippoglossoides platessoides*).  
 Fluke (*Paralichthys dentatus*).  
 Starry flounder (*Platichthys stellatus*).

## § 263.202 Product forms.

- (a) Types:  
 (1) Fresh.  
 (2) Frozen solid packs; glazed or unglazed.  
 (3) Frozen individually; glazed or unglazed.  
 (b) Styles:  
 (1) Skin on.  
 (2) Skin on, white side only.  
 (3) Skinless.

## § 263.203 Grades of frozen flounder and sole fillets.

(a) "U.S. Grade A" is the quality of frozen flounder or sole fillets for which the total score is not less than 85 points, when the fillets are rated in accordance with the scoring system outlined in the following sections.

(b) "U.S. Grade B" is the quality of frozen flounder or sole fillets for which the total score is less than 85 points but is not less than 70 points, when the fillets are rated in accordance with the scoring system outlined in the following sections.

(c) "Substandard" is the quality of frozen flounder or sole fillets that fail to meet the requirements of the U.S. Grade B.

## § 263.211 Determination of the grade.

The grade is determined by observing the product in the frozen, thawed, and cooked states and is evaluated by numerical scoring. Points are deducted for variations of quality for each factor in accordance with the schedule in Table 1. The total of the points deducted is subtracted from 100 to obtain the score. The maximum score is 100; the minimum score is 0.

TABLE I—SCHEDULE OF POINT DEDUCTIONS PER POUND OF FLOUNDER OR SOLE FILLETS AND GRADING SCORE SHEET

	Scored factors	Description of quality variation	Deduct	Deductions
Frozen	1. Appearance.....	Adversely affected by imbedded packaging material, voids, depressions, surface irregularity, and poor arrangements of fillets:	Slight..... Moderate..... Excessive.....	2 4 10
	2. Dehydration.....	For each inch square (determined by grid) of affected area:	Color masking, easily scraped off..... Deep, not easily scraped off.....	1/2 1
Thawed	3. Weights.....	(a) For each fillet or piece less than 1 oz., except first fillet or piece. (b) For sole only: For each fillet from 1-2 oz., except first fillet. For flounder only: For each fillet from 1-2 oz., except first three fillets.	..... ..... .....	4 2 2
	4. Workmanship defects.....	For each inch square (determined by grid) of affected area:	(a) Cutting and trimming (ragged edges, holes, tears, improper or unnecessary cuts and lace). (b) Blemishes (belly lining, blood spots, bruises, extraneous material, fins, discolored pugh marks, scales and skin). (c) Bones normally removed.	1/2 2 3
	5. Color.....	(a) Deteriorative discoloration (yellowing of fatty portion and/or darkening of light portion). (b) Nonuniformity of color (natural color differences within package due to packing fish of contrasting color).	Slight..... Moderate..... Excessive.....	2 5 15
	6. Abnormal condition.....	Usability and/or desirability of fillets impaired by abnormal conditions (jellied, milky, chalky).	Moderate..... Excessive.....	10 21
Cooked	7. Texture.....	Tough, dry, fibrous, or watery for species involved.	Slight..... Moderate..... Excessive.....	4 8 18
	8. Odor and flavor.....	Very good: Full typical odor and flavor of fresh fish. Good: Noticeable decrease in typical odor and flavor of fresh fish. Reasonably good: Lacking typical odor and flavor of fresh fish, but not objectionable. Substandard: Objectionable odor and/or flavor.	..... ..... ..... .....	6 16 31
Total deductions.....

Actual net weight.....lb.....or.....  
Size and kind of container.....  
Container mark or identification.....  
Type of overwrap.....

## § 263.221 Definitions.

(a) "Slight" refers to a condition that is scarcely noticeable but that does affect the appearance, desirability, and/or eating quality of the fillets.

(b) "Moderate" refers to a condition that is conspicuously noticeable but that does not seriously affect the appearance, desirability, and/or eating quality of the fillets.

(c) "Excessive" refers to a condition that is conspicuously noticeable and that does seriously affect the appearance, desirability and/or eating quality of the fillets.

(d) "Bones normally removed" refers to (1) nape membrane bones (adjacent to visceral cavity) and to (2) radial bones (adjacent to fins and lace area).

(e) "Determined by grid" means that a transparent grid of 1-inch squares is placed over the defect area, and points are deducted (as specified in Table I) for each square of affected area under the grid, each square being counted as one whether it is full or fractional.

(f) "Thawed state" means that the frozen product has been placed within a film-type pouch and warmed to an

internal temperature of about 32° F by immersing the pouch in running tap water of about 50° to 70° F. Thawing time usually takes 25 to 45 minutes for a 1-pound package.

(g) "Cooked state" means that the thawed, unseasoned product has been placed within a boilable film-type pouch and heated to an internal temperature of about 160° F by immersing the pouch in boiling water. Cooking time usually ranges from 3 to 5 minutes for single fillets and from 7 to 10 minutes for 1-pound packages of fillets.

(h) "Actual net weight" means the weight of the fish flesh within the package after all packaging material, ice glaze, or other protective coating have been removed. ("Actual net weight" of frozen glazed fillets is determined as follows: (1) Rapidly remove excessive ice layers or pockets with running tap water or nozzle-type water spray. (2) Rapidly thaw remaining surfaces of frozen fish sufficiently with tap water or spray to prevent refreezing free surface water. (3) Gently wipe off all free water with a moisture-saturated paper towel. (4) Weigh the fish to obtain "actual net weight").

(i) "Abnormal condition" means that the normal physical and/or chemical structure of the fish flesh has been sufficiently altered so that the usability and/or desirability of the fillet is adversely affected. It includes, but is not limited to, the following examples:

(1) "Jellied" refers to the abnormal condition wherein a fillet is partly or wholly characterized by a gelatinous glossy, translucent appearance, feels slimy to the touch, and retains its gelatinous, slimy properties in the cooked state.

(2) "Milky" refers to the abnormal condition wherein a fillet is partly or wholly characterized by a milky-white, excessively mushy, pasty, or fluidized appearance.

(3) "Chalky" refers to the abnormal condition wherein a fillet is partly or wholly characterized by a dry, chalky, granular appearance and fiberless structure.

(j) "Odor and flavor" is classified as follows:

(1) "Very good": Fish in this category have essentially the full, good, typical odor, and flavor of the indicated species.

(2) "Good": Fish in this category show a noticeable decrease of the good, typical odor and flavor of the indicated species, and/or may have certain less acceptable natural environmental odors and flavors of slight intensity (iodoform-type, phenolic-type, feed-type, etc.), but may have no off odors and flavors.

(3) "Reasonably good": Fish in this category may be flat, or completely lacking in the good, typical odor and flavor of the indicated species, and/or may have certain less acceptable natural environmental odors and flavors of moderate intensity (iodoform-type, phenolic-type, feed-type, etc.), but may have no objectionable odors and flavors.

(4) "Substandard": Fish in this category have odors and flavors that are objectionable.

§ 263.225 Tolerances for certification of officially drawn samples.

The sample rate and grades of specific lots shall be certified in accordance with Part 260, Subpart A of this chapter, (Regulations Governing Processed Fishery Products.)

Subpart D—United States Standards for Grades of Haddock Fillets

§ 263.231 Product description.

The product described in this part consists of clean, whole, wholesome fillets or primarily large pieces of clean, whole, wholesome fillets, cut away from either side of haddock, *Melanogrammus aeglefinus*; the fillets may be either skinless or with skin on. They are packaged in accordance with good commercial practice and are maintained at temperatures necessary for the preservation of the product. (This part does not provide for the grading of pieces of fish flesh cut away from previously frozen fish blocks, slabs, or similar products.)

§ 263.232 Grades of frozen haddock fillets.

(a) "U.S. Grade A" is the quality of haddock fillets that possess a good flavor and odor; and for those factors which are rated in accordance with the scoring system outlined in this part have a total score of 85 to 100 points.

(b) "U.S. Grade B" is the quality of haddock fillets that possess at least a reasonably good flavor and odor; and for those factors which are rated in accordance with the scoring system outlined in this part have a total score of not less than 70 points: *Provided*, That no factor receives maximum point score deduction.

(c) "Substandard" is the quality of haddock fillets that fail to meet the requirements of U.S. Grade B.

§ 263.251 Product forms.

(a) Types:

(1) Fresh.

(2) Frozen, solid pack; glazed and unglazed.

(3) Frozen individually; glazed or unglazed.

(b) Styles:

(1) Skin on.

(2) Skinless.

§ 263.256 Recommended weights and dimensions.

(a) The recommendations as to net weights and dimensions of packaged haddock fillets are not incorporated in the grades of the finished product since net weights and dimensions, as such, are not factors of quality for the purpose of these grades.

(b) It is recommended that the net weights of the packaged haddock fillets be not less than 12 ounces and not over 10 pounds.

§ 263.261 Ascertaining the grade.

The grade of haddock fillets is ascertained by observing the product in the frozen and thawed states and after representative sample units have been cooked in a suitable manner. The following factors are evaluated in ascertaining the grade of the product: Flavor, odor, appearance, size, defects, and character.

(a) These factors are rated in the following manner:

(1) *Flavor and odor*. These factors are rated by organoleptic examination. Score points are not assessed (see § 263.262).

(2) *Appearance, size, defects, and character*. These factors are rated by score points expressed numerically on the scale of 100.

(b) The four factors and the maximum number of points that may be given each are as follows:

Factors:	Points
Appearance.....	25
Size.....	20
Defects.....	40
Character.....	51
Total score.....	100

§ 263.262 Evaluation of the unscored factor of flavor and odor.

(a) *Good flavor and odor*. "Good flavor and odor" (essential requirement

for a Grade A product) means that the fish flesh has good flavor and odor characteristic of haddock (*Melanogrammus aeglefinus*); and is free from staleness, and off-flavors and off-odors of any kind.

(b) *Reasonably good flavor and odor*. "Reasonably good flavor and odor" (minimum requirement of a Grade B product) means that the fish flesh may be somewhat lacking in good flavor and odor; and is free from objectionable off-flavors and off-odors of any kind.

§ 263.263 Ascertaining the rating for the factors which are scored; appearance, size, workmanship defects, and character.

The essential variations within each factor which is scored are so described that the value may be ascertained for each factor and expressed numerically. Point deductions are allotted for each degree or amount of variation within each factor. The value for each factor is the maximum points allotted for the factor less the sum of the deduction-points within the factor.

§ 263.264 Appearance.

(a) General: The factor of appearance refers to the color of the fish flesh, and to the degree of surface dehydration of the product.

(b) For the purpose of rating the factor of appearance the schedule of deduction-points in Tables I and II apply. Haddock fillets which receive 25 deduction-points for this factor shall not be graded above Substandard regardless of the total score for the product. This is a limiting rule.

TABLE I—SCORE DEDUCTIONS FOR COLOR SUBFACTOR

Color	Deduction points	
	"Light" colored portion comprising main portion of fillet	"Dark" colored portion occurring under skin mainly along lateral line
No discoloration.....	0	0
Slight yellowing.....	2	1
Moderate yellowing.....	4	2
Excessive yellowing and/or any rusting.....	13	12

TABLE II—SCORE DEDUCTIONS FOR DEHYDRATION SUBFACTOR

Degree of dehydration	Surface area affected (percent)		Deduction points
	Over—	Not over—	
Slight—Shallow and not color masking.....	0	1	0
	1	50	1
	50	100	5
Moderate—Deep but just deep enough to easily scrape off with fingernail.....	1	25	5
	25	50	4
	50	100	16
Excessive—Deep dehydration not easily scraped off.....	1	25	12
	25	100	25

§ 263.265 Size.

(a) General: The factor of size refers to the degree of freedom from undesirably small fillet pieces. Any piece weighing less than 2 ounces is classed undesirably small.

(b) For the purpose of rating the factor of size the schedule of deduction-points in Table III apply. Haddock fillets which receive 20 deduction points for this factor shall not be graded above Substandard regardless of the total score for the product. This is a limiting rule.

TABLE III—SCORE DEDUCTIONS FOR SIZE OF FILLET PIECES

Number of fillet pieces less than 2 ounces per pound		Deduction points

0.....	0.....	0
1.....	1.....	1
2.....	2.....	10
3.....	3.....	15
4.....	4.....	20

§ 263.266 Workmanship defects.

(a) General: The factor of workmanship defects refers to the degree of freedom from improper packing, cutting and trimming imperfections, blemishes, and bones.

(1) *Improper packing*. "Improper packing" means poor arrangement of fillets, presence of voids, depressions, frost, and the imbedding of packaging material into fish flesh.

(2) *Cutting and trimming imperfections*. "Cutting and trimming imperfections" means that the fillets have ragged edges, tears, holes, or are otherwise improperly cut or trimmed.

(3) *Blemish*. "Blemish" means a piece of skin (except for skin-on fillets), scales, blood spot, a bruise, a black belly lining, a fin, or extraneous material. One "piece of skin" consists of one piece at least ½ square inch in area; except that any skin patches larger than 1½ square inches are each considered as two pieces of skin. "Blood spot" is one of such size and prominence as to be considered objectionable. "Black belly lining" is any piece longer than ½ inch. Each aggregate area up to 1 square inch of identifiable fin or parts of any fin is considered as one "instance of fin". Each aggregate area up to 1 square inch per fillet of one scale or group of scales is considered one "instance of scales". "A bruise" consists of an affected area of ½ square inch or more in area; except that any bruise larger than 1½ square inches is considered as two bruises.

(4) *Bones*. "Bones" means any bones that can be identified, and are objectionable. One instance of bone means one bone or one group of bones occupying or contacting a circular area of 1 square inch.

(b) For the purpose of rating the factor of freedom from defects, the schedule of deduction-points in Table IV apply.

TABLE IV—SCORE DEDUCTIONS FOR WORKMANSHIP DEFECTS

Defects subfactors	Method of determining sub-factor score	Deduction points
Improper packing.	Moderate defects, noticeably affecting the products appearance.	1
Blemishes	Excessive defects, seriously affecting products appearance. Number of blemishes per 1 lb. of fish flesh:	4
	Over 0 not over 1.....	1
	Over 1 not over 2.....	3
	Over 2 not over 3.....	5
	Over 3 not over 4.....	8
	Over 4 not over 5.....	16
	Over 5 not over 6.....	30
	Over 6.....	40
Bones	Number of instances per 1 lb. of fish flesh:	
	Over 0 not over 1.....	0
	Over 1 not over 2.....	5
	Over 2 not over 3.....	10
	Over 3 not over 4.....	15
	Over 4 not over 5.....	20
	Over 5.....	40
Cutting and trimming.	Slight defects, scarcely noticeable.	0
	Moderate defects, noticeable but not affecting the usability of any fillets.	4
	Excessive defects impairing: (a) the usability of up to ¼ of the total number of fillets.	8
	(b) the usability of over ¼ but not more than ½ of the total number of fillets.	15
	(c) the usability of over ½ of the total number of fillets.	40

## § 263.267 Character.

(a) General: The factor of character refers to the amount of drip in the thawed fillets, and to the tenderness and moistness of the properly cooked fish flesh.

(b) For the purpose of rating the factor of character, the schedule of deduction-points in Table V apply. Haddock fillets which receive 15 deduction points for this factor shall not be graded above Substandard regardless of the total score for the product. This is a limiting rule.

TABLE V—SCORE DEDUCTIONS FOR CHARACTER

Character subfactors	Method of determining sub-factor score	Deduction points
Texture	Texture of the cooked fish:	
	(a) Firm, slightly resilient but not tough or rubbery; moist but not mushy.	0
	(b) Moderately firm; only slightly tough or rubbery; does not form a fibrous mass in the mouth; moist but not mushy.	4
	(c) Moderately tough or rubbery; has noticeable tendency to form a fibrous mass in the mouth; or is dry; or is mushy.	8
	(d) Excessively tough or rubbery; has marked tendency to form a fibrous mass in the mouth; or is very dry; or is very mushy.	15
Amount of drip.	Percent of drip:	
	Over 0 not over 5.....	0
	Over 5 not over 8.....	1
	Over 8 not over 10.....	2
	Over 10 not over 12.....	6
	Over 12 not over 14.....	9
	Over 14 not over 16.....	12
	Over 16.....	15

## § 263.271 Definitions and methods of analysis.

(a) *Percent of drip*. "Percent of drip" means the percent by weight of "free drip" (the fluid which is not reabsorbed by the fish tissue when the frozen fish thaws, and which separates freely without the aid of any external forces except gravity) in an individual package as determined by the following method:

(1) *Apparatus and materials*. (i) Water bath.

(ii) Balance, accurate to 0.1 gm; or 0.01 ounce.

(iii) Pliable and impermeable bag (cryovac, ploffilm, etc.).

(iv) Vacuum source (Vacuum pump or water aspirator).

(v) U.S. Standard No. 8 mesh circular sieve (both 8 and 12 inch diameters).

(vi) Stirring motor.

(vii) Identification tags.

(2) *Procedure*. (i) Weigh pliable and impermeable bag (cryovac, ploffilm, etc.).

(ii) Remove frozen material from container (container consists of the carton and the inner and outer wrappings).

(iii) Place frozen product, plus scraps of any material remaining on the container, into the pliable bag.

(iv) Weight bag and contents and subtract tare to determine the net weight of the product.

(v) Evacuate air from bag by use of suction so that bag closely fits contour of product, with no air pockets.

(vi) Crimp the open end of bag and tie off (a secure and leakproof closure may be created by tying close to product and then folding excess bag and tying again).

(vii) Completely immerse bag and contents in a circulated water bath maintained at 68° F. plus or minus 2° F.

(viii) Allow to remain immersed until the product is defrosted (a "test run", in advance, is necessary to determine time required for each product and quantity of product).

(ix) Remove bag and contents from bath and gently dry outside of bag.

(x) Weigh dry U.S. Standard No. 8 mesh circular sieve.

(xi) Open bag and empty contents onto U.S. Standard No. 8 circular sieve so as to distribute the product evenly, inclining the sieve slightly to facilitate drainage, and allowing to drain for two minutes.

(xii) Weigh sieve and its contents and calculate drained weight. The drained weight is the weight of sieve and fillets less the weight of the dry sieve.

(xiii) Calculate percent drip:

Net weight (iv) - drained weight (xii) × (100)

Net weight

= Percent of drip

(b) *Cooking in a suitable manner*. "Cooking in a suitable manner" shall mean that the product is cooked as follows: Place the thawed unseasoned

product into a boilable film-type pouch. The pouch and its contents are then immersed in boiling water and cooked until the internal temperature of the fillets reaches 160° F. (about 20 minutes).

§ 263.275 Tolerances for certification of officially drawn samples.

The sample rate and grades of specific lots shall be certified in accordance with Part 260 Subpart A of this chapter (Regulations Governing Processed Fishery Products.)

§ 263.281 Score sheet for haddock fillets.

Total.....	10	

## Subpart E—United States Standards for Grades of Ocean-Perch Fillets and Pacific Ocean-Perch Fillets

## § 263.301 Product description.

The product described in this part consists of: (a) Clean, whole, wholesome fillets, cut away from either side of the ocean perch, *Sebastes marinus*, which are packaged in accordance with good commercial practice and are maintained at temperatures necessary for the preservation of the product; or (b) clean, whole, wholesome fillets, cut away from either side of the Pacific ocean perch, *Sebastes alutus*, which are packaged in accordance with good commercial practice and are maintained at temperatures necessary for the preservation of the product.

## § 263.302 Grades of ocean-perch fillets.

(a) "U.S. Grade A" is the quality of ocean-perch fillets that possess good flavor and odor; and for those factors of quality which are rated in accordance with the scoring system outlined in this part the total score is not less than 85 points.

(b) "U.S. Grade B" is the quality of ocean-perch fillets that possess at least reasonably good flavor and odor; and for those factors of quality which are rated in accordance with the scoring system

The purpose of the "test run" is to determine the time necessary to thaw the product. The complete thawing of the product is determined by frequent but gentle squeezing of the bag until no hard core or ice crystals are felt. This package which has been squeezed can not be used for drained weight calculations.

outlined in this part the total score is not less than 70 points.

(c) "Substandard" is the quality of ocean-perch fillets that fail to meet the requirements of U.S. Grade B.

## § 263.304 Product forms.

(a) Types:

(1) Fresh.

(2) Frozen, solid pack; glazed and unglazed.

(3) Frozen individually; glazed or unglazed.

(b) Styles:

(1) Skin on.

(2) Skinless.

## § 263.306 Recommended weights and dimensions.

(a) The net weights and dimensions of packaged ocean-perch fillets and Pacific ocean-perch fillets are not incorporated in the grades of the finished product since net weights and dimensions, as such, are not factors of quality for the purpose of these grades.

(b) It is recommended that the net weight of the packaged ocean-perch fillets and Pacific ocean-perch fillets be not less than 12 ounces and not over 10 pounds and that the product be classified as large, medium, or small as classified by common commercial size classification practices.

## § 263.311 Ascertaining the grade.

The grade of ocean-perch fillets is ascertained by examining the product in the frozen, thawed, and cooked states. The following factors of quality are evaluated in ascertaining the grade of the product: Flavor and odor, appearance, size, workmanship defects, and character.

These factors are rated in the following manner:

(1) *Flavor and odor*. This factor is rated directly by organoleptic evaluation. Score points are not assessed (see § 263.312).

(2) *Appearance, size, workmanship defects, and character*. The relative importance of these factors is expressed numerically on the scale of 100. The maximum number of points that may be given each of these factors are:

Factors	Points
Appearance	15
Size	20
Absence of defects	50
Character	15

Total possible score..... 100

## § 263.312 Evaluation of the unscored factor of flavor and odor.

(a) *Good flavor and odor*. "Good flavor and odor" (essential requirement for a Grade A product) means that the fish flesh has good flavor and odor characteristic of the species (either *Sebastes marinus* or *Sebastes alutus*) and is free from staleness, and off-flavors and off-odors of any kind.

TABLE I—SCORE DEDUCTIONS FOR APPEARANCE

Color of product	Deduction points		
No discoloration.....	0		
Slight yellowing.....	4		
Moderate yellowing.....	9		
Excessive yellowing and/or rusting.....	15		
Degree of dehydration of frozen product	Surface area affected (percent)		Deduction points
	Over—	Not over—	
Slight—Shallow and not color masking.....	0	1	0
	1	50	2
	50	100	5
Moderate—Deep, but just deep enough to easily scrape with fingernail.....	0	25	5
	25	50	10
	50	100	15
Excessive—Deep dehydration not easily scraped off.....	0	10	10
	5	15	15

The essential variations in quality within each factor which is scored are so described that the value may be ascertained for each factor and expressed numerically. Point deductions are allotted for each degree or amount of variation within each factor. The net score for each factor is the maximum points for that factor less the sum of the deduction-points within the factor. The total score for the product is the sum of the net scores for the four scored factors.

## § 263.314 Appearance.

(a) The factor of appearance refers to the color of the fish flesh, and to the degree and amount of surface dehydration of the frozen product.

(b) For the purpose of rating the factor of appearance the schedule of deduction-points in Table I apply. Frozen ocean-perch fillets which receive 15 deduction points for the factor of appearance shall not be graded above Substandard regardless of the total score for the product. This is a limiting rule.

## § 263.315 Size.

(a) The factor of size refers to the degree of freedom from undesirably small fillets.

(b) For the purpose of rating the factor of size, the schedule of deduction-points in Table II apply. Ocean-perch fillets which receive 20 deduction-points for this factor shall not be graded above Substandard regardless of the total score for the product. This is a limiting rule.

TABLE II—SCORE DEDUCTIONS FOR SIZE OF FILLETS

Number of fillets per pound	Number of small fillets or pieces of fillets										
	0	1	2	3	4	5	6	7	8	9	10

15 or more	0	5	10	15	20	20	20	20	20	20	20

## § 263.316 Workmanship defects.

(a) The factor of "workmanship defects" refers to the degree of freedom from improper packing, cutting and trimming imperfections, blemishes, and bones. Evaluation for the defect of improper packing is made on the frozen product. Evaluation of the defects of cutting and

trimming, blemishes, and bones are made on the thawed product.

(1) *Improper packing*. "Improper packing" means poor arrangement of fillets, presence of voids, depressions, frost, and the imbedding of packaging material into the frozen fish flesh.

(2) *Cutting and trimming imperfections*. "Cutting and trimming" imper-

fections" means that the fillets have ragged edges, tears, holes, or are otherwise improperly cut or trimmed.

(3) *Blemish*. "Blemish" means an instance of blood-spot, bruise, black-belly lining or membrane, fin, scales, or extraneous material. Blemish also means an instance of skin on skinned fillets. One "instance of blood spot" is one of such size and prominence as to be considered objectionable. An "instance of bruise" consists of a bruise not less than  $\frac{1}{2}$  square inch and not more than  $1\frac{1}{2}$  square inches in area; each bruise larger than  $\frac{1}{2}$  square inch is considered as two instances of bruise. An "instance of black-belly lining or membrane" is any piece of black-belly lining or membrane not less than  $\frac{1}{2}$  inch and not more than 1 inch in length; each additional  $\frac{1}{2}$  inch length of individual pieces of black-belly lining or membrane longer than 1 inch is considered as an instance. Each aggregate area of identifiable fin or parts of any fin up to 1 square inch is considered as one "instance of fin". One "instance of scales" is an aggregate area of scales greater than  $\frac{1}{2}$  square inch per fillet. One "instance of skin" consists of one piece of skin at least  $\frac{1}{2}$  square inch in area; except that any skin patches larger than  $1\frac{1}{2}$  square inches are considered as two instances of skin.

(4) *Bones*. One "instance of bones" means an objectionable bone or group of bones occupying or contacting a circular area up to 1 square inch. An objectionable bone is any bone of such size and rigidity as to remain objectionable after cooking. Bones which will soften or disintegrate after cooking are not considered objectionable.

(b) For the purpose of rating the factor of absence of defects the schedule of deduction-points in Table III applies.

TABLE III—SCORE DEDUCTIONS FOR WORKMANSHIP DEFECTS

Subfactors	Method of determining subfactor score	Deduction points
Improper packing.	Slight defects, not noticeably affecting the product's appearance.	0
	Moderate defects, noticeably affecting the product's appearance.	2
	Excessive defects, seriously affecting product's appearance.	4
Blemishes.	Number of blemishes per 1 lb. of product when there are 6 or less fillets per lb.: Over 0 not over 2..... Over 2 not over 4..... Over 4 not over 6..... Over 6 not over 7..... Over 7 not over 8..... Over 8 not over 9..... Over 9 not over 10..... Over 10 not over 11..... Over 11.....	1 1 2 3 4 5 6 7 8 9
	Number of blemishes per 1 lb. of product when there are 7 to 12 (inclusive) fillets per lb.: Over 0 not over 2..... Over 3 not over 6..... Over 5 not over 6..... Over 6 not over 7..... Over 7 not over 8..... Over 8 not over 9..... Over 9 not over 10..... Over 10 not over 11..... Over 11 not over 12..... Over 12.....	1 1 2 3 4 5 6 7 8 9
	Number of blemishes per 1 lb. of product when there are 13 or more fillets per lb.: Over 0 not over 2..... Over 3 not over 6..... Over 5 not over 6..... Over 6 not over 7..... Over 7 not over 8..... Over 8 not over 9..... Over 9 not over 10..... Over 10 not over 11..... Over 11 not over 12..... Over 12.....	1 1 2 3 4 5 6 7 8 9

(c) *Examination of the cooked product.* (1) Heating in a suitable manner means heating the product in one of two ways, as follows:

(i) Cut three or more portions about 4 by 3 by 1/2 inches from a frozen block. Wrap them individually or in a single layer in aluminum foil. Place the packaged portions on a wire rack suspended over boiling water in a covered container. Steam the packaged portions until the product is thoroughly heated, or

(ii) Cut and package the portions as previously described. Place the packaged portions on a flat cookie sheet or shallow flat-bottom pan of sufficient size so that the packages can be evenly spread on the sheet or pan. Place the pan and frozen contents in a properly ventilated oven heated to 400° F. and remove when the product is thoroughly heated.

(2) Texture refers to the condition of the cooked fish flesh. The texture should be firm, slightly resilient, but not tough or rubbery; and should be moist, but not mushy. Deductions for texture will follow the deductions assessed in table 1.

(3) Flavor and odor is evaluated organoleptically as described in § 264.111 (b).

(d) *General definitions.* (1) "Demonstrably acceptable" shall mean that the product has been produced commercially and met customer acceptance.

(2) "Adversely affected" shall mean that the unit cut would deviate more than 15 percent plus or minus from 1 ounce.

(3) "Small" (overall assessment) refers to a condition that is noticeable, but is not seriously objectionable.

(4) "Large" (overall assessment) refers to a condition that is not only noticeable, but is seriously objectionable.

(5) "Minor" (measured quantity or area) refers to a defect that affects the appearance or utility of the product or both.

(6) "Major" (measured quantity or area) refers to a defect that seriously affects the appearance or utility of the product or both.

§ 264.125 Tolerances for certification of officially drawn samples.

The sample rates and grades of specific lots shall be certified in accordance with Part 260 Subpart A of this chapter (Regulations Governing Processed Fishery Products).

#### Subpart B—[Reserved]

#### Subpart C—United States Standards for Grades of Frozen Raw Fish Portions

##### § 264.201 Description of the product.

The product described in this part consists of clean, wholesome, shaped

masses of cohering pieces (not ground) of fish flesh. The fish portions are cut from frozen fish blocks, and are packaged in accordance with good manufacturing practice. They are maintained at temperatures necessary for the preservation of the product. All fish portions in an individual package are prepared from the flesh of one species of fish.

##### § 264.202 Styles.

(a) *Style I—Skinless portions.* Portions prepared from fish blocks which have been made with skinless fillets.

(b) *Style II—Skin-on portions.* Portions prepared from fish blocks which have been made from demonstrably acceptable skin-on fillets.

##### § 264.203 Types.

(a) *Type I—Uniform shaped.* All portions in the sample are uniformly shaped.

(b) *Type II—Specialty cut.* All portions not covered in Type I.

##### § 264.204 Grades.

(a) "U.S. Grade A" is the quality of frozen raw fish portions that (1) possess a good flavor and odor and that (2) for those factors that are rated in accordance with the scoring system outlined in this part, have a total score of 85 to 100 points.

(b) "U.S. Grade B" is the quality of frozen raw fish portions that (1) possess at least reasonably good flavor and odor, and that (2) rate a total score of not less than 70 points for those factors of quality that are rated in accordance with the scoring system outlined in this part.

(c) "Substandard" or "Utility" is the quality of frozen raw fish portions that meet the requirements of § 264.201 but that otherwise fail to meet the requirements of "U.S. Grade B."

##### § 264.205 Labeling requirements for styles of frozen fish portions.

Section 260.86 (a), (b), and (c) of this chapter states the requirements for the use of approved grade marks, inspection marks and combined grade and inspection marks on processed fishery products. When an approved inspection mark is used on Style II (§ 264.202) of frozen raw fish portions, that style shall be conspicuously revealed on the label as having been made from "skin-on fillets."

##### § 264.211 Determination of the grade.

The grade is determined by examining the product for factors 1-8 in the frozen state and factors 9-11 in the cooked state.

(a) *Factors rated by score points.* Points are deducted for variations in the quality of each factor in accordance with the schedule in Table I. The total of points deducted is subtracted from 100 to obtain the score. The maximum score is 100, the minimum score is 0.

(b) *Factors not rated by score points.* The factor of "flavor and odor" is evaluated organoleptically by smelling and tasting after the product has been cooked in accordance with § 264.221 (c).

(1) Good flavor and odor (essential requirements for U.S. Grade A product) means that the cooked product has the typical flavor and odor of the indicated species and is free from rancidity, bitterness, staleness, and other off-flavor and odors of any kind.

(2) Reasonably good flavor and odor (minimum requirements of a U.S. Grade B product) means that the cooked product is lacking in good flavor and odor, but is free from objectionable off-flavors and off-odors of any kind.

##### § 264.221 Definitions and methods.

(a) *Selection of the sample unit.* The sample unit shall consist of 10 frozen raw fish portions taken at random from one or more packages as required. The fish portions for examination in the frozen and cooked state are spread out on a flat pan or sheet and are examined according to Table I. Definition of factors for point deductions are as follows:

(b) *Examination of sample, frozen state.* (1) "Ease of separation" refers to the difficulty of separating the portions from each other or from the packaging material.

(2) "Broken portion" means a portion with a break or cut equal to or greater than one-half the width or length of the portion.

(3) "Damaged portion" means a portion that has been mashed, physically or mechanically injured, misshaped or mutilated to the extent that its appearance is materially affected. The amount of damage is determined by using a grid composed of squares 1/4 inch x 1/4 inch to measure the area of the portion affected. No deductions are made for damage of less than 1/4 inch x 1/4 inch.

(4) "Voids" refer to objectionable holes, spaces, or depressions in the fish flesh. Instances of voids refer to each occurrence measured by placing a plastic grid marked off in 1/4-inch squares at last 1/8 inch in depth over the affected area. Each square is counted as one whether it is full or fractional. No deductions are made for voids of less than 1/4 inch x 1/4 inch.

TABLE 1. SCHEDULE OF POINT DEDUCTIONS PER SAMPLE

FROZEN STATE		
Factors scored	Method of determining score	Deduct
1 Ease of separation.....	Minor: Hand separated with difficulty. Each affected.....	2
	Major: Separated only by knife or other instrument. Each affected.....	4
2 Broken portion.....	Break or cut greater than 1/4 width or length. Each affected.....	10
3 Damaged portion.....	Mashed, mechanically and/or physically injured, misshaped or mutilated.	
	Minor: 1 to 5 instances. Each affected.....	2
	Major: Over 5 instances. Each affected.....	4
4 Voids.....	Holes, spaces, or depressions:	
	Minor: 1 to 5 instances. Each affected.....	1
	Major: Over 5 instances. Each affected.....	2
5 Discoloration (overall assessment).....	Small degree: Slight yellowing or rusting.....	16
	Large degree: Excessive yellowing or rusting.....	21
6 Dehydration (overall assessment).....	Surface dehydration:	
	Small degree: Easily scraped off with fingernail. Each affected.....	5
	Large degree: Deep dehydration not easily scraped off, affecting over 10 percent of surface area. Each affected.....	10
7 Uniformity of size.....	Deviation in length or width between the 2 largest and 2 smallest portions that are similarly shaped.	
	Up to 1/4 inch.....	0
	Over 1/4 inch and up to 1/2 inch.....	2
	Over 1/2 inch.....	10
8 Uniformity of weight.....	Weight ratio of 2 heaviest divided by the 2 lightest.	
	Over 1.0 but not over 1.2.....	0
	Over 1.2 but not over 1.3.....	5
	Over 1.3 but not over 1.4.....	2
	Over 1.4.....	10
COOKED STATE		
9 Blemishes.....	Skin (except for Style II) blood spots, bruises and discolorations.	
	Minor: 1 to 5 instances. Each affected.....	2
	Major: Over 5 instances. Each affected.....	4
10 Bones.....	Portions containing bones (potentially harmful). Each affected.....	10
11 Texture (overall assessment).....	Small degree: Moderately dry, soggy, or tough.....	5
	Large degree: Dry to the point of fibrousness, very mushy, tough, or rubbery skin (Style II).	10

<sup>1</sup> An instance—each 1/4-inch square.

(5) "Discoloration" is considered as a deviation in color from that normal to the species present in the portions.

(6) "Dehydration" refers to the presence of dehydrated (water-removed) tissue in the portions. Slight dehydration is surface dehydration which is not color-masking. Deep dehydration is color-masking and cannot be removed by scraping with a blunt instrument.

(7) "Uniformity of size" refers to the degree of uniformity in length and width of the frozen portions. Deviations are measured from the combined lengths of the two shortest and/or the combined widths of the two widest minus the combined widths of the two narrowest in the sample. Deductions are not made for overall deviations in length or width up to 1/4 inch.

(8) "Uniformity of weight" refers to the degree of uniformity of the weights of portions. Uniformity is measured by the combined weight of the two heaviest portions divided by the combined weight of the two lightest portions in the sample. No deductions are made for weight ratios less than 1.2 for Type I.

(c) *Examination of sample, cooked state.* Cooked state means the state of the sample after cooking in accordance with instructions accompanying the product. However, if specific instructions are lacking, cooking is accomplished by:

(1) *Boil in bag method.* Insert the sample of frozen portions into a boilable film-type pouch; fold the open end of the pouch over a suspension bar and clamp in place to provide a loose seal after evacuating the air by immersing the pouch into boiling water. Cook the contents for 20 minutes (until the internal

temperature of the portions reaches 160° F.).

(2) *Steam method.* Use 10 frozen portions, wrap them individually or in a single layer in aluminum foil, and place the packaged portions on a wire rack suspended over boiling water in a covered container. Steam the packaged portions for 20 minutes.

(3) *Bake method.* Package the 10 frozen portions as previously described. Place the packaged portions on a flat cookie sheet or shallow flat-bottom pan of sufficient size so that the packages can be evenly spread on the sheet or pan. Place the pan and frozen contents in a properly ventilated oven preheated to 400° F. for 20 minutes.

(d) *Factors examined in cooked state.*

(1) "Blemishes" refers to skin (except for Style II), blood spots or bruises, objectionable dark fatty flesh, or extraneous material. Instances of blemishes refer to each occurrence measured by placing a plastic grid marked off in 1/4-inch squares (1/4 square inch) over the defect area. Each square is counted as 1 whether it is full or fractional.

(2) "Bones" means the presence of potentially harmful bones in a portion. A potentially harmful bone is one that after being cooked is capable of piercing or hurting the palate.

(3) "Texture defects of the fish flesh and texture of skin in Style II" refers to the absence of the normal textural properties of the cooked fish flesh and to the absence of tenderness of the cooked skin in Style II. Normal textural properties of cooked fish flesh are tenderness, firmness, and moistness without excess water. Texture defects of the cooked flesh are

dryness, mushiness, toughness, and rubberiness. Texture defects of the cooked skin in Style II are mushiness, rubberiness, toughness, and stringiness.

(e) *General definitions.* (1) "Small" (overall assessment) refers to a condition that is noticeable but is only slightly objectionable.

(2) "Large" (overall assessment) refers to a condition that not only is noticeable but is seriously objectionable.

(3) "Minor" (individual assessment) refers to a defect that slightly affects the appearance and/or utility of the product.

(4) "Major" (individual assessment) refers to a defect that seriously affects the appearance and/or utility of the product.

(5) "Net weight": The net weight of the portions if glazed shall be determined by the following method:

(i) Weigh the portions with the glaze intact, which gives the gross weight.

(ii) Thaw the glaze from the surfaces of the product with flowing tap water.

(iii) Gently wipe off the excess water from the surfaces with a single water saturated paper towel.

(iv) Weigh the deglazed portions, which gives the net weight.

##### § 264.225 Tolerances for certification of officially drawn samples.

The sample rate and grades of specific lots shall be certified in accordance with Part 260 Subpart A of this chapter (Regulations Governing Processed Fishery Products).

#### Subpart D—United States Standards for Grades of Frozen Raw Breaded Fish Sticks

##### § 264.251 Description of the product.

Frozen raw breaded sticks are clean, wholesome, rectangular-shaped unglazed masses of cohering pieces (not ground) of fish flesh coated with breading. The sticks are cut from frozen fish blocks; are coated with a suitable, wholesome batter and breading; are packaged, and frozen in accordance with good commercial practice. They are maintained at temperatures necessary for preservation of the product. Frozen raw breaded fish sticks weigh up to and including 1 1/2 ounces; are at least 3/8 inch thick; and their largest dimension is at least 3 times the next largest dimension. All sticks in an individual package are prepared from the flesh of one species of fish.

##### § 264.252 Composition of the product.

(a) Frozen raw breaded fish sticks shall contain 72 percent by weight of fish flesh determined by the official end-product method as set forth in § 264.271 (f). Fish flesh content may be determined by the on-line method as set forth in § 264.271 (g). Provided, That the results are consistent with the fish flesh content requirement of 60 percent by weight when verified by the official end-product method.

(b) Production methods employed in official establishments shall be kept relatively constant for each production lot so as to minimize variation in any factors which may affect the relative fish flesh content.

## § 264.253 Grades.

(a) "U.S. Grade A" is the quality of frozen raw breaded fish sticks that (1) possess good flavor and odor and (2) rate a total score of not less than 85 points for those factors of quality that are rated in accordance with the scoring system outlined elsewhere in this part.

(b) "U.S. Grade B" is the quality of frozen raw breaded fish sticks that (1) possess at least reasonably good flavor and odor and (2) rate a total score of not less than 70 points for those factors of quality that are rated in accordance with the scoring system outlined in this part.

(c) "Substandard" is the quality of frozen raw breaded sticks that meet the requirements of § 264.251 *Description of product*, but otherwise fail to meet the requirements of "U.S. Grade B."

## § 264.261 Determination of the grade.

The grade is determined by examining the product in the frozen and cooked states and is evaluated by considering the following factors:

(a) *Factors rated by score points.* Points are deducted for variations in the quality of each factor in accordance with the schedule in Table 1. The total of points deducted is subtracted from 100 to obtain the score. The maximum score is 100; the minimum score is 0.

(b) *Factors not rated by score points.* The factor of "flavor and odor" is evaluated organoleptically by smelling, and tasting, after the product has been cooked in accordance with § 264.271(c).

(1) Good flavor and order (essential requirements for a Grade A (product) means that the cooked product has the typical flavor and odor of the indicated species of fish and of the breading and is free from rancidity bitterness, staleness, and off-flavors and off-odors of any kind.

(2) Reasonably good flavor and odor (minimum requirements of a Grade B product) means that the cooked product is lacking in good flavor and odor but is free from objectionable off-flavors and off-odors of any kind.

## § 264.271 Definitions.

(a) Selection of the sample unit: The sample unit shall consist of 10 frozen raw breaded fish sticks taken at random from one or more packages as required. The fish sticks are spread out on a flat pan or sheet and are examined according to Table 1. Definitions of factors for point deductions are as follows:

(b) Examination of sample, frozen state:

(1) "Condition of package" refers to the presence in the package of loose breading and/or loose frost.

(2) "Ease of separation" refers to the difficulty of separating sticks from each other or from packaging material that are frozen together during the freezing.

(3) "Broken stick" means a stick with a break or cut equal to or greater than one-half the width of the stick.

(4) "Damaged stick" means a stick that has been mashed, physically or

mechanically injured, misshaped, or mutilated to the extent that its appearance is materially affected. The amount of damage is measured by using a grid composed of squares  $\frac{1}{4}$  inch (that is, squares with an area of  $\frac{1}{16}$  square inch each) to measure the area of the stick affected. Deductions are not made for damage less than  $\frac{1}{16}$  square inch.

(5) "Uniformity of size" refers to the degree of uniformity in length and width of the frozen sticks. Deviations are measured from the combined lengths of the two longest minus the combined lengths of the two shortest and/or the

combined widths of the two widest minus the combined widths of the two narrowest. Deductions are not made for overall deviations in length or width up to  $\frac{1}{4}$  inch.

(6) "Uniformity of weight" refers to the degree of uniformity of the weights of the sticks. Uniformity is measured by the combined weight of the two heaviest sticks divided by the combined weight of the two lightest sticks. No deductions are made for weight ratios less than 1.15.

(c) Cooked state means the state of the product after cooking in accordance

TABLE 1—SCHEDULE OF POINT DEDUCTIONS PER SAMPLE UNIT OF 10 STICKS

FROZEN STATE			
Factors scored	Method of determining score		Deduct
1 Condition of package.....	Small degree: Moderate loose breading and/or moderate frost.....	2	
	Large degree: Excessive loose breading and/or excessive amount frost.....	5	
2 Ease of separation.....	Minor: Hard separated with difficulty.—Each affected.....	1	
	Major: Separated only by knife or other instrument.—Each affected.....	2	
3 Broken stick.....	Break or cut greater than $\frac{1}{2}$ length width.—Each affected.....	10	
	<i>Mashed, mechanically and/or physically injured, misshaped or mutilated<sup>1</sup></i>		
4 Damaged stick.....	Minor: 1 to 3 instances.—Each affected.....	2	
	Major: Over 3 instances.—Each affected.....	4	
5 Uniformity: Size.....	Deviation in length or width between the 2 largest and 2 smallest sticks is:		
	Up to $\frac{1}{4}$ inch.....	0	
	Over $\frac{1}{4}$ inch and up to $\frac{1}{2}$ inch.....	2	
	Over $\frac{1}{2}$ inch.....	10	
6 Weight.....	Weight ratio of the 2 heaviest divided by the 2 lightest sticks:		
	Over 1.0; not over 1.15.....	0	
	Over 1.15; not over 1.3.....	2	
	Over 1.3; not over 1.4.....	4	
	Over 1.4.....	10	
COOKED STATE			
7 Distortion.....	Minor: Bending, shrinking, twisting ( $\frac{1}{4}$ to $\frac{1}{2}$ inch).—Each affected.....	1	
	Major: Excessive bending, shrinking, twisting (over $\frac{1}{2}$ inch).—Each affected.....	2	
	<i>Bare spots, blistering, ridges, breaks, curds<sup>1</sup></i>		
8 Coating defects.....	Minor: 1 to 3 instances.—Each affected.....	1	
	Major: Over 3 instances.—Each affected.....	2	
	<i>Skin, blood spots, bruises, discolorations<sup>1</sup></i>		
9 Blemishes.....	Minor: 1 to 6 instances.—Each affected.....	2	
	Major: Over 6 instances.—Each affected.....	4	
10 Bones.....	Sticks containing bones (potentially harmful).—Each affected.....	10	
11 Texture:			
Coating.....	Small degree: Moderately dry, soggy, doughy or tough.....	5	
	Large degree: Farinaceous (mealy), pasty, very tough.....	15	
12 Fish flesh.....	Small degree: Moderately dry, soft, mushy.....	5	
	Large degree: Dry to the point of fibrousness, very mushy, tough or rubbery.....	15	

<sup>1</sup> An instance—each  $\frac{1}{16}$  square inch ( $\frac{1}{4}$ -inch square).

with the instructions accompanying the product. However, if specific instructions are lacking, the product for inspection is cooked as follows: Transfer the product, while still in frozen state, into a wire mesh fry basket large enough to hold the fish sticks in a single layer and cook by immersing 2–3 minutes in 375° F. liquid or hydrogenated cooking oil. After cooking, allow the fish sticks to drain 15 seconds and place the fish sticks on a paper napkin or towel to absorb excess oil.

(d) Examination of sample, cooked state:

(1) "Distortion" refers to the degree of bending of the long axis of the stick. Distortion is measured as the greatest deviation from the long axis. Deductions are not made for deviations of less than  $\frac{1}{4}$  inch.

(2) "Coating defects" refers to breaks, lumps, ridges, depressions, blisters, or

swells and curds in the coating of the cooked product. Breaks in the coating are objectionable bare spots through lumps are objectionable outcroppings of breading on the stick surface. Ridges which the fish flesh is plainly visible. are projections of excess breading at the edges of the fish flesh. Depressions are objectionable visible voids or shallow areas which are lightly covered by breading. Blisters are measured by the swelling or exposed area in the coating resulting from the bursting or breaking of the coating. Curd refers to crater-like holes in the breading filled with coagulated albumin. Instances of these defects are measured by a plastic grid marked off in  $\frac{1}{4}$ -inch squares ( $\frac{1}{16}$  square inch). Each square is counted as 1 whether it is full or fractional.

(3) "Blemishes" refers to skin, blood spots or bruises, objectionable dark fatty flesh, or extraneous material. In-

stances of blemishes refer to each occurrence measured by placing a plastic grid marked off in  $\frac{1}{4}$ -inch squares ( $\frac{1}{16}$  square inch) over the defect area. Each square is counted as 1 whether it is full or fractional.

(4) "Bones" means the presence of potentially harmful bones in a stick. A potentially harmful bone is one that after being cooked is capable of piercing or hurting the palate.

(5) "Texture defects of the coating" refers to the absence of the normal textural properties of the coating which are crispness and tenderness. Coating texture defects are dryness, sogginess, mushiness, doughiness, toughness, pastyness, as sensed by starchiness or other sticky properties felt by mouth tissues and/or meanness.

(6) "Texture defects of the fish flesh" refers to the absence of the normal textural properties of the cooked fish flesh, which are tenderness, firmness, and moistness without excess water. Texture defects of the flesh are dryness, mushiness, toughness, and rubberiness.

## (c) General definitions:

(1) "Small" (overall assessment) refers to a condition that is noticeable but is not seriously objectionable.

(2) "Large" (overall assessment) refers to a condition that not only is noticeable but is seriously objectionable.

(3) "Minor" (individual assessment) refers to a defect that slightly affects the appearance and/or utility of the product.

(4) "Major" (individual assessment) refers to a defect that seriously affects the appearance and/or utility of the product.

(f) "Minimum fish flesh content—End-product determination" refers to the minimum percent, by weight, of the average fish flesh content of three frozen raw breaded fish sticks (sample unit for fish flesh determination), as determined by the following method:

(1) *Equipment needed.* (i) Water bath (for example, a 3- to 4-liter beaker).

(ii) Balance accurate to 0.1 gram.

(iii) Clip tongs of wire, plastic, or glass.

(iv) Stop-watch or regular watch readable to a second.

(v) Paper towels.

(vi) Spatula, 4-inch blade with rounded tip.

(vii) Nut pick.

(viii) Thermometer (immersion type) accurate to  $\pm 2^\circ$  F.

(2) *Procedure.* (i) Calculate the weight of three frozen raw breaded fish sticks by dividing the declared net weight on the label by the number of fish sticks indicated on the label to obtain the weight of an individual fish stick and multiply by three. If the number of fish sticks contained in the package is not declared on the label, the actual weight of three frozen raw breaded fish sticks shall be used.

(ii) Using tongs, place each stick individually in the water bath maintained at 63° F. to 120° F. and allow to remain

until the breading becomes soft and can easily be removed from the still frozen fish flesh (between 10 to 110 seconds for sticks held in storage at 0° F.).

(iii) At the end of the immersion, remove the fish stick from the water and blot the stick lightly with double thickness paper toweling. This step should be completed in no more than 7 seconds.

(iv) Scrape and remove the breading material and batter from the fish flesh with the spatula removing the softened breading material and batter from the narrow sides and ends of the stick on

the initial movements, followed by removing the material from the wider flat surfaces.

(v) Residual batter and breading may remain on some sticks prepared using batters that are difficult to remove after one dipping. When this occurs re-dip the partially "debreaded" stick in 63° to 86° F. (room temperature) water for approximately 2 seconds. Follow step 3 toweling, and remove the softened residual batter and breading material.

(vi) Weigh all the "debreaded" fish sticks.

(vii) Calculate the percent of fish flesh in the sample unit by the following formula:

$$\text{Percent fish flesh} = \frac{\text{Weight of fish flesh (vi)}}{\text{Weight of three raw breaded fish sticks (i)}} \times 100$$

*Example.* The declared net weight of five 1 oz. breaded fish sticks would be 5 ounces. The average weight of three groups of five unbreaded fish sticks would be 3.6 ounces. The percent fish flesh would be 72.

$$\text{Percent fish flesh} = \frac{\text{Weight of fish flesh (sample unit) (i)} \times 100}{\text{Declared net weight of raw breaded fish sticks} \times 5 \text{ (ii)}}$$

(g) "Minimum fish flesh content—On-line determination" refers to the minimum percent fish flesh, by weight, of the average weight of three groups of five fish sticks (sample unit for fish flesh determination), as determined by the following:

(1) Equipment needed—Balance accurate to 0.1 gram.

(2) Procedure:

(i) Weigh three groups of five raw unbreaded fish sticks from the line. These weights should be recorded and averaged (average weight of three groups of five sticks) and percent fish flesh calculated immediately after the average weights are determined.

(ii) Calculate the percent fish flesh in the sample unit by using the average weight of three groups of five unbreaded fish sticks and the declared net weight of five breaded fish sticks.

(iii) Frequency of on-line fish flesh content determination. A minimum of three determinations of fish flesh content shall be carried out for small production runs or lots, i.e., 3× (three groups of five unbreaded fish sticks). For larger production runs or lots, a minimum of 1 determination i.e., 1× (three groups of five unbreaded fish sticks), shall be carried out for every hour of production of product units of the same weight.

## § 264.272 Use of alternate methods of fish flesh determination.

(a) The end-product method in § 264.271(f) for determining fish flesh content shall be used for lot and appeal inspections and may be used for verification inspection.

(b) The on-line method in § 264.271(g) for determining fish flesh content may be used during processing operations.

## § 264.275 Tolerances for certification of officially drawn samples.

The sample rate and grades of specific lots shall be certified in accordance with

Part 260, Subpart A of this chapter (Regulations Governing Processed Fishery Products).

Subpart E—United States Standards for Grades of Frozen Raw Breaded Fish Portions

## § 264.301 Description of the product.

Frozen raw breaded portions are clean, wholesome, uniformly shaped, unglazed masses of cohering pieces (not ground) of fish flesh coated with breading. The portions are cut from frozen fish blocks; are coated with a suitable, wholesome batter and breading; and are packaged and frozen in accordance with good commercial practice. They are maintained at temperatures necessary for the preservation of the product. Frozen raw breaded fish portions weigh more than 1½ ounces, and are at least  $\frac{3}{4}$ -inch thick. Frozen raw breaded fish portions contain not less than 75 percent, by weight, of fish flesh. All portions in an individual package are prepared from the flesh of one species of fish.

## § 264.302 Styles.

(a) *Style I—Skinless portions.* Portions prepared from fish blocks which have been made with skinless fillets.

(b) *Style II—Skin-on-portion.* Portions prepared from fish blocks which have been made with demonstrably acceptable skin-on fillets.

## § 264.303 Composition of the product.

(a) Frozen raw breaded fish portions shall contain 75 percent by weight of fish flesh determined by the official end-product method as set forth in § 264.321 (f). Fish flesh content may be determined by the on-line method as set forth in § 264.321(g): *Provided*, That the results are consistent with the fish flesh content requirement of 75 percent by weight, when verified by the official end-product method.

(b) Production methods employed in official establishments shall be kept relatively constant for each production lot so as to minimize variation in any factors which may affect the relative fish flesh content.

#### 264.301 Grades.

(a) "U.S. Grade A" is the quality of frozen raw breaded fish portions that (1) possess good flavor and odor and (2) rate a total score of not less than 85 points for those factors of quality that are rated in accordance with the scoring system outlined in this part.

(b) "U.S. Grade B" is the quality of frozen raw breaded fish portions that (1) possess at least reasonably good flavor and odor and (2) rate a total score of not less than 70 points for those factors of quality that are rated in accordance with the scoring system outlined in this part.

(c) "Substandard" is the quality of frozen raw breaded portions that meet the requirements of § 264.301, Description of Product, but otherwise fail to meet the requirements of "U.S. Grade B".

#### § 264.305 Labeling requirements for styles of frozen raw breaded fish portions.

Section 260.86 (a), (b), and (c) of Part 260 states the requirements for the use of approved grade marks, inspection marks and combined grade and inspection marks on processed fishery products. When an approved inspection mark is used on Style II (§ 264.302) of frozen raw breaded fish portions, that style shall be conspicuously revealed on the label as having been made from "skin-on-fillets".

#### § 264.311 Determination of the grade.

The grade is determined by examining the product in the frozen and cooked states and is evaluated in accordance with the following factors:

(a) *Factors rated by score points.* Points are deducted for variations in the quality of each factor in accordance with the schedule in Table 1. The total points deducted is subtracted from 100 to obtain the score. The maximum score is 100; the minimum score is 0.

(b) *Factors not rated by score points.* The factor of "flavor and odor" is evaluated organoleptically by smelling and tasting, after the product has been cooked in accordance with § 264.321(c).

(1) Good flavor and odor (essential requirements for a Grade A product) means that the cooked product has the typical flavor and odor of the indicated species of fish and of the breading and is free from rancidity, bitterness, staleness, and off-flavors and off-odors of any kind.

(2) Reasonably good flavor and odor (minimum requirements of a Grade B product) means that the cooked product is lacking in good flavor and odor but is

Factors scored	Method of determining score	Deduct
Frozen state	1 Condition of package..... Small degree: Moderate loose breading and/or moderate frost..... Large degree: Excessive loose breading and/or excessive amount frost.....	3 6
	2 Ease of separation..... Minor: Hand separated with difficulty. Each affected..... Major: Separated only by knife or other instrument. Each affected.....	1 2
	3 Broken portion..... Break or cut greater than 1/2 width or length. Each affected.....	10
	4 Damaged portion..... Mashed, mechanically and/or physically injured, misshaped or mutilated..... Minor: 1 to 5 instances. Each affected..... Major: Over 5 instances. Each affected.....	2 4
	5 Uniformity..... Size..... Deviation in length or width between the 2 largest and 2 smallest portion is: Up to 1/4 inch..... Over 1/4 inch and up to 1/2 inch..... Over 1/2 inch.....	0 3 10
	6 Weight..... Weight ratio of the 2 heaviest divided by the 2 lightest portions: Over 1.2 but not over 1.3..... Over 1.3 but not over 1.4..... Over 1.4.....	0 2 10
	7 Distortion..... Minor: Bending, shrinking, twisting—1/4 to 1/2 inch. Each affected..... Major: Excessive bending, shrinking, twisting—over 1/2 inch. Each affected.....	1 2
	8 Coating defects..... Bare spots, blistering, ridges, breaks, curds: Minor: 1 to 6 instances. Each affected..... Major: Over 6 instances. Each affected.....	1 2
	9 Blemishes..... Skin (except for style II), blood spots, bruises, and discolorations: Minor: 1 to 6 instances. Each affected..... Major: Over 6 instances. Each affected.....	3 4

<sup>1</sup> An instance—each 1/4 square inch (1/4-inch square).

free from objectionable off-flavors and off-odors of any kind.

#### § 264.321 Definitions.

(a) Selection of the sample unit: The sample unit shall consist of 10 frozen raw breaded fish portions taken at random from one or more packages as required. The fish portions are spread out on a flat pan or sheet and are examined according to Table 1. Definitions of factors for point deductions are as follows:

(b) Examination of sample, frozen state: (1) "Condition of package" refers to the presence in the package of loose breading and/or loose frost.

(2) "Ease of separation" refers to the difficulty of separating the portions from each other or from the packaging material.

(3) "Broken portion" means a portion with a break or cut equal to or greater than one-half the width or length of the portion.

(4) "Damaged portion" means a portion that has been mashed, physically or mechanically injured, misshaped, or mutilated to the extent that its appearance is materially affected. The amount of damage is measured by using a grid composed of squares 1/4-inch x 1/4-inch (that is, squares with an area of 1/16 square inch each) to measure the area

of the portion affected. No deductions are made for damage of less than 1/16 square inch.

(5) "Uniformity of size" refers to the degree of uniformity in length and width of the frozen portions. Deviations are measured from the combined lengths of the two longest minus the combined lengths of the two shortest and/or the combined widths of the two widest minus the combined widths of the two narrowest portions in the sample. Deductions are not made for overall deviations in length or width up to 1/4 inch.

(6) "Uniformity of weight" refers to the degree of uniformity of the weights of the portions. Uniformity is measured by the combined weight of the two heaviest portions divided by the combined weight of the two lightest portions in the sample. No deductions are made for weight ratios less than 1.2.

(c) (1) Cooked state means the state of the product after being cooked in accordance with the instructions accompanying the product. If, however, specific instructions are lacking, the product being inspected is cooked as follows:

(2) Transfer the product, while still frozen, into a wire mesh fry basket large enough to hold the fish portions in a single layer and cook by immersing them

3-5 minutes in liquid or hydrogenated cooking oil heated to 350° to 375° F. After cooking, allow the fish portions to drain 15 seconds and place them on a paper napkin or towel to absorb excess oil.

(d) Examination of sample, cooked state.

(1) "Distortion" refers to the degree of bending of the long axis of the portion. Distortion is measured as the greatest deviation from the long axis. Deductions are not made for deviations of less than 1/4 inch.

(2) "Coating defects" refers to breaks, lumps, ridges, depressions, blisters or swells and curds in the coating of the cooked product. Breaks in the coating are objectionable bare spots through which the fish flesh is plainly visible. Lumps are objectionable outcroppings of breading on the portion surface. Ridges are projections of excess breading at the edges of the portions. Depressions are objectionable visible voids or shallow areas that are lightly covered by breading. Blisters are measured by the swelling or exposed area in the coating resulting from the bursting or breaking of the coating. Curd refers to crater-like holes in the breading filled with coagulated white or creamy albumin. Instances of these defects are measured by a plastic grid marked off in 1/4-inch squares (1/4 square inch). Each square is counted as 1 whether it is full or fractional.

(3) "Blemishes" refers to skin (except for Style II), blood spots or bruises, objectionable dark fatty flesh, or extraneous material. Instances of blemishes refers to each occurrence measured by placing a plastic grid marked off in 1/4-inch squares (1/4 square inch) over the defect area. Each square is counted as 1 whether it is full or fractional.

(4) "Bones" means the presence of potentially harmful bones in a portion. A potentially harmful bone is one that after being cooked is capable of piercing or hurting the palate.

(5) "Texture defects of the coating" refers to the absence of the normal textural properties of the coating which are crispness and tenderness. Defects in coating texture are dryness, sogginess, mushiness, doughiness, toughness, pastyness, as sensed by starchiness or other sticky properties felt by mouth tissues and/or mealiness.

(6) "Texture defects of the fish flesh and texture of skin in Style II" refers to the absence of the normal textural properties of the cooked fish flesh and to the absence of tenderness of the cooked skin in Style II. Normal textural properties of cooked fish flesh are tenderness, firmness, and moistness without excess water. Texture defects of the cooked flesh are dryness, mushiness, toughness, and rubberiness. Texture defects of the cooked skin in Style II are mushiness, rubberiness, toughness, and stringiness.

(e) General definitions. (1) "Small" (overall assessment) refers to a condition that is noticeable but is not seriously objectionable.

(2) "Large" (overall assessment) refers to a condition that not only is noticeable but is seriously objectionable.

(3) "Minor" (individual assessment) refers to a defect that slightly affects the appearance and/or utility of the product.

(4) "Major" (individual assessment) refers to a defect that seriously affects the appearance and/or utility of the product.

(f) "Minimum fish flesh content—End-product determination" refers to the minimum percent, by weight, of the average fish flesh content of three frozen raw breaded portions (sample unit for fish flesh determination), as determined by the following method:

(1) *Equipment needed.* (i) Water bath (for example, a 3 to 4 liter beaker). (ii) Balance accurate to 0.1 gram. (iii) Clip tongs of wire, plastic, or glass. (iv) Stop-watch or regular watch readable to a second.

(v) Paper towels. (vi) Spatula, 4-inch blade with rounded tip. (vii) Nut pick. (viii) Thermometer (immersion type) accurate to +2° F.

(2) *Procedure.*

(i) Calculate the weight of three frozen raw breaded portions by dividing the declared net weight on the label by the number of portions indicated on the label to obtain the weight of an individual portion and multiply by three.

$$\text{Percent fish flesh} = \frac{\text{Weight of fish flesh (vi)}}{\text{Weight of three raw breaded portions (i)}} \times 100$$

(g) "Minimum fish flesh content—On-line determination" refers to the minimum percent fish flesh, by weight, of the average weight of three groups of five portions (sample unit for fish flesh determination), as determined by the following:

(1) *Equipment needed.* Balance accurate to 0.1 gram. (2) *Procedure:* (i) Weigh three groups of five raw

unbreaded portions from the line. These weights should be recorded and averaged (average weight of three groups of five portions) and percent fish flesh calculated immediately after the average weights are determined.

(ii) Calculate the percent fish flesh in the sample unit by using the average weight of three groups of five unbreaded portions and the declared net weight of five finished product units.

(iii) Calculate the percent fish flesh in the sample unit by the following formula:

(v) Residual batter and breading may remain on some portions prepared using batters that are difficult to remove after one dipping. When this occurs, redip the partially "debreaded" portion in 63° to 86° F. (room temperature) water for approximately 2 seconds. Follow step 3 to towel, and remove the softened residual batter and breading material.

(vi) Weigh all the "debreaded" fish portions. (vii) Calculate the percent fish flesh in the sample unit by the following formula:

$$\text{Percent fish flesh} = \frac{\text{Weight of fish flesh (vi)}}{\text{Declared net weight of raw breaded portions} \times 5} \times 100$$

$$\text{Percent fish flesh} = \frac{\text{Weight of fish flesh (sample unit (i))}}{\text{Declared net weight of raw breaded portions} \times 5} \times 100$$

(iii) Frequency of on-line fish flesh content determination shall be minimum of three determinations of fish flesh content for small production runs or lots, i.e., 3×(three groups of five unbreaded portions). For larger production runs or lots, a minimum of one determination i.e., 1×(three groups of five unbreaded portions), shall be made for every hour of production of product units of the same weight.

(b) The on-line method in § 264.321(g) for determining fish flesh content may be used during processing operations.

§ 264.325 Tolerances for certification of officially drawn samples.

The sample rate and grades of specific lots shall be certified in accordance with Part 260, Subpart A of this chapter (Regulations Governing Processed Fishery Products), except that a sample unit shall consist of 10 portions taken at random from one or more packages as required.

§ 264.322 Use of alternate methods of fish flesh determination.

(a) The end-product method in § 264.321(f) for determining fish flesh content shall be used for lot and appeal

inspections and may be used for verification inspection.

(b) The on-line method in § 264.321(g) for determining fish flesh content may be used during processing operations.

§ 264.325 Tolerances for certification of officially drawn samples.

The sample rate and grades of specific lots shall be certified in accordance with Part 260, Subpart A of this chapter (Regulations Governing Processed Fishery Products), except that a sample unit shall consist of 10 portions taken at random from one or more packages as required.

### Subpart F—United States Standards for Grades of Frozen Fried Fish Sticks

#### § 264.351 Description of the product.

Frozen fried fish sticks are clean, wholesome, rectangular-shaped unglazed masses of cohering pieces (not ground) of fish flesh coated with breading and partially cooked. The sticks are cut from frozen fish blocks; are coated with a suitable, wholesome batter and breading; are fried, packaged, and frozen in accordance with good manufacturing practices. They are maintained at temperatures necessary for preservation of the product. Frozen fried fish sticks weigh up to and including 1½ ounces; are at least three-eighths of an inch thick; and their largest dimension is at least three times the next largest dimension. All sticks in an individual package are prepared from the flesh of one species of fish.

#### § 264.352 Composition of the product.

(a) Frozen fried fish sticks shall contain 60 percent by weight of fish flesh determined by the official end-product method as set forth in § 264.371(f). Fish flesh content may be determined by the on-line method as set forth in § 264.371(g). *Provided*, That the results are consistent with the fish flesh content requirement of 60 percent by weight, when verified by the official end-product method.

(b) Production methods employed in official establishments shall be kept relatively constant for each production lot so as to minimize variation in any factors which may affect the relative fish flesh content.

#### § 264.353 Grades.

(a) "U.S. Grade A" is the quality of frozen fried fish sticks that (1) possess good flavor and odor and (2) rate a total score of not less than 85 points for those factors of quality that are rated in accordance with the scoring system outlined elsewhere in this part.

(b) "U.S. Grade B" is the quality of frozen fried fish sticks that (1) possess at least reasonably good flavor and odor and (2) rate a total score of not less than 70 points for those factors of quality that are rated in accordance with the scoring system outlined in this part.

(c) "Substandard" is the quality of frozen fried fish sticks that meet the requirements of § 264.351 *Description of product*, but otherwise fail to meet the requirements of "U.S. Grade B."

#### § 264.361 Determination of the grade.

The grade is determined by examining the product in the frozen and cooked states and is evaluated by considering the following factors:

(a) *Factors rated by score points.* Points are deducted for variations in the quality of each factor in accordance with the schedule in Table 1. The total of points deducted is subtracted from 100 to obtain the score. The maximum score is 100; the minimum score is 0.

(b) *Factors not rated by score points.*

The factor of "flavor and odor" is evaluated organoleptically by smelling, and tasting, after the product has been cooked in accordance with § 264.371.

(1) Good flavor and odor (essential requirements for a Grade A Product) means that the cooked product has the typical flavor and odor of the indicated species of fish and of the breading and

is free from rancidity, bitterness, staleness, and off-flavors and off-odors of any kind.

(2) Reasonably good flavor and odor (minimum requirements of a Grade B Product) means that the cooked product is lacking in good flavor and odor but is free from objectionable off-flavors and off-odors of any kind.

TABLE 1—SCHEDULE OF POINT DEDUCTIONS PER SAMPLE UNIT OF 10 STICKS

FROZEN STATE		
Factors scored	Method of determining score	Deduct
1 Condition of package.....	Small degree: Loose free oil, and/or moderate loose breading and/or moderate frost. Large degree: Oil soaking through package and/or excessive loose breading and/or excessive amount frost.	2
2 Ease of separation.....	Minor: Hand separated with difficulty.—Each affected. Major: Separated only by knife or other instrument.—Each affected.	1
3 Broken stick.....	Break or cut greater than ¼ length or width.—Each affected.  <i>Mashed, mechanically and/or physically injured, misshaped or mutilated</i> <sup>1</sup>	10
4 Damaged stick.....	Minor: 1 to 3 instances.—Each affected. Major: Over 3 instances.—Each affected.	2
5 Uniformity: Size.....	Deviation in length or width between the 2 largest and 2 smallest sticks is: Up to ¼ inch..... Over ¼ inch and up to ½ inch..... Over ½ inch.....	0 3 10
6 Weight.....	Weight ratio of the 2 heaviest divided by the 2 lightest sticks: Over 1.0; not over 1.1..... Over 1.1; not over 1.3..... Over 1.3; not over 1.4..... Over 1.4.....	0 2 5 10
7 Distortion.....	Minor: Bending, shrinking, twisting (¼ to ½ inch).—Each affected. Major: Excessive bending, shrinking, twisting (over ½ inch).—Each affected.	1
8 Color.....	Minor: Sticks differing slightly from average color of sticks in sample unit.—Each affected. Major: Sticks excessively dark or light from average color of sticks in sample unit.—Each affected.  <i>Bare spots, blistering, ridges, breaks, curds</i> <sup>1</sup>	2
9 Coating defects.....	Minor: 1 to 3 instances.—Each affected. Major: Over 3 instances.—Each affected.  <i>Skin, blood spots, bruises, discolorations</i> <sup>1</sup>	1
10 Blemishes.....	Minor: 1 to 6 instances.—Each affected. Major: Over 6 instances.—Each affected.	1
11 Bones.....	Sticks containing bones (potentially harmful).—Each affected.	10
12 Texture: Coating.....	Small degree: Moderately dry, soggy, doughy, oily, and tough. Large degree: Farinaceous (mealy), puffy, very tough and/or oily.	5
13 Fish flesh.....	Small degree: Moderately dry, soft, mushy. Large degree: Dry to the point of fibrousness, very mushy, tough, and rubbery.	5

<sup>1</sup> An instance—each ¼ square inch (¼-inch square).

#### § 264.371 Definitions.

(a) Selection of the sample unit: The sample unit shall consist of 10 frozen fried fish sticks taken at random from one or more packages as required. The fish sticks are spread out on a flat pan or sheet and are examined according to Table 1. Definitions of factors for point deductions are as follows:

(b) Examination of sample, frozen state:

(1) "Condition of package" refers to the presence in the package of free excess oil and/or loose breading and/or loose frost.

(2) "Ease of separation" refers to the difficulty of separating sticks from each other or from packaging material that are frozen together after the frying operation and during the freezing.

(3) "Broken stick" means a stick with a break or cut equal to or greater than one-half the width of the stick.

(4) "Damaged stick" means a stick that has been mashed, physically or mechanically injured, misshaped or mutilated to the extent that its appearance is materially affected. The amount of damage is measured by using a grid composed of squares ¼ inch (that is, squares with an area of ¼ square inch each) to measure the area of the stick affected. Deductions are not made for damage less than ¼ square inch.

(5) "Uniformity of size" refers to the degree of uniformity in length and width of the frozen sticks. Deviations are measured from the combined lengths of the two longest minus the combined lengths of the two shortest and/or the

combined widths of the two widest minus the combined widths of the two narrowest. Deductions are not made for overall deviations in length of width up to ¼ inch.

(6) "Uniformity of weight" refers to the degree of uniformity of the weights of the sticks. Uniformity is measured by the combined weight of the two heaviest sticks divided by the combined weight of the two lightest sticks. No deductions are made for weight ratios less than 1.15.

(c) Cooked state means the state of the product after cooking in accordance with the instructions accompanying the product. However, if specific instructions are lacking, the product for inspection is cooked as follows: Transfer the product, while still in frozen state, onto a flat pan or sheet of sufficient size to accommodate 10 sticks spaced at least ¼ inch apart. Place the pan and frozen contents in a properly ventilated oven preheated to 400° F. until thoroughly cooked (about 15 to 18 minutes or to an internal temperature of 160° F.).

(d) Examination of sample, cooked state:

(1) "Distortion" refers to the degree of bending of the long axis of the stick. Distortion is measured as the greatest deviation from the long axis. Deductions are not made for deviations of less than ¼ inch.

(2) "Color" refers to the reasonably uniform color typical of the sample material.

(3) "Coating defects" refers to breaks, lumps, ridges, depressions, blisters or swells and curds in the coating of the cooked product. Breaks in the coating are objectionable bare spots through which the fish flesh is plainly visible. Lumps are objectionable outcroppings of breading on the stick surface. Ridges are projections of excess breading at the edges of the fish flesh. Depressions are objectionable visible voids or shallow areas which are lightly covered by breading. Blisters are measured by the swelling or exposed area in the coating resulting from the bursting or breaking of the coating. Curd refers to crater-like holes in the breading filled with coagulated albumin. Instances of these defects are measured by a plastic grid marked off in ¼-inch squares (¼ square inch). Each square is counted as one whether it is full or fractional.

(4) "Blemishes" refers to skin, blood spots, or bruises, objectionable dark fatty flesh, carbon specks or extraneous material. Instances of blemishes refers to each occurrence measured by placing a plastic grid marked off in ¼-inch squares (¼ square inch) over the defect area. Each square is counted as one whether it is full or fractional.

(5) "Bones" means the presence of potentially harmful bones in a stick. A potentially harmful bone is one that after being cooked is capable of piercing or hurting the palate.

(6) "Texture defects of the coating" refers to the absence of the normal tex-

tural properties of the coating which are crispness and tenderness. Coating texture defects are dryness, sogginess, mushiness, doughiness, toughness, pastyness, as sensed by starchiness or other sticky properties felt by mouth tissues; oiliness to the degree of impairment of texture; and/or mealiness.

(7) "Texture defects of the fish flesh" refers to the absence of normal textural properties of the cooked fish flesh, which are tenderness, firmness, and moistness without excess water. Texture defects of the flesh are dryness, softness, toughness, and rubberiness.

(e) General definitions:

(1) "Small" (overall assessment) refers to a condition that is noticeable but is not seriously objectionable.

(2) "Large" (overall assessment) refers to a condition that not only is noticeable but is seriously objectionable.

(3) "Minor" (individual assessment) refers to a defect that slightly affects the appearance and/or utility of the product.

(4) "Major" (individual assessment) refers to a defect that seriously affects the appearance and/or utility of the product.

(f) "Minimum fish flesh content—end-product determination" refers to the minimum percent, by weight, of the average fish flesh content of three frozen fried fish sticks (sample unit for fish flesh determination), as determined by the following method:

(1) *Equipment needed.* (i) Water bath (for example, a 3- to 4-liter beaker).

(ii) Balance accurate to 0.1 gram.

(iii) Clip tongs of wire, plastic, or glass.

(iv) Stop-watch or regular watch readable to a second.

(v) Paper towels.

(vi) Spatula, 4-inch blade with rounded tip.

(vii) Nut pick.

(viii) Thermometer (immersion type) accurate to ±2° F.

$$\% \text{ fish flesh} = \frac{\text{Weight of fish flesh (vi)}}{\text{Weight of three fried fish sticks (i)}} \times 100$$

(g) "Minimum fish flesh content—on-line determination" refers to the minimum percent fish flesh, by weight, of the average weight of three groups of five fish sticks (sample unit for fish flesh determination), as determined by the following:

(1) *Equipment needed*—balance accurate to 0.1 gram.

(2) *Procedure:*  
(i) Weigh three groups of five raw unbreaded fish sticks from the line. These weights should be recorded and averaged (average weight of three groups of five sticks) and percent fish flesh calculated

(2) *Procedure.* (i) Calculate the weight of three frozen fried fish sticks by dividing the declared net weight on the label by the number of fish sticks indicated on the label to obtain the weight of an individual fish stick and multiply by three. If the number of fish sticks contained in the package is not declared on the label, the actual weight of three frozen fried fish sticks shall be used.

(ii) Using tongs, place each stick individually in the water bath maintained at 63° F. to 120° F. and allow to remain until the breading becomes soft and can easily be removed from the still frozen fish flesh (between 10 to 110 seconds for sticks held in storage at 0° F.).

(iii) At the end of the immersion, remove the fish stick from the water and blot the stick lightly with double thickness paper toweling. This step should be completed in no more than 7 seconds.

(iv) Scrape and remove the breading material and batter from the fish flesh with the spatula removing the softened breading material and batter from the narrow sides and ends of the stick on the initial movements, followed by removing the material from the wider flat surfaces.

(v) Residual batter and breading may remain on some sticks prepared using batters that are difficult to remove after one dipping. When this occurs redip the partially "debreaded" stick in 63° to 86° F. (room temperature) water for approximately 2 seconds. Follow step 3 toweling, and remove the softened residual batter and breading material.

(vi) Weigh all the "debreaded" fish sticks.

(vii) Calculate the percent fish flesh in the sample unit by the following formula:

Immediately after the average weights are determined.

(ii) Calculate the percent fish flesh in the sample unit by using the average weight of three groups of five unbreaded fish sticks and the declared net weight of five fried fish sticks. The declared net weight of five fried fish sticks is obtained by dividing the net weight declaration on the label by the number of fish sticks declared on the label and multiplying by 5. If the number of fish sticks is not declared on the label, the actual weight of five fried fish sticks shall be used.

$$\% \text{ fish flesh} = \frac{\text{Weight of fish flesh (sample unit (i))}}{\text{Declared or actual net weight of five fried fish sticks}} \times 100$$

*NOTE:* The percent fish flesh determined by the on-line method will usually differ from the percent fish flesh determined by the end-product method due to processing and variations associated therewith.

(iii) Frequency of on-line fish flesh content determination. A minimum of three determinations of fish flesh content shall be carried out for small production runs or lots, i.e., 3 x (three groups of five unbreaded fish sticks). For larger productions runs or lots, a minimum of one determination, i.e., 1 x (three groups of five unbreaded fish sticks) shall be carried out for every hour of production of product units of the same weight.

§ 264.372 Use of alternate methods for determining fish flesh content.

(a) The official end-product method in § 264.371(f) for determining fish flesh content shall be used for lot and appeal inspections, and for inspections for verification in official establishments when the on-line method is used.

(b) The on-line method in § 264.371(g) for determining fish flesh content may be used in official establishments during processing operations.

§ 264.375 Tolerances for certification of officially drawn samples.

The sample rate and grade of specific lots shall be certified in accordance with Part 260, Subpart A of this chapter (Regulations Governing Processed Fishery Products).

#### Subpart G—United States Standards for Grades of Frozen Fried Fish Portions

##### § 264.401 Description of the product.

Frozen fried fish portions are clean, wholesome, uniformly shaped, unglazed masses of cohering pieces (not ground) of fish flesh coated with breading and partially cooked. The portions are cut from frozen fish blocks; are coated with a suitable, wholesome batter and breading; are fried, packaged, and frozen in accordance with good manufacturing practices. They are maintained at temperatures necessary for preservation of the product. Frozen fried fish portions weigh more than 1½ ounces and are at least three-eighths of an inch thick. All portions in an individual package are prepared from the flesh of one species of fish.

##### § 264.402 Composition of the product.

(a) Frozen fried fish portions shall contain 65 percent by weight of fish flesh determined by the official end-product method as set forth in § 264.421(f). Fish flesh content may be determined by the on-line method as set forth in § 264.421(g). Provided, That the results are consistent with the fish flesh content requirement of 65 percent by weight, when verified by the official end-product method.

(b) Production methods employed in official establishments shall be kept relatively constant for each production lot so as to minimize variation in any factors which may affect the relative fish flesh content.

##### § 264.403 Grades.

(a) "U.S. Grade A" is the quality of frozen fried fish portions that (1) possess good flavor and odor and (2) rate a total score of not less than 85 points for those factors of quality that are rated

in accordance with the scoring system outlined elsewhere in this part.

(b) "U.S. Grade B" is the quality of frozen fried fish portions that (1) possess at least reasonably good flavor and odor and (2) rate a total score of not less than 70 points for those factors of quality that are rated in accordance with the scoring system outlined in this part.

(c) "Substandard" is the quality of frozen fried fish portions that meet the requirements of § 264.401 Description of product, but otherwise fail to meet the requirements of "U.S. Grade B."

##### § 264.411 Determination of the grade.

The grade is determined by examining the product in the frozen and cooked states and is evaluated by considering the following factors:

(a) Factors rated by score points. Points are deducted for variations in the quality of each factor in accordance

with the schedule in Table 1. The total of points deducted is subtracted from 100 to obtain the score. The maximum score is 100; the minimum score is 0.

(b) Factors not rated by score points. The factor of "flavor and odor" is evaluated organoleptically by smelling and tasting, after the product has been cooked in accordance with § 264.421.

(1) Good flavor and odor (essential requirements for a Grade A product) means that the cooked product has the typical flavor and odor of the indicated species of fish and of the breading and is free from rancidity, bitterness, staleness, and off-flavors and off-odors of any kind.

(2) Reasonably good flavor and odor (minimum requirements of a Grade B product) means that the cooked product is lacking in good flavor and odor but is free from objectionable off-flavors and off-odors of any kind.

TABLE 1—SCHEDULE OF POINT DEDUCTIONS PER SAMPLE UNIT OF 10 PORTIONS

FROZEN STATE			
Factors scored	Method of determining score		Deduct
1 Condition of package	Small degree: Loose free oil, and/or moderate loose breading and/or moderate frost. Large degree: Oil soaking through package and/or excessive loose breading and/or excessive amount frost.		3
2 Ease of separation	Minor: Hand separated with difficulty.—Each affected. Major: Separated only by knife or other instrument.—Each affected.		2
3 Broken portion	Break or cut greater than ¼ length or width.—Each affected.		10
4 Damaged portion	Mashed, mechanically and/or physically injured, misshaped or mutilated. Minor: 1 to 3 instances.—Each affected. Major: Over 3 instances.—Each affected.		2
5 Uniformity: Size	Deviation in length or width between the 2 largest and 2 smallest portions is: Up to ¼ inch..... Over ¼ inch and up to ½ inch..... Over ½ inch.....		0
6 Weight	Weight ratio of the 2 heaviest divided by the 2 lightest portions: Over 1.0; not over 1.20..... Over 1.20; not over 1.3..... Over 1.3; not over 1.4..... Over 1.4.....		0
COOKED STATE			
7 Distortion	Major: Bending, shrinking, twisting (¼ to ½ inch).—Each affected. Minor: Excessive bending, shrinking, twisting (over ½ inch).—Each affected.		1
8 Color	Minor: Portions differing slightly from average color of portions in sample unit.—Each affected. Major: Portions excessively darker or lighter from average color of portions in sample unit.—Each affected.		4
9 Coating defects	Bare spots, blistering, ridges, breaks, curds. Minor: 1 to 3 instances.—Each affected. Major: Over 3 instances.—Each affected.		1
10 Blemishes	Skin, blood spots, bruises, discolorations. Minor: 1 to 6 instances.—Each affected. Major: Over 6 instances.—Each affected.		1
11 Bones	Portions containing bones (potentially harmful).—Each affected.		10
12 Texture: Coating	Small degree: Moderately dry soggy, doughy, oily and/or tough. Large degree: Farinaceous (mealy), pasty, very tough and/or oily.		0
13 Fish flesh	Small degree: Moderately dry, soft, mushy. Large degree: Dry to the point of fibrousness, very mushy, tough, and/or rubbery.		0

<sup>1</sup> An instance—each ¼ square inch (¼-inch square).

##### 264.421 Definitions.

(a) Selection of the sample unit:

The sample unit shall consist of 10 frozen fried fish portions take at random from one or more packages as required. The portions are spread out on a flat pan or sheet and are examined according to Table 1. Definitions of factors for point deductions are as follows:

(b) Examination of sample, frozen state:

(1) "Condition of package" refers to the presence in the package of free excess oil and/or loose breading and/or loose frost.

(2) "Ease of separation" refers to the difficulty of separating portions from each other or from packaging material that are frozen together after the frying operation and during the freezing.

(3) "Broken portion" means a portion with a break or cut equal to or greater than one-half the width or length of the portion.

(4) "Damaged portion" means a portion that has been mashed, physically or mechanically injured, misshaped or mutilated to the extent that its appearance is materially affected. The amount of damage is measured by using a grid composed of squares ¼ inch (that is, squares with an area of ¼ square inch each) to measure the area of the portion affected. Deductions are not made for damage less than ¼ square inch.

(5) "Uniformity of size" refers to the degree of uniformity in length and width of the frozen portions. Deviations are measured from the combined lengths of the two longest minus the combined lengths of the two shortest and/or the combined widths of the two widest minus the combined widths of the two narrowest. Deductions are not made for overall deviations in length or width up to ¼ inch.

(6) "Uniformity of weight" refers to the degree of uniformity of the weights of the portions. Uniformity is measured by the combined weight of the two heaviest portions divided by the combined weight of the two lightest portions. No deductions are made for weight ratios less than 1.20.

(c) Cooked state means the state of the product after cooking in accordance with the instructions accompanying the product. However, if specific instructions are lacking, the product for inspection is cooked as follows: Transfer the product, while still in frozen state, onto a flat pan or sheet of sufficient size to accommodate 10 portions spaced at least ¼ inch apart. Place the pan and frozen contents in a properly ventilated oven preheated to 420° F. until thoroughly cooked (about 15 to 18 minutes or to an internal temperature of 160° F.).

(d) Examination of sample, cooked state:

(1) "Distortion" refers to the degree of bending of the long axis of the portions. Distortion is measured as the greatest deviation from the long axis. Deductions are not made for deviations of less than ¼ inch.

(2) "Color" refers to the reasonably uniform color within the sample unit.

(3) "Coating defects" refers to breaks, lumps, ridges, depressions, blisters or swells and curds in the coating of the cooked product. Breaks in the coating are objectionable bare spots through which the fish flesh is plainly visible. Lumps are objectionable outcroppings of breading on the portion surface. Ridges are projects of excess breading at the edges of the fish flesh. Depressions are objectionable visible voids or shallow areas which are lightly covered by breading. Blisters are measured by the swelling or exposed area in the coating resulting from the bursting or breaking of the coating. Curd refers to crater-like holes in the breading filled with coagulated albumin. Instances of those defects are measured by a plastic grid marked off in ¼-inch squares (¼ square inch). Each square is counted as 1 whether it is full or fractional.

(4) "Blemishes" refers to skin, blood spots or bruises, objectionable dark fatty flesh, carbon specks or extraneous material. Instances of blemishes refers to

each occurrence measured by placing a plastic grid marked off ¼-inch squares (¼ square inch) over the defect area. Each square is counted as 1 whether it is full or fractional.

(5) "Bones" means the presence of potentially harmful bones in a portion. A potentially harmful bone is one that after being cooked is capable of piercing or hurting the palate.

(6) "Texture defects of the coating" refers to the absence of the normal textural properties of the cooked coating which are crispness and tenderness. Coating texture defects are dryness, soggy, mushiness, doughiness, toughness, pastyness, as sensed by starchiness or other sticky properties felt by mouth tissues; oiliness to the degree of impairment of texture; and/or meanness.

(7) "Texture defects of the fish flesh" refers to the absence of the normal textural properties of the cooked fish flesh, which are tenderness, firmness, and moistness without excess water. Texture defects of the flesh are dryness, mushiness, toughness, and rubberiness.

(c) General definitions:

(1) "Small" (overall assessment) refers to a condition that is noticeable but is not seriously objectionable.

(2) "Large" (overall assessment) refers to a condition that not only is noticeable but also is seriously objectionable.

(3) "Minor" (individual assessment) refers to a defect that slightly affects the appearance and/or utility of the product.

(4) "Major" (individual assessment) refers to a defect that seriously affects the appearance and/or utility of the product.

(f) "Minimum fish flesh content—end-product determination" refers to the minimum percent, by weight, of the average fish flesh content of three frozen fried fish portions (sample unit for fish flesh determination), as determined by the following method:

(1) Equipment needed. (i) Water bath (for example, a 3- to 4-liter beaker).

(ii) Balance accurate to 0.1 gram.

(iii) Clip tongs of wire, plastic, or glass.

$$\% \text{ fish flesh} = \frac{\text{Weight of fish flesh (vi)}}{\text{Weight of three fried fish portions (i)}} \times 100$$

(g) "Minimum fish flesh content—on-line determination" refers to the minimum percent fish flesh, by weight, of the average weight of three groups of five fish portions (sample unit for fish flesh determination), as determined by the following:

(1) Equipment needed—balance accurate to 0.1 gram.

(2) Procedure:

(i) Weigh three groups of five raw unbreaded fish portions from the line. These weights should be recorded and averaged (average weight of three groups of five portions and percent fish flesh

$$\% \text{ fish flesh} = \frac{\text{Weight of fish flesh (sample unit (i))}}{\text{Declared or actual net weight of five fried fish portions}} \times 100$$

Noted: The percent fish flesh determined by the one-line method will usually differ from the percent fish flesh determined by the end-product method due to processing and variations associated therewith.

(iv) Stop watch or regular watch readable to a second.

(v) Paper towels.

(vi) Spatula, 4-inch blade with rounded tip.

(vii) Nut pick.

(viii) Thermometer (immersion type) accurate to ±2° F.

(2) Procedure. (i) Calculate the weight of three frozen fried fish portions by dividing the declared net weight on the label by the number of fish portions indicated on the label to obtain the weight of an individual fish portion and multiply by three. If the number of fish portions contained in the package is not declared on the label, the actual weight of three frozen fried fish portions shall be used.

(ii) Using tongs, place each portion individually in the water bath maintained at 63° F. to 120° F. and allow to remain until the breading becomes soft and can easily be removed from the still frozen fish flesh (between 10 to 110 seconds for portions held in storage at 0° F.).

(iii) At the end of the immersion, remove the fish portion from the water and blot the portion lightly with double thickness paper toweling. This step should be completed in no more than 7 seconds.

(iv) Scrape and remove the breading material and batter from the fish flesh with the spatula removing the softened breading material and batter from the narrow sides and ends of the portion on the initial movements, followed by removing the material from the wider flat surfaces.

(v) Residual batter and breading may remain on some portions prepared using batters that are difficult to remove after one dipping. When this occurs redip the partially "debreaded" portion in 63° to 86° F. (room temperature) water for approximately 2 seconds. Follow step 3 toweling, and remove the softened residual batter and breading material.

(vi) Weigh all the "debreaded" fish portions.

(vii) Calculate the percent fish flesh in the sample unit by the following formula:

(iii) Frequency of on-line fish flesh content determination. A minimum of three determinations of fish flesh content shall be carried out for small production runs or lots, i.e., 3 x (three groups of five unbreaded fish portions). For larger production runs or lots, a minimum of one determination, i.e., 1 x (three groups of five unbreaded fish portions) shall be carried out for every hour of production of product units of the same weight.

§ 264.122 Use of alternate methods for determining fish flesh content.

(a) The official end-product method in § 264.421(f) for determining fish flesh content shall be used for lot and appeal inspections, and for inspections for verification in official establishments when the on-line method is used.

(b) The on-line method in § 264.421(g) for determining fish flesh content may be used in official establishments during processing operations.

§ 264.125 Tolerances for certification of officially drawn samples.

The sample rate and grades of specific lots shall be certified in accordance with Part 260, Subpart A of this chapter (Regulations Governing Processed Fishery Products).

AUTHORITY: 7 U.S.C. 1621-1630.

Subpart A—United States Standards for Grades of Frozen Raw Headless Shrimp

§ 265.101 Product description.

Frozen raw headless shrimp are clean, wholesome, headless, shell-on shrimp of the regular commercial species. They are sorted for size, packed, and frozen in accordance with good commercial practice and are maintained at temperatures necessary for the preservation of the product.

§ 265.102 Grades.

(a) "U.S. Grade A" or "U.S. Fancy" is the quality of frozen raw headless shrimp

of a single commercial count that possess a good flavor and odor, that are of a reasonably uniform color, and that for those factors which are rated in accordance with the scoring system outlined in the following sections, the total score is not less than 90 points.

(b) "U.S. Grade B" or "U.S. Good" is the quality of frozen raw headless shrimp of a single commercial count that possess at least reasonably good flavor and odor, and that for those factors which are rated in accordance with the scoring system outlined in the following sections, the total score is not less than 80 points.

(c) "U.S. Grade C" or "U.S. Commercial" is the quality of frozen raw headless shrimp of a single commercial count that possesses at least reasonably good flavor and odor, and that for those factors which are rated in accordance with the scoring system outlined in the following sections, the total score is not less than 70 points.

(d) "Substandard" is the quality of frozen raw headless shrimp that fail to meet the requirements of "U.S. Grade C" or "U.S. Commercial."

§ 265.103 Sizes.

The average weight and number of shrimp per pound (count) of frozen raw headless shrimp are not factors of quality in determining the grade of the product. However the degree of conformity of the weights of the individual shrimp to the average weight of shrimp in the sample is rated since it is a factor affecting the utility of the product. Descriptive size names are not recommended. The commercial count (number per pound) and descriptive size names, if used, shall conform to one of the following categories:

Commercial count— Number of shrimp per pound	Number of shrimp per pound (average)		Descriptive size name
	Over—	Not over—	
Under 0.....		9.9	Extra colossal.
10-15.....	9.9	15.0	Colossal.
16-20.....	15.0	20.0	Extra jumbo.
21-25.....	20.0	25.0	Jumbo.
26-30.....	25.0	30.0	Extra large.
31-35.....	30.0	35.0	Large.
36-42.....	35.0	42.0	Medium large.
43-50.....	42.0	50.0	Medium.
51-60.....	50.0	60.0	Small.
61-70.....	60.0	70.0	Extra small.
Over 70.....	70.0		Tiny.

§ 265.111 Ascertaining the grade.

(a) General. In addition to considering other requirements outlined in the standards, the grade is ascertained by observing the product in the frozen, thawed, and cooked states and is evaluated by considering the following:

(1) Factors rated by score points. The quality of the product with respect to factors scored is expressed numerically. Factors rated by score points are: dehydration; deterioration; black spot on shell or loose membrane only; black spot on meat; broken, damaged, and pieces of shrimp; legs, loose shell, and flippers; heads and unacceptable shrimp; extraneous materials; uniformity of size; and the texture of the cooked product.

Cumulative point deductions from the maximum possible score of 100 are assessed for variations of quality for each factor in accordance with the schedule in Table I. The minimum score is 0.

(2) Factor not rated by score points. The factor of "flavor and odor" is evaluated organoleptically after the product has been cooked in a suitable manner, and is defined as follows:

(i) Good flavor and odor. "Good flavor and odor" (essential requirement for a Grade A product) means that the product has the good flavor and odor characteristic of freshly caught, chilled shrimp and is free from off-flavors and off-odors of any kind. The presence of iodoform-like flavor and odor is not to be construed as off-flavor and off-odor.

(ii) Reasonably good flavor and odor. "Reasonably good flavor and odor" (minimum requirement of Grade B and Grade C products) means that the product may be somewhat lacking in the good flavor and odor characteristic of freshly caught, chilled shrimp but is free from objectionable off-flavors and objectionable off-odors of any kind.

§ 265.121 Definitions and methods of analysis.

(a) "Count," or number of shrimp per pound, is determined by dividing the number of shrimp in the package by the actual net weight in pounds of the shrimp.

(b) "Net weight" of the shrimp is determined as follows:

(1) Equipment needed. (i) Container, 4-gallon or more capacity;

(ii) Source of running water that can be maintained at 75°-85° F.; with hose of sufficient length to reach the bottom of the container.

(iii) Balance accurate to 0.01 ounce, or 0.1 gram;

(iv) U.S. standard wire sieve, ASTM No. 20, 12-inch diameter.

(2) Procedure. Place the frozen shrimp in the 4-gallon container into which fresh water of a temperature from 75° to 85° F. is introduced from the bottom at a flow of approximately 6 gallons per minute. After any glaze has been removed and the shrimp separate easily, empty the contents of the container through the tared sieve, spreading the shrimp out evenly. Tilt the sieve at approximately a 45-degree angle to facilitate drainage; drain the shrimp for 2 minutes; and then weigh the sieve and contents. The net weight is the weight of the sieve and contents minus the weight of the sieve.

(c) "Cooked in a suitable manner" means that a thawed sample of the product has been cooked by the following method:

Place 2 to 4 ounces of peeled deveined and rinsed shrimp in a boilable plastic bag with ½ cup of salt solution (1 teaspoon salt dissolved in 1 pint or 2 cups of water). Add a 2-ounce stainless steel weight or snap a large clip on bottom of bag. Suspend the bag in a kettle of boiling water and return the water to a boil as rapidly as possible. (More than one sample may be cooked at a time, as long as the water will return to a boil within 2 minutes.) After the water is boiling, cook according to the following timetable:

Count of shrimp—Number per pound	Cooking time (minutes)
Up to 15.....	12
16 to 35.....	9
Over 35.....	6

Remove from bag, drain, and cool to approximately room temperature (do not refrigerate) for evaluation of flavor and odor.

(d) "Dehydration" refers to the occurrence of a whitish area on the exposed ends of the shrimp, due to the drying of the affected area, and to a generally desiccated appearance of the meat after the shell is removed.

(e) "Deterioration" refers to any detectable change from the normal good quality of freshly caught shrimp. It is evaluated by noting deviations of the odor of the thawed product from the normal odor of freshly caught shrimp.

(1) "Slight deterioration" means that the shrimp lack the pleasant odor characteristic of freshly caught shrimp.

(2) "Moderate deterioration" means that the shrimp have slight off-odors.

(3) "Marked deterioration" means that the shrimp have definite off-odors, but are not spoiled.

(4) "Excessive deterioration" means that the shrimp have a definite odor of spoilage. Deductions in this category are made for individual shrimp which are affected.

(f) "Black spot on the shell or loose membrane only" refers to blackened areas at least moderately affecting the appearance of the shrimp.

(1) "Moderately affecting" means that the black spot which occurs at the shell joints extends at least one-third of the circumference of the shrimp at the particular location at which it occurs, and black spot which occurs as a circular area exceeds one-eighth inch in diameter for 31/35 count shrimp or is proportionately larger or smaller for respectively larger or smaller shrimp.

(g) "Black spot on the meat" refers to any darkened area that is present on the shrimp flesh.

(h) "Broken" refers to a shrimp having a break in the flesh greater than one-third of the thickness of the shrimp at the particular location at which it occurs.

(i) "Damaged" refers to a shrimp that is crushed or mutilated so as to materially affect its appearance.

(j) "Piece" refers to any portion of shrimp that contains less than five segments.

(k) "Legs" refers to walking legs only, not swimmerets, or to portions of the head (cephalothorax) with legs and which may be either loose or attached to a shrimp.

(l) "Loose shell" refers to any piece of shell which is completely detached from the shrimp except paper-thin shell from soft-shelled shrimp.

(m) "Flipper" refers to a tail fin,

sometimes including the last shell segment but containing no meat.

(n) "Head" means any portion of head (cephalothorax) large enough to contain an eye and which may be either loose or attached to a shrimp.

(p) "Extraneous material" means any material in the package which is not shrimp material.

(q) "Uniformity of size" is evaluated by computing the actual count per pound of the shrimp in the sample, and then determining, by weighing individual shrimp, the number of shrimp that are slightly large, slightly small, exceedingly large, or exceedingly small for that particular count per pound.

(1) "Slightly large" means that a shrimp is more than 25 percent, but not more than 35 percent larger, by weight, than a shrimp of the actual count per pound.

(2) "Exceedingly large" means that a shrimp is more than 35 percent larger, by weight, than a shrimp of the actual count per pound.

(3) "Slightly small" means that a shrimp is more than 25 percent, but not more than 35 percent smaller, by weight, than a shrimp of the actual count per pound.

(4) "Exceedingly small" means that a shrimp is more than 35 percent smaller, by weight, than a shrimp of the actual count per pound. For use in computing the uniformity of size factor, weights of individual shrimp are given in Table II.

(r) "Texture" defect refers to an undesirable toughness and/or dryness and/or mushiness of the shrimp examined in the cooked state.

§ 265.125 Tolerances for certification of officially drawn samples.

The sample rate and grades of specific lots shall be certified in accordance with Part 260, Subpart A of this chapter (Regulations Governing Processed Fishery Products).

With respect to conformance with the declared commercial count, the lot shall be considered to be of the declared count if the number of deviant units in the sample does not exceed the acceptance number prescribed for the sample size in Part 260, Subpart A of this chapter. If a lot fails to meet the requirements of any specific commercial count, it shall be marked a mixed lot and shall not be graded.

(o) "Unacceptable shrimp" refers to abnormal or diseased shrimp.

§ 265.131 Score sheet for frozen raw headless shrimp.

#### Subpart B—United States Standards for Grades of Frozen Raw Breaded Shrimp

##### § 265.151 Product description.

Frozen raw breaded shrimp are whole, clean, wholesome, headless, peeled shrimp which have been deveined where applicable of the regular commercial species, coated with a wholesome, suitable batter and/or breading. Whole shrimp consist of five or more segments of unutilized shrimp flesh. They are prepared and frozen in accordance with good manufacturing practice and are maintained at temperatures necessary for the preservation of the product. Individual shrimp and/or pieces consolidated into larger units and covered with breading are not considered for grading under this standard.

##### § 265.152 Composition of the product.

(a) Frozen raw breaded shrimp shall contain not less than 50 percent by

weight of shrimp material when the weight of the shrimp material is determined by the end product method as set forth in § 265.171(u).

(b) Shrimp material content of raw breaded shrimp may be determined by the on-line method as set forth in § 265.171(v): *Provided*, That the results are at least in compliance with the shrimp material content requirement of 50 percent by weight when verified by the official end product method.

(c) Production methods employed in official establishments shall be kept relatively constant for each product lot so as to minimize variations in any factor which may affect the relative shrimp material content.

##### § 265.153 Styles.

(a) *Style I*. "Regular Breaded Shrimp" are frozen raw breaded shrimp containing a minimum of 50 percent of shrimp material.

(b) *Style II*. "Lightly Breaded Shrimp" are frozen raw breaded shrimp containing a minimum of 65 percent of shrimp material.

##### § 265.154 Types.

(a) *Type I—Breaded fantail shrimp*—

(1) *Subtype A*. Split (butterfly) shrimp with the tail fin and the shell segment immediately adjacent to the tail fin.

(2) *Subtype B*. Split (butterfly) shrimp with the tail fin but free of all shell segments.

(3) *Subtype C*. Split (butterfly) shrimp without attached tail fin or shell segments.

(b) *Type II—Breaded round shrimp*—

(1) *Subtype A*. Round shrimp with the tail fin and the shell segment immediately adjacent to the tail fin.

(2) *Subtype B*. Round shrimp with the tail fin but free of all shell segments.

(3) *Subtype C*. Round shrimp without attached tail fin or shell segments.

(c) *Type III—Breaded split shrimp*. [Reserved]

##### § 265.155 Grades.

(a) "U.S. Grade A" is the quality of frozen raw breaded shrimp that when cooked possesses a good flavor and odor, and that for those factors which are rated in accordance with the scoring system outlined in the following sections the total score is not less than 85 points.

(b) "U.S. Grade B" is the quality of frozen raw breaded shrimp that when cooked possesses a reasonably good flavor and odor, and that for those factors which are rated in accordance with the scoring system outlined in the following sections the total score is not less than 70 points.

(c) "Substandard" is the quality of frozen raw breaded shrimp that fail to meet the requirements of "U.S. Grade B."

##### § 265.161 Ascertaining the grade.

*General*. In addition to considering other requirements outlined in the standard, the following quality factors are evaluated in ascertaining the grade of the product.

(a) Factors not rated by score points: Flavor and odor. Flavor and odor are determined by organoleptic means after the product has been cooked in a suitable manner (§ 265.171(w)).

(b) Factors rated by score points: The quality of the product with respect to factors scored is expressed numerically on the scale of 100. Deductions from the maximum possible score of 100 are assessed for essential variations of quality within each factor. The score of frozen raw breaded shrimp is determined by observing the product in the frozen and thawed states.

§ 265.162 Factors evaluated on the product in the breaded state.

(a) Factors affecting qualities that are measured on the product in the breaded state are uniformly of size, condition of coating, extraneous material, and damaged breaded shrimp. For the purpose of rating the factors that are scored in the breaded state, the schedule of point deduction in table 1 applies. This schedule of point deductions is

I

based on the examination of one complete individual package or intended package (sample unit) regardless of the net weight of the contents of the package.

(b) The factor—ease of separation in the frozen state—shall be rated in addition to all other factors when frozen raw breaded shrimp is lot inspected on a lot basis.

§ 265.163 Factors evaluated on unbreaded or thawed debreaded product.

Factors affecting qualities that are measured on the product in the unbreaded or thawed debreaded state are degree of deterioration, dehydrations, sand veins, black spot, extra shell, extraneous material, and swimmerets. For the purpose of rating the factors that are scored in the unbreaded or thawed debreaded state, the schedule of point deductions in table 2 applies. This schedule of point deductions is based on the examination of 20 whole shrimp selected from the processing line or from one or more packages. Examination of this sample of 20 whole shrimp is continued under § 265.171(u).

§ 265.164 Hygienic processing.

Frozen raw breaded shrimp shall be processed and maintained in accordance with the applicable requirements of the Good Manufacturing Practice Regulations contained in Part 128 of Title 21, CFR, and the applicable requirements contained in Part 260, Subpart A of this chapter.

§ 265.171 Definitions and methods of analysis.

(a) "Fantail shrimp": This type is prepared by splitting and peeling the shrimp except that for subtype A, the tail fin remains attached and the shell segment immediately adjacent to the tail fin remains attached. Subtype B, the tail fin remains, but the shrimp are free of all shell segments. Subtype C, the shrimp are free of tail fins and all shell segments.

(b) "Round shrimp": This type is the round shrimp, not split. The shrimp are peeled except that for subtype A, the tail fin remains attached and the shell segment immediately adjacent to the tail fin remains attached. Subtype B, the tail fin remains, but the shrimp are free of all shell segments. Subtype C, the shrimp are free of all shell segments and tail fins.

(c) Good flavor and odor: "Good flavor and odor", essential requirements for a Grade A product, means that the cooked product has flavor and odor characteristics of freshly caught or well-refrigerated shrimp and the breading is free from staleness and off-flavors and off-odors of any kind. Iodoform is not to be considered in evaluating the product for flavor and odor.

(d) Reasonably good flavor and odor: "Reasonably good flavor and odor" minimum requirements of Grade B products, means that the cooked product

may be somewhat lacking in the good flavor and odor characteristics of freshly caught or well-refrigerated shrimp but is free from objectionable off-flavors and objectionable off-odors of any kind.

(e) "Dehydration" refers to the occurrence of whitish areas on the exposed ends of the shrimp (due to the drying of the affected area) and to a generally desiccated appearance of the meat after the breading is removed.

(f) "Deterioration" refers to any detectable change from the normal good quality of freshly caught shrimp. It is evaluated by noting in the thawed product deviations from the normal odor and appearance of freshly caught shrimp.

(g) "Extraneous material" consists of nonedible material such as sticks, seaweed, shrimp thorax, or other objects that may be accidentally present in the package.

(h) Slight: "Slight" refers to a condition that is scarcely noticeable but does affect the appearance, desirability, and/or eating quality of breaded shrimp.

(i) Moderate: "Moderate" refers to a condition that is conspicuously noticeable but that does not seriously affect the appearance, desirability, and/or eating quality of the breaded shrimp.

(j) Marked: "Marked" refers to a condition that is conspicuously noticeable and that does seriously affect the appearance, desirability, and/or eating quality of the breaded shrimp.

(k) Excessive: "Excessive" refers to a condition that is very noticeable and is seriously objectionable and the product cannot be graded above Grade B; this is a limiting rule.

(l) Halo: "Halo" means and easily recognized fringe of excess batter and breading extending beyond the shrimp flesh and adhering around the perimeter or flat edges of a split (butterfly) breaded shrimp.

(m) Balling up: "Balling up" means the adherence of lumps of the breading material to the surface of the breaded coating, causing the coating to appear rough, uneven, and lumpy.

(n) Holidays: "Holidays" means voids in the breaded coating as evidenced by bare or naked spots.

(o) Damaged frozen raw breaded shrimp: "Damaged frozen raw breaded shrimp" means frozen raw breaded shrimp that have been separated into two or more parts or that have been crushed or otherwise mutilated to the extent that their appearance is materially affected.

(p) Black spot: "Black spot" means any blackened area that is markedly apparent on the flesh of the shrimp.

(q) Sand vein: "Sand vein" means any black or dark sand vein that has not been removed, except for that portion under the shell segment adjacent to the tail fin when present.

(r) Extra shell: "Extra shell" means any shell segment(s) or portion thereof, contained in the breaded shrimp except the first segment adjacent to the tail fin for Type I, subtype A, and Type II, subtype A.

(s) Net weight: Net weight is determined by use of a balance and by following steps given below:

1. Remove the overwrap.
2. Weigh carton and all contents.
3. Transfer breaded shrimp to balance and weigh.
4. Weigh carton less shrimp but including waxed separators and inserts (if used), crumbs, and frost.
5. Remove crumbs and frost from carton and separators.
6. Weigh cleaned carton and separators.
7. Net weight of the shrimp is the weight of the shrimp and of any loose breading and frost, exclusive of packaging material. The amount of loose breading and frost shall not exceed the limits of good manufacturing practices.

(t) Uniformity: "Uniformity" is determined for packs of various sizes by the ratio of the weights of the largest to the smallest breaded shrimp as outlined by the following schedule:

Up to 10 oz.	3 largest/3 smallest
10.1 oz. to 1.5 lb.	6 largest/6 smallest
1.51 lb. to 2.5 lb.	8 largest/8 smallest
Over 2½ lb.	10 largest/10 smallest

(u) Percent shrimp material—official end product method:

- (1) Equipment needed:
  - (i) Two-gallon container approximately 8 inches in diameter.
  - (ii) Two-vaned wooden paddle, each vane measuring approximately 1¼ inches by 8½ inches.
  - (iii) Stirring device capable of rotating the wooden paddle at 120 rpm.
  - (iv) Balance accurate to 0.01 ounce (0.1 gram).
  - (v) U.S. standard sieve—½-inch sieve opening; 12-inch diameter.
  - (vi) U.S. standard sieve—No. 20, 12-inch diameter.
  - (vii) Forceps, with blunt points.
  - (viii) Shallow baking pan.
  - (ix) Rubber policeman to remove bits of breading from shrimp.

(2) Procedure:

- (i) Weigh sample (20 shrimp) to be debreaded. Fill container three-fourths full of water at 70°–80° F. Suspend the paddle in the container leaving a clearance of at least 5 inches below the paddle vanes, and adjust speed to 120 rpm. Add shrimp and stir for 10 minutes. Stack the sieves, the ½-inch mesh over the No. 20 and pour contents of container onto them. Set the sieves under a faucet, preferably with spray attached, and rinse the shrimp without rubbing the flesh, being careful to keep all rinsings over the sieves and not having the stream of water hit the shrimp on the sieve directly. Use a rubber policeman to remove adhering breading. Lay the shrimp out singly on the sieve as rinsed, split side down and tails up. Remove top sieve and drain on a 45-degree angle for 2 minutes, then transfer shrimp to balance. Rinse contents of the No. 20 sieve onto a shallow baking pan and collect any particles of shrimp material (flesh, tail fin), and add to shrimp on balance and weigh.

(ii) Calculate percent shrimp material.

$$\text{Percent shrimp material} = \frac{\text{Weight of debreaded sample (20 shrimp)}}{\text{Weight of sample (20 shrimp)}} \times 100 + 2$$

(v) Percent shrimp material—on-line method: Percent shrimp material determined by the on-line method refers to the percent by weight of shrimp material in a sample as described below:

- (1) Equipment needed:
  - (i) Water bath (a container with a 3- to 4-liter capacity).
  - (ii) Balance accurate to 0.1 gram or 0.01 ounce.
  - (iii) Stop-watch or regular watch readable to a second.
  - (iv) U.S. Standard sieve—½-inch sieve opening; 12-inch diameter.
  - (v) U.S. Standard sieve No. 20, 12-inch diameter.
  - (vi) Thermometer (immersion type accurate to ±2° F.).
  - (vii) Forceps, with blunt points.
  - (viii) Shallow pan.
  - (ix) Rubber policeman to remove bits of breading from shrimp.
  - (2) Procedure:

(i) Select in a random manner, a composite sample of 20 unfrozen raw breaded shrimp from production line(s). Weigh the composite sample on a scale, determining the weight of the sample to the nearest 0.1 gram or 0.01 ounce. Place the sample in a water bath filled to three-fourths capacity and in a container maintained at 60° F.–85° F. After shrimp are submerged in water and breading becomes soft, a "gentle" swirling action with hands may be applied to the shrimp to speed up the removal of the breading. Stack the sieves, the ½-inch mesh over the No. 20 and pour contents of container into them. Remove top sieve and drain on 45-degree angle for 2 minutes then transfer shrimp to balance. Rinse contents of No. 20 sieve onto a shallow pan and collect any particles of shrimp material (flesh, tail fin, etc.), and add to the shrimp on the balance and then weigh.

(ii) Calculate percent shrimp material:

$$\text{Percent shrimp material} = \frac{\text{Weight of debreaded sample}}{\text{Weight of sample}} \times 100$$

(iii) Frequency of on-line shrimp material content determination. A mini-

mum of three determinations of shrimp material content shall be carried out for small production runs or lots of the same style product, i.e., 3 x (20 unfrozen raw breaded shrimp). For larger production runs or lots of the same style product, a minimum of one determination, i.e., 1 x (20 unfrozen raw breaded shrimp) shall be carried out for every hour of production of product of the same style.

(w) Cooked in a suitable manner: "Cooked in a suitable manner" means cooked in accordance with the instructions accompanying the product. If, however, specific instructions are lacking, the product for inspection is cooked as follows:

(1) Transfer the breaded shrimp, while still frozen, in a wire mesh deep fry basket sufficiently large to hold the shrimp in a single layer without touching one another.

(2) Lower the basket into a suitable liquid oil or hydrogenated vegetable oil at 350°–375° F. Cook for 3 minutes, or until the shrimp attain a pleasing golden brown color.

(3) Remove basket from the oil and allow the shrimp to drain for 15 seconds. Place the cooked shrimp on a paper towel or napkin to absorb the excess oil.

§ 265.172 Use of alternate methods of shrimp material determination.

(a) The official end product method in § 265.171(u) for determining shrimp material content shall be used for lot inspection, appeal inspection, and inspection for verification in official establishments when the on-line method is used.

(b) The on-line method in § 265.171(v) (2) for determining shrimp material content may be used during processing operations.

§ 265.175 Tolerances for certification of officially drawn samples.

The sample rate and grades of specific lots shall be certified in accordance with Part 260, Subpart A of this chapter. (Regulations Governing Processed Fishery Products.)

TABLE 1—SCHEDULE OF POINT DEDUCTIONS FOR RATING IN BREADED STATE

Factor	Quality description	Deductions allowed
1. Ease of separation in the frozen state.	Separate easily after being removed from carton and exposed to room temperature for not more than 4 minutes. Separate easily after being removed from carton and exposed to room temperature for not more than 6 minutes. Does not separate easily after being removed from carton and exposed to room temperature for 6 minutes.	Points 8 6 10
2. Uniformity.	Ratio of weight of largest to smallest breaded shrimp in sample unit as defined under section 266.21 (T): Up to 1.50..... 1.51-1.80..... 1.81-2.00..... 2.01-2.40..... 2.41-2.80..... 2.81-3.20..... 3.21-3.60..... Over 3.60.....	0 1 2 3 4 5 6 7 8 9 10
3. Condition of coating.	Degree of halo or ballooning up or holidays (identify type of defect by circling the proper word): Slight—each 20 percent by count or fraction thereof..... Moderate—each 20 percent by count or fraction thereof..... Marked—each 20 percent by count or fraction thereof..... Excessive—each 20 percent by count or fraction thereof.....	1 2 3 4
4. Damaged breaded shrimp.	For each 5 percent by count or fraction thereof..... Tail fin broken or missing each 5 percent or fraction thereof (except in Type I, subtype C, and Type II, subtype C).	1 3
5. Extraneous material.	If extraneous material, except filthy or deleterious substances, is found in more than one package per lot, the entire lot shall be declared substandard. <sup>1</sup>	10

<sup>1</sup> Filthy or deleterious substances in food products constitute a violation of the Food, Drug, and Cosmetic Act. Products containing such substances are ineligible for the purpose of applying this document.

TABLE 2—SCHEDULE OF POINT DEDUCTIONS FOR EXAMINATION IN UNBREADED OR THAWED DEBREADED STATE.  
(Subtotals brought forward)

Factor	Quality description	Deductions allowed
1. Degree of dehydration.	Slight—each shrimp..... Moderate—each shrimp..... Marked—each shrimp..... Excessive—each shrimp.....	Points 1 2 3 10
2. Deterioration.	Slight—each shrimp..... Moderate—each shrimp..... Marked—each shrimp..... Excessive—each shrimp (provided that, if excessive deterioration occurs in more than one sample unit per sample, the entire lot shall be declared substandard).	2 3 4 20
3. Sand veins where applicable.	For each dark vein present deduct according to the following schedule: Equivalent in length to two segments..... Equivalent in length to three segments..... Equivalent in length to four or more segments.....	1 2 3
4. Black spot.	Slight but obvious, on average..... Moderate, on average..... Marked—each shrimp.....	1 2 10
5. Extra shell (see subtypes definition).	(Beyond first segment adjacent to tail fin only for Type I, subtype A, and Type II, subtype A): Less than one whole extra shell segment..... One extra segment or more.....	1 2
6. Swimmerets.	For last pair only adjacent to tail fins..... For more than last pair.....	1 2
7. Extraneous material.	If extraneous material, except filthy or deleterious substances, are found in more than one package per lot, the entire lot shall be declared substandard. <sup>2</sup>	10

<sup>1</sup> Deduction points for sand veins shall not be applied to shrimp smaller than 70 count per pound in the raw, headless state. The corresponding size in the breaded state is 40 count per pound and 80 count per pound in the peeled state.

<sup>2</sup> Filthy or deleterious substances in food products constitute a violation of the Food, Drug, and Cosmetic Act. Products containing such substances are ineligible for the purpose of applying this document.

AUTHORITY: 7 U.S.C. 1621-1630.

#### § 266.101 Description of the product.

Frozen raw scallops are clean, wholesome, adequately drained, whole or cut adductor muscles of the scallop of the regular commercial species. The portion of the scallop used shall be only the adductor muscle "eye" which controls the shell movement. Scallops shall be washed, drained, packed, and frozen in accordance with good manufacturing practices and are maintained at temperatures necessary for the preservation of the product. Only scallops of a single species shall be used within a lot.

#### § 266.102 Styles.

(a) *Style I. Solid pack* scallops are frozen together into a solid mass.

- (1) *Substyle a. Glazed.*  
(2) *Substyle b. Not glazed.*  
(b) *Style II. Individually quick-frozen pack (IQF)* scallops are individually quick frozen. Individual scallops can be separated without thawing.

- (1) *Substyle a. Glazed.*  
(2) *Substyle b. Not glazed.*

#### § 266.103 Types.

- (a) *Type 1. Adductor muscle.*  
(b) *Type 2. Adductor muscle with catch (gristle or sweet meat) portion removed.*

#### § 266.104 Grades.

(a) "U.S. Grade A" is the quality of frozen raw scallops that (1) possess good flavor and odor and that (2) for those factors that are rated in accordance with the scoring system outlined in this part, have a total score of 85 to 100 points.

(b) "U.S. Grade B" is the quality of frozen raw scallops that (1) possess at least reasonably good flavor and odor, and that (2) rate a total score of not less than 70 points for these factors of quality that are rated in accordance with the scoring system outlined in this part.

(c) "Substandard" is the quality of frozen raw scallops that meets the requirements of § 266.101, *Description of the product*, but otherwise fails to meet the requirements of "U.S. Grade B."

#### § 266.111 Determination of the grade.

In a plant under Contract USDC inspection, the grade is determined by examining the product for factors 1-5 in the fresh or thawed state and Factor 6 in the cooked state. For lot inspection, examination of the product for Factor 1 is carried out in the frozen state and 2-5 in the thawed state. Factor 6 is examined in the cooked state.

(a) *Factors rated by score points.* Points are deducted for variation in the

quality of each factor in accordance with the schedule in Table 1. The total of points deducted is subtracted from 100 to obtain the score. The maximum score is 100, the minimum score is 0.

(b) *Factors not rated by score points.* The factor of "Flavor and odor" is evaluated organoleptically by smelling and tasting the product in the cooked state.

(1) Good flavor and odor (essential requirements for a U.S. Grade A product) means that the product has the typical flavor and odor of the species and is free from bitterness, staleness, and off-flavor and off-odors of any kind.

(2) Reasonably good flavor and odor (minimum requirements for a U.S. Grade B product) means the product is lacking in good flavor and odor but is free from objectionable off-flavors and off-odors of any kind.

#### § 266.121 Definitions and methods.

(a) *Selection of the sample unit.* The sample unit shall consist of the primary container and its entire contents. The number and size of sample units to be examined shall be as indicated in § 266.125.

(b) *Examination of sample, frozen state.* When this product is examined under Contract USDC inspection, the samples are examined for Factor 1 in Table 1 in the fresh or thawed state. When the product is lot inspected, the samples are examined for Factor 1, in Table 1 in the frozen state.

TABLE 1—SCHEDULE OF POINT DEDUCTIONS PER SAMPLE

FROZEN STATE		
Factors scored	Method of determining score	Deduct
1 Dehydration	Small degree: Easily scraped off of each 10 percent of top surface affected. Large degree: Deep dehydration not easily scraped off, affecting each 10 percent of surface.	2 4
FRESH OR THAWED STATE		
3 Undesirable pieces.	Percent by weight: Up to 5 percent..... Over 5 percent—not over 10 percent..... Over 10 percent.....	3 6 10
4 Uniformity	Weight ratio: Over 2.5—not over 3.0..... Over 3.0—not over 3.3..... Over 3.3.....	4 6 10
4 Color	Each 10 percent by count of nonuniform colored scallops in excess of the 10 percent of nonuniform colored scallops permitted.	10
5 Extraneous material.	Minor: Each instance of minor extraneous material in the sample unit per pound. Major: Each instance of major extraneous material in the sample unit per pound.	1 5
COOKED STATE		
6 Texture	Firm but tender and moist. Small degree: Moderately tough, dry, and fibrous or mushy. Large degree: Excessively tough, dry and fibrous or mushy.	6 10

(1) "Dehydration" refers to the loss of moisture from the scallops surface during frozen storage. Small degree of dehydration is color-masking but can be

easily scraped off. Large degree of dehydration is deep, color-masking, and requires a knife or other instrument to scrape it off.

(c) *Examination of sample, thawed state.* When necessary, thawing the sample is best accomplished by enclosing it in a water impermeable film-type bag and immersing in an agitated water bath at 68° F.±2° F. The complete thawing of the product is determined by gently squeezing the bag occasionally until no hard core or ice crystals are felt.

(1) Undesirable small pieces are pieces which will pass through the openings in a 3/4-inch sieve for larger size scallops. For the smaller scallops, such as bay scallops, undesirable pieces are pieces of scallops that do not have the general conformation of the other scallops. The total weight of these pieces within a sample unit will be obtained. These pieces shall not be used for determining the weight ratio.

(2) Uniformity of size refers to the degree of weight uniformity of the individual scallops. This factor is measured by obtaining a weight ratio between the largest and smallest scallops. The determination is made on the thawed scallops by dividing the total weight of the 15 percent (by count) of the largest scallops by the 15 percent (by count) of the smallest scallops.

(3) "Color" refers to reasonably uniform color characteristics of the species used within an individual container. Only noticeable variation in color from the predominating color of the scallops in the container is considered. Medium gray to black colored scallops are not to be graded.

(4) "Extraneous materials" are pieces or fragments of undesirable material that are naturally present in or on the scallops and which should be removed during processing.

(1) An instance of minor extraneous material includes but is not limited to each occurrence of intestines, seaweed, etc., and each aggregate of sand and grit up to 1/2-inch square and located on the scallop surface. Deduction points shall be assessed for additional instances of intestines, seaweed, etc., and aggregates of sand and grit up to 1/2-inch square.

(2) An instance of major extraneous material includes but is not limited to each instance of shell or aggregate of embedded sand or other extraneous embedded material that affects the appearance or eating quality of the product.

(d) *Examination of sample, cooked state.* Cooked state means the state of the sample after being cooked. Boil in bag method: Place at least 25 percent by weight of the thawed sample from each sample unit into a boilable film-type pouch and seal. Submerge the pouch and its contents into boiling water for about 3 to 4 minutes or until cooked. Bake method: Alternatively the product is placed into a baking pan lined with aluminum foil. A cover of aluminum foil is crimped around the edges of the top of the pan. The pan is placed in an oven that has been pre-heated to 450° F. for 20 minutes or until cooking has been

completed. Flavor and odor and texture shall be evaluated in the cooked state.

(1) "Texture" refers to the firmness, tenderness, and moistness of the cooked scallop meat, which is characteristic of the species.

(e) *General definitions.* (1) "Small" (overall assessment) refers to a condition that is noticeable but is only slightly objectionable.

(2) "Large" (overall assessment) refers to a condition that not only is noticeable but is seriously objectionable.

(3) "Minor" (individual assessment) refers to a defect that slightly affects the appearance and/or utility of the product.

(4) "Major" (individual assessment) refers to a defect that seriously affects the appearance and/or utility of the product.

(5) "Net weight" means the total weight of the scallop meats within the package after removal of all packaging materials, ice glaze, or other protective materials.

§ 266.125 Tolerances for certification of officially drawn samples.

The sample rate and grades of specific lots shall be certified in accordance with Part 260, Subpart A of this chapter (Regulations Governing Processed Fishery Products).

#### Subpart B—United States Standards for Grades of Frozen Fried Scallops

##### § 266.151 Product description.

Frozen fried scallops are prepared from wholesome, clean, adequately drained, whole or cut adductor muscles sea scallop, or scallop units cut from a block of frozen sea scallops, that are coated with wholesome batter and breaded and precooked in oil or fat. They are packaged and frozen according to good commercial practice and are maintained at temperatures necessary for preservation. Frozen fried scallops contain a minimum of 60 percent by weight of scallop meat.

##### § 266.152 Styles.

The styles of frozen fried scallops include:

(a) *Style I Random pack.* Scallops in a package are reasonably uniform in weight and/or shape. The weight or shape of individual scallops are not specified.

(b) *Style II Uniform pack.* Scallops in a package consist of uniform shaped pieces which are of specified weight or range of weights.

##### § 266.153 Grades of frozen fried scallops.

(a) "U.S. Grade A" is the quality of frozen fried scallops that possess good flavor and odor; and for those factors of quality which are rated according to the scoring system outlined in this part, the total score is not less than 85 points.

(b) "U.S. Grade B" is the quality of frozen fried scallops that possess at least reasonably good flavor and odor; and for those factors of quality which are rated according to the scoring system outlined

RULES AND REGULATIONS

in this part, the total score is not less than 70 points.

(c) "Substandard" is the quality of frozen fried scallops that fail to meet the requirements of U.S. Grade B.

§ 266.161 Ascertaining the grade.

The grade of frozen fried scallops is determined by examining the product in the frozen and cooked states. Factors of quality evaluated in ascertaining the grade of the product are flavor and odor, appearance, uniformity, absence of defects, and character.

(a) Flavor and odor are rated directly by organoleptic evaluation. Score points are not assessed (see § 266.162).

(b) Appearance, uniformity, absence of defects, and character are rated numerically on a scale of 100. The maximum number of points that may be given each of these factors are:

Factors:	Points
Appearance	25
Uniformity	20
Workmanship defects	40
Character	15

Total possible score..... 100

<sup>1</sup> Frozen fried scallops which receive the maximum number of deduction points for any of these factors shall not be graded above Substandard regardless of the total score for the product. This is a limiting rule.

§ 266.162 Evaluating the unscored factor of flavor and odor.

(a) "Good flavor and odor" (essential requirements for a Grade A product) means that the cooked product has flavor and odor characteristics of good scallop meat and of the breading and is free from staleness and off-flavors and off-odors of any kind.

(b) "Reasonably good flavor and odor" (minimum requirements of a Grade B product) means that the cooked product is lacking in good flavor and odor, but is free from objectionable off-flavors and off-odors of any kind.

(c) "Substandard flavor and odor" (Substandard grade) means that the flavor and odor fails to meet the minimum requirements of "reasonably good flavor and odor."

§ 266.163 Evaluating and rating the scored factors of appearance, uniformity, workmanship defects, and character.

Point-deductions are allotted for each degree or amount of quality variation within each of the factors that are scored. The net score for each quality factor is obtained by subtracting the deduction-points assessed for that factor from the maximum points allotted to that factor. The total score for the product is the sum of the net scores for the four individually scored factors.

§ 266.164 Appearance.

(a) Appearance refers to the condition of the package and ease of separation in the frozen state and continuity and color in the cooked state.

(1) "Condition of the package" refers to freedom from packaging defects and

the presence in the package of oil, and/or loose breading, and/or frost. Deduction points are based on the degree of the improper condition as small or large.

(2) "Ease of separation" refers to the difficulty of separating scallops that are frozen together after the frying operation and during freezing.

(3) "Continuity" refers to the completeness of the coating of the product in the cooked state. Lack of continuity is exemplified by breaks, ridges and/or lumps of breading. Each 1/4 square inch area of any break, ridge, or lump of breading is considered an instance of lack of continuity. Individual breaks, ridges, or lumps of breading measuring less than 1/4 square inch are not considered objectionable. Deduction points are based on the percentage of the scallops within the package that contain small and/or large instances of lack of continuity.

TABLE I—SCHEDULE OF POINT DEDUCTIONS FOR VARIATIONS IN APPEARANCE

Appearance subfactors	Method of determining subfactor score		Deduction points	
	<i>Degree of condition of the package</i>			
Condition of the package in the frozen state.	(a) Small (moderate amount of free oil and/or loose breading, and/or frost, and/or packaging defects);		2	
	(b) Large (excessive amount of free oil, and/or loose breading, and/or frost, and/or packaging defects);		8	
		Percent of scallops affected		
		Over—	Not over—	
Ease of separation of the scallops in frozen state.	Moderate (scallops separated by hand with difficulty);	0	30	1
		30	70	2
		70	-----	3
	Severe (scallops separated only by use of knife or other instrument).	0	30	4
30		70	10	
70		-----	16	
Continuity of the scallops in the cooked state.	Lack of continuity (breaks, ridges, and lumps) <sup>1</sup> ..	0	20	3
		20	40	4
		40	70	6
	Small (1 to 3 instances per scallop).....	70	-----	10
0		20	4	
Large (over 3 instances per scallop).....		20	40	4
	40	70	12	
	70	-----	28	
	<i>Deviation from predominating color of fried scallops in cooked state</i>			
Color of the scallops in the cooked state.	Small instance of deviation in color means that the scallop varies noticeably from the predominating color of the package after cooking.	0	10	0
		10	30	2
		30	-----	4
	Large instance of deviation in color means that the scallop varies markedly from the predominating color of the package after cooking.	0	10	0
10		30	10	
30		-----	28	

<sup>1</sup> Each 1/4 square inch is considered an instance.

§ 266.165 Uniformity.

(a) Uniformity refers to the degree of freedom from undesirably small pieces and to the degree of uniformity of the weights of the frozen fried scallops within the package.

(1) For Style I, deduction points are assessed for (i) undesirable small pieces as determined by the percent by count of pieces passing through a sieve with 1/4 inch openings, and (ii) uniformity of

(4) "Color" refers to reasonably uniform color which is characteristic of the product in the cooked state.

Deviations in color are visually measured as "small" and "large". A "small" instance of deviation in color means that the scallop varies noticeably from the predominating color of the package. A "large" instance of deviation in color means that the scallop varies markedly from the predominating color of the package. The deduction points assessed are based on the degree of deviation as small or large and the percentage by count of the scallops affected in the package.

(b) For the purpose of rating the factor of appearance, the schedule of deduction points in Table I applies. Frozen fried scallops which receive 25 deduction points for the factor of appearance shall not be graded above Substandard regardless of the total score for the product. This is a limiting rule.

size of the scallops remaining in the sieve as determined by the ratio of the weight of the 15 percent largest scallops (minimum three) divided by the 15 percent smallest scallops (minimum three). The number constituting this percentage shall be the closest approximation of 15 percent, determined by count.

(2) For Style II, deduction points are based on the percentage by count of small or large scallops deviating from the average weight within the package.

RULES AND REGULATIONS

(b) For the purpose of rating the factor of uniformity, the schedules of deduction points in Table II apply. Frozen fried scallops which receive 20 deduction points for this factor shall not be graded above Substandard regardless of the total score for the product. This is a limiting rule.

TABLE II—SCHEDULE OF POINT DEDUCTIONS FOR UNIFORMITY

Factor	Method of determining subfactor score		Deduction points
Uniformity of size and weight of scallops in frozen state.			
	Percent of scallops affected		
	Over— Not over—		
	(a) Undesirable small pieces which pass through a sieve with $\frac{1}{4}$ inch openings.	0 10 10 20 20	3 6 10
	Ratio		
	Over— Not over—		
	(b) Weight ratio of scallops remaining in the sieve. The 15 percent largest scallops (minimum 3) divided by the 15 percent smallest scallops (minimum 3). The 15 percent to be determined by count.	2.0 2.5 2.5 2.9 2.9 3.3 3.3	0 1 3 6 10
	Percent of scallops affected		
	Over— Not over—		
	Deviation from average weight		
(a) Small (scallops deviating +10 to 20 percent from average weight).	0 30 30 70 70	3 5 10	
(b) Large (scallops deviating over +20 percent from average weight).	0 30 30 70 70	6 10 20	

§ 266.166 Workmanship defects.

(a) Workmanship defects refers to the degree of freedom from doubled and misshaped scallops, pieces of shell fragments and extraneous material. The defects of doubled and misshaped scallops are determined by examining the frozen product, whereas the defects of shell fragments and extraneous materials are determined by examining the product in the cooked state. Deduction points are based on the percentage by count of the scallops affected within the package, or the relationship between the number of defect instances and the number of scallops within the package.

(1) *Doubled scallops.* Two or more scallops that are joined together during the breading and/or frying operations.

(2) *Misshaped scallops.* Elongated, flattened, mashed or damaged scallop meats.

(3) *Extraneous material.* An instance of extraneous material refers to an occurrence or group of occurrences of extraneous material in a scallop. Extraneous material consists of sand, grit, intestines, seaweed, and substances foreign to the scallop meat, except for shell fragments.

(4) *Piece of shell fragment.* The presence in the scallops of any fragment of the scallop shell regardless of size.

(b) For the purpose of rating the factor of absence of defects the schedules of deduction points in Tables III and IV apply.

TABLE III—SCHEDULE OF POINT DEDUCTIONS FOR WORKMANSHIP DEFECTS SUBFACTORS MISSHAPED OR DOUBLED SCALLOPS AND SHELL FRAGMENTS

Defect subfactors	Method of determining subfactor score		Deduction points
Misshaped or doubled scallops in the frozen state.	Percent of scallops affected		
	Over—	Not over—	
Shell fragments in the cooked state.	Misshaped scallops (elongated, flattened, mashed or damaged scallop meats). Doubled scallops (two or more scallops joined together during breading and/or frying operation).	0 10 20	3 7 10
	Each piece of shell fragment is considered an instance.	0 5 10	10 30 40

TABLE IV—SCHEDULE OF POINT-DEDUCTIONS FOR WORKMANSHIP DEFECTS SUBFACTOR OF EXTRANEOUS MATERIAL

Number of scallops per 7 ounces	Number of instances of extraneous material							
	0	1	2	3	4	5	6	7 or more
10 or less	0	7	13	25	40	40	40	40
11	0	8	15	28	40	40	40	40
12	0	9	17	30	40	40	40	40
13	0	10	19	32	40	40	40	40
14	0	11	21	34	40	40	40	40
15	0	12	23	36	40	40	40	40
16	0	13	25	38	40	40	40	40
17	0	14	27	40	40	40	40	40
18	0	15	29	42	40	40	40	40
19	0	16	31	44	40	40	40	40
20 or more	0	17	33	46	40	40	40	40

## § 266.167 Character.

(a) Character refers to the texture of the scallop meat and of the coating and the presence of gristle in the cooked state. Deduction points are based on the degree of variation in the texture

attributes of the coating and scallop meat or the relationship between the number of instances and the number of scallops within the package.

(1) *Gristle*. An instance of gristle refers to an occurrence of the tough elastic tissue usually attached to the scallop meat.

(2) *Texture* refers to the firmness, tenderness, and moistness of the cooked scallop meat and to the crispness and tenderness of the coating of the cooked product. The texture of the scallop meat may be classified as a degree of mushiness, toughness, and fibrousness. The texture of the coating may be classified as a degree of pastiness, toughness, dryness, mushiness, or oiliness.

(b) For the purpose of rating the factor of character, the schedules of deduction points in Table V and VI apply. Frozen fried scallops which receive 15 deduction points for the factor of character shall not be graded above Sub-standard regardless of the total score for the product. This is a limiting rule.

TABLE V—SCHEDULE OF POINT-DEDUCTIONS FOR CHARACTER SUBFACTOR OF TEXTURE

Character subfactors	Method of determining subfactor score	Deduction points
Texture in the cooked state.	<i>Texture of the coating</i>	
	Firm or crisp but not tough, pasty, mushy, or oily	0
	Moderately tough, pasty, mushy, or oily	5
	Excessively tough, pasty, mushy, or oily	15
	<i>Texture of the scallop meat</i>	
	Firm, but tender and moist	0
	Moderately tough, dry, and/or fibrous or mushy	5
	Excessively tough, dry, and/or fibrous or mushy	15

TABLE VI—SCHEDULE OF POINT-DEDUCTIONS FOR CHARACTER SUBFACTOR OF GRISTLE

Number of scallops per 7 ounces	Number of instances of gristle							
	0	1	2	3	4	5	6	7 or more
10 or less	0	2	4	6	8	10	10	10
11	0	2	4	6	8	10	10	10
12	0	2	4	6	8	10	10	10
13	0	2	4	6	8	10	10	10
14	0	2	4	6	8	10	10	10
15	0	2	4	6	8	10	10	10
16	0	2	4	6	8	10	10	10
17	0	2	4	6	8	10	10	10
18	0	2	4	6	8	10	10	10
19	0	2	4	6	8	10	10	10
20 or more	0	2	4	6	8	10	10	10

## § 266.171 Definitions and methods of analysis.

(a) *Percent of scallop meat* refers to percent, by weight, of scallop meat in a sample as determined by the following method:

(1) *Equipment needed*. (i) Water bath (3 to 4 liter beaker).

(ii) Balance accurate to 0.1 gram.

(iii) Clip tongs of wire, plastic, or glass.

(iv) Stop-watch or regular watch with second hand.

(v) Paper towels.

(vi) Spatula, 4-inch blade with rounded tip.

(2) *Procedure*. (i) Weigh all scallops in the sample while still in a hard frozen condition.

(ii) Place each scallop individually in the water bath which is maintained at 63° to 86° F. and allow the scallop to remain until such time as the breading becomes soft and can easily be removed from the still frozen meat (between 10 to 30 seconds for scallops held in storage at 0° F.).

(iii) Remove the scallop from the bath; blot lightly with double thickness paper toweling; and scrape off or pick out coating from the scallop meat with the spatula or nutpicker.

(iv) Weigh all "debreaded" scallop meats.

(v) Calculate the percent of scallop meat in the sample by following formula:

$$\text{Percent scallop meat} = \frac{\text{Weight of scallop meats (iv)}}{\text{Weight of frozen fried scallops (i)}} \times 100$$

(b) *Cooked state*. Cooked state shall mean that the product shall be cooked in accordance with the instructions accompanying the product. If specific instructions are lacking, the product for inspection shall be cooked as follows: Spread the frozen scallops on a foil covered baking sheet or a shallow pan. Place sheet or pan and frozen contents at the mid point of a properly ventilated oven preheated to 400 degrees Fahrenheit until thoroughly cooked, 15 to 20 minutes.

(c) *Definitions*. (1) "Moderate" refers to a scored condition that is readily

noticeable but is not seriously objectionable.

(2) "Excessive" refers to a condition that is very noticeable and is seriously objectionable.

(3) "Instance" refers to an occurrence of an individual scored subfactor on a scallop.

§ 266.175 Tolerances for certification of officially drawn samples.

The sample rate and grades of specific lots shall be certified in accordance with Part 260, Subpart A of this chapter. (Regulations Governing Processed Fishery Products.)

COMPREHENSIVE  
MANPOWER PROGRAMS  
AND GRANTS TO AREAS  
OF HIGH UNEMPLOYMENT

V 421190 SEP 30 77

UMI

[4510-01]

## Title 29—Labor

## SUBTITLE A—OFFICE OF THE SECRETARY OF LABOR

## Comprehensive Manpower Programs and Grants to Areas of High Unemployment

AGENCY: Employment and Training Administration, Labor.

ACTION: Final rule.

**SUMMARY:** These rules are promulgated to amend the Comprehensive Employment and Training Act of 1973 (CETA) regulations. These changes reflect the experience gained during the first three years of implementation, clarify existing policies, and provide for new approaches to the grant process.

EFFECTIVE DATE: October 31, 1977.

FOR FURTHER INFORMATION CONTACT:

Roberts T. Jones, Director, Office of Community Employment Programs, U.S. Department of Labor, 601 D Street, NW., Washington, D.C. 20213. (202-376-6366).

**SUPPLEMENTARY INFORMATION:** Section 702(a) of CETA states that the Secretary may prescribe such rules and regulations as he deems necessary to carry out the purposes of CETA. Pursuant to this authority, the Department of Labor, Employment and Training Administration published in the July 8, 1977, FEDERAL REGISTER (42 FR 35318) proposed rulemaking to revise the regulations. At that time, the Department invited interested persons to submit comments on the proposed rulemaking to the Department by August 8, 1977. Approximately 75 letters containing comments were received by the Department. Each of the comments in these letters was carefully studied with respect to its merits and in relation to other comments received on the same or similar subjects. The following issues have been reviewed and/or revised in response to these comments received on the July 8, 1977, proposed rulemaking.

## DISCUSSION OF MAJOR ISSUES

## SECTION 94.4 DEFINITIONS

The Department received many letters commenting on the definition of "underemployed" in paragraph (ff). The commenters felt that the income criteria should be based on the lower living standard income level rather than the poverty level in order to be consistent with the income criteria for unemployed persons. Use of the poverty level is required by sec. 701(a)(11) of CETA, and therefore cannot be amended as suggested.

## SECTION 95.13 PLANNING PROCESS ADVISORY COUNCILS

Representation of the State Manpower Services Council (SMSC) on both the State Advisory Council on Vocational Education and the State Occupational Information Coordinating Committee

was the subject of several comments which suggested that the Governor be allowed to appoint a representative, rather than a member, of the SMSC to these bodies. The Department agrees with these commenters and has changed both § 95.13(d)(5) and 95.13(d)(6) to allow the Governor to appoint a representative of the SMSC to these organizations.

## SECTION 95.14 CONTENT AND DESCRIPTION OF THE GRANT APPLICATION

Most of the letters commended the new grant application package which divided the grant application into two components, a Prime Sponsor Agreement and an Annual Plan, and which proposed that only the Annual Plan need be changed each year. Various commenters, however, expressed the fear that some of the items called for in the Prime Sponsor Agreement will change over time, thus requiring continual modification. In consideration of these comments, these items will be reviewed for possible future transfer to the Annual Plan.

The concept of equitable service to demographic groups (age, race, and sex) of the unemployed population, which was set forth in § 95.14(c)(2)(i)(A), § 95.31(c), and § 96.28, of the proposed regulations, was interpreted by some commenters as providing an entitlement for service to particular segments of the population. Other commenters complained that these proposed regulations constituted a loss of prime sponsor prerogatives. The concept of equitable service is not intended to provide an entitlement but rather to insure that prime sponsor planning takes into account the needs of the various demographic segments of the prime sponsor's CETA eligible population. Prime sponsors, moreover, retain the responsibility for designating significant segments of their population for service.

Further, commenters expressed concern that these sections, since they focused on the unemployed, appeared to emphasize service to the underemployed and economically disadvantaged, with a possible shift of services away from traditionally targeted groups. These sections have been modified to recognize that service to the underemployed and economically disadvantaged in a particular demographic group might create variances in the level of services provided to that and other demographic groups.

## SECTION 95.12 ALLOWABLE FEDERAL COSTS

Several comments were received concerning the proposal to charge all planning council costs to title I. The commenters felt that this would require additional work, provide an inaccurate cost/effectiveness picture, and make unreasonable demands on title I funds. The proposal, which was contained in § 98.12(f)(6)(iii)(A), has been dropped.

## DISCUSSION OF OTHER SUGGESTIONS AND CHANGES

Many of the comments included editorial suggestions. When, in the consideration of the Department, these en-

hanced or clarified the regulations, they were incorporated in the final rules.

Additionally, a number of comments were received that were beyond the scope of the July 8, 1977, proposed regulations. Since the Department continually reviews its regulations for potential improvement, these comments will be considered in future efforts. In response to several requests, an updated and complete set of Part 94, 95, 96, and 98 regulations is being prepared for publication in the near future.

Pursuant to the provisions of section 305(a) of the Youth Employment and Demonstration Projects Act of 1977, §§ 95.13, 95.32 and 96.29 of the regulations have been revised to provide increased service to two groups of veterans: disabled veterans and Vietnam-era veterans under 35 years of age. The regulations reflect the statutory requirement for prime sponsors to set local goals for service to these two groups; to provide for the increased participation of these two groups in employment and training opportunities; and to invite representatives of veterans organizations to serve as temporary members on planning councils.

Pursuant to the provision of section 346(a)(2) of CETA, as added by Pub. L. 95-93, a requirement has been added in §§ 95.13 and 95.14 that prime sponsors may not decrease their title I level of youth services because of funds available under title III, Part C, subpart 3 of CETA.

Minor changes to §§ 94.4 and 96.29 required by the passage of the Youth Employment and Demonstration Projects Act of 1977, have also been made in this revision.

Finally, numerous commenters requested that substantive provisions contained in the *Forms Preparation Handbook* be codified in the regulations. Therefore, §§ 94.4, 95.14, 95.52, and 98.17 have been revised to indicate the status of foster children, provide a definition of family income, explain the requirements of the grant narrative pertaining to planning councils, and indicate the Annual Plan settlement procedures.

Accordingly, Parts 94, 95, 96, and 98 of Title 29 of the Code of Federal Regulations are amended as follows:

## PART 94—GENERAL PROVISIONS FOR PROGRAMS UNDER THE COMPREHENSIVE EMPLOYMENT AND TRAINING ACT

1. Section 94.1 is revised to read as follows:

## § 94.1 Scope and purpose of the Act.

(a) It is the purpose of the Act to provide job training and employment opportunities for economically disadvantaged, unemployed and underemployed persons, and to assure that training and other services lead to maximum employment opportunities and enhance self-sufficiency. The purpose of the Act is to be accomplished by the establishment of a flexible and decentralized system of Federal, State and local programs.

(b) The Act is comprised of eight titles, as follows:

(1) Title I establishes a program to provide comprehensive manpower services throughout the Nation, including the development and creation of job opportunities, and the training, education and other services needed to enable individuals to secure and retain employment at their maximum capacity.

(2) Title II authorizes public service employment and manpower training programs for unemployed and underemployed persons in areas of substantial unemployment.

(3) Title III provides for the establishment and administration by the Secretary of Labor of:

(i) Special programs for Indians, seasonal farmworkers both migratory and non-migratory;

(ii) Manpower services for youth, offenders, older workers, persons of limited English-speaking ability and other special target groups; and

(iii) Research, training and evaluation of programs and activities conducted under the Act.

(4) Title IV establishes a Job Corps within the Department of Labor to provide residential and non-residential manpower services for low-income disadvantaged young men and women.

(5) Title V, establishes a National Commission for Manpower Policy. The responsibilities of the Commission include the examination of national manpower issues, the suggestions of ways and means of dealing with such issues and advising the Secretary on national manpower issues.

(6) Title VI, authorizes additional public service jobs and training programs for unemployed and underemployed persons and provides special provisions for programs in areas of excessively high unemployment.

(7) Title VII sets forth the general provisions, including applicable definitions, under the Act.

(8) Title VIII establishes a Young Adult Conservation Corps, administered by the Department of Labor through interagency agreements with the Department of Agriculture and Interior.

2. Section 94.2 is revised to read as follows:

## § 94.2 Format for the regulations promulgated under the Act.

(a) The regulations promulgated to carry out the Act are set forth in Parts 94 through 99 of Title 29, Code of Federal Regulations.

(b) As each substantive Title of the Act provides for the establishment of a specific type of program, the regulations promulgated in Parts 94 through 99 provide for a separate part for each basic type of activity (e.g., Part 95 deals with comprehensive manpower programs; Part 96 deals with Title II programs). Two parts are also included which deal with general matters relating to the Act: Part 94 deals with basic explanatory and definitional matters, and Part 98 deals with general administrative matters.

(c) Statutory authority for the regulations contained in Parts 94 through 99

may be found in Section 702(a) of the Act, as well as in other substantive provisions of the Act. Applicable statutory provisions, other than section 702(a), are noted generally in these regulations.

3. Section 94.3 is amended by revising the tables of contents for Parts 95, 96, and 98 to conform to the tables of contents for each of those Parts as follows:

## § 94.3 Consolidated table of contents for Parts 94-99.

The table of contents for Parts 94-99 is as follows:

## PART 95—PROGRAMS UNDER TITLE I OF THE COMPREHENSIVE EMPLOYMENT AND TRAINING ACT

## SUBPART A—GENERAL

95.1 Scope and purpose of Part 95  
95.2 Allocation of funds.  
95.3 Eligibility for funds.  
95.4 Data base for determining eligibility

## SUBPART B—GRANT PLANNING, APPLICATION AND MODIFICATION PROCEDURES

95.10 General.  
95.11 Preapplication for Federal Assistance, consortium agreements.  
95.12 Prime sponsor designation.  
95.13 Planning process; advisory councils.  
95.14 Content and description of grant application.  
95.15 Comment and publication procedures relating to submission of grant application.  
95.16 Submission of grant application  
95.17 Standards for reviewing grant applications.  
95.18 Application approval.  
95.19 Application disapproval  
95.20 Use of alternative prime sponsors, services by the Secretary.  
95.21 Modifications.

## SUBPART C—PROGRAM OPERATION

95.30 General.  
95.31 Basic responsibilities of prime sponsors.  
95.32 Eligibility for participation in a Title I Program.  
95.33 Types of manpower program activities available.  
95.34 Training allowances.  
95.35 Wages.  
95.36 Minimum duration of training and reasonable expectation of employment.  
95.37 Training for lower wage industries; relocation of industries.  
95.38 Cooperative relationships between prime sponsor and other manpower agencies.  
95.39 Federal Supplemental Benefit Claimants; beneficiaries under Title II of the Trade Act.

## SUBPART D—SPECIAL GRANTS TO GOVERNORS

95.50 General.  
95.51 Distribution of funds.  
95.52 Grant application.  
95.53 Application approval and disapproval.  
95.54 Modifications.  
95.55 Governor's distribution of vocational education funds.  
95.56 Program operations.  
95.57 Funding; grant administration.  
95.58 Nonfinancial agreement between prime sponsor and State Vocational Education Board.  
95.59 Coordination with prime sponsor.

## PART 96—PROGRAMS UNDER TITLE II OF THE COMPREHENSIVE EMPLOYMENT AND TRAINING ACT.

96.1 General.  
96.2 Payment.  
96.3 Letter of credit.

## SUBPART A—GENERAL

96.1 Scope and purpose.  
96.2 Allocation of funds.  
96.3 Eligibility for funds.

## SUBPART B—GRANT APPLICATION

96.10 General.  
96.11 "Preapplication for Federal Assistance"; consortium agreements.  
96.12 Eligible applicant designation.  
96.13 Planning process; advisory councils.  
96.14 Content and description of grant application.  
96.15 Comment and publication procedures relating to submission of grant application.  
96.16 Submission of grant application; standards for reviewing grant applications.  
96.17 Application approval; application disapproval; grant agreement.  
96.18 Use of alternative eligible applicants; services by the Secretary.  
96.19 Modifications.

## SUBPART C—PROGRAM OPERATION

96.20 General.  
96.21 Basic responsibilities of eligible applicants.  
96.22 Basic responsibilities of program agents; relationship with eligible applicants.  
96.23 Acceptable public employment positions.  
96.24 Maintenance of effort.  
96.25 Responsibility for selecting participants.  
96.26 Place of residence for participants.  
96.27 Eligibility for participation in a Title II Program.  
96.28 Equitable service to the unemployed population; serving significant segments.  
96.29 Groups to be provided special consideration within the significant segment groups served.  
96.30 Serving the most severely disadvantaged persons.  
96.31 Training and supportive services.  
96.32 Linkages with other manpower programs.  
96.33 Placement goals.  
96.34 Compensation for participants.  
96.35 Administrative staff.  
96.36 Use of Title II funds for programs under Titles I and III—A.

## SUBPART D—SPECIAL CONDITIONS FOR GRANTS TO INDIAN TRIBES ON FEDERAL AND STATE RESERVATIONS

Sec.  
96.40 General.  
96.41 Distribution of funds.  
96.42 Eligibility for funds.  
96.43 Funding of eligible applicants.  
96.44 Planning process; advisory councils.  
96.45 Comment and publication procedures relating to submission of Indian grant applications.  
96.46 Assistance by the Director, Division of Indian and Native American Programs.  
96.47 Participant eligibility.  
96.48 Nepotism.  
96.49 Nondiscrimination.  
96.50 Subgrants.  
96.51 Travel requirements.

## PART 98—ADMINISTRATIVE PROVISIONS FOR PROGRAMS UNDER THE COMPREHENSIVE EMPLOYMENT AND TRAINING ACT.

## SUBPART A—GRANT ADMINISTRATION

98.1 General.  
98.2 Payment.  
98.3 Letter of credit.

- 98.4 Payment by Treasury check.
- 98.5 Financial management systems.
- 98.6 Audit.
- 98.7 Reporting requirements in general.
- 98.8 Program Status Summary, Financial Status Report and Monthly Progress Report.
- 98.9 Quarterly Summary of Participant Characteristics.
- 98.10 Report of Federal Cash Transactions.
- 98.11 Reallocation of funds.
- 98.12 Allowable Federal costs.
- 98.13 Allocation of allowable costs among program activities.
- 98.14 Basic personnel standards for grantees.
- 98.15 Adjustments in payments.
- 98.16 Termination of grant; suspension of grant in emergency situations.
- 98.17 Annual Plan settlement procedures.
- 98.18 Maintenance and retention of records.
- 98.19 Program income.
- 98.20 Procurement and property management standards.
- 98.21 Nondiscrimination and equal employment opportunities.
- 98.22 Nepotism.
- 98.23 Special limitations on participant activities.
- 98.24 General benefits and working conditions for program participants.
- 98.25 Retirement programs.
- 98.26 Procedures for resolving issues between grantees and complainants.
- 98.27 Grantee contracts and subgrants.
- 98.28 Non-Federal status of participants.
- 98.29 Applicability of Davis-Bacon wage rates to projects under the Act.
- 98.29a Job Corps training opportunities for CETA grantees.

## SUBPART B—ASSESSMENT AND EVALUATION

- 98.30 General.
- 98.31 Responsibilities of the prime sponsor or eligible applicant.
- 98.32 Responsibilities of the Secretary.
- 98.33 Limitation.
- 98.34 Consultation with the Secretary of Health, Education, and Welfare.

## SUBPART C—HEARINGS AND JUDICIAL REVIEW

- 98.40 Purpose and policy.
- 98.41 Review of plans and applications; violations.
- 98.42 Complaints; filing of formal allegations; dismissal.
- 98.43 Forms.
- 98.44 Contents of formal allegation; amendment.
- 98.45 Investigations.
- 98.46 Opportunity for hearings; when required.
- 98.47 Hearings.
- 98.48 Initial certification, decisions and notices.
- 98.49 Judicial review.

4. Section 94.4 is amended by revising paragraphs (s), (v), (kk), (fff), (ggg), (hhh), and by adding paragraphs (vvv), (www), (xxx), and (yyy) as follows:

## § 94.4 Definitions.

(s) "Economically disadvantaged" shall mean a person who:

- (1) is a member of a family which receives cash welfare payments under Federal, State or local welfare programs;
- (2) is a member of a family which has a total family income, as defined in paragraph (xxx) of this section, which in relation to family size, does not exceed the poverty level determined in accordance with criteria established by the Office of Management and Budget or

70% of the lower living standard income level, whichever is higher. Family income shall be computed by:

- (i) Annualizing all family income received during the 3 months preceding the assignment of the economically disadvantaged classification, or
- (ii) If, due to seasonal unemployment (e.g., teachers), seasonal employment, summer employment for youth, or other circumstances, the 3 month period is unrepresentative, totaling family income received during the 12 months preceding the assignment of the economically disadvantaged classification; or
- (3) is a foster child on behalf of whom State or local government payments are made.

(v) "Family" shall mean one or more persons living in a single household who are related to each other by blood, marriage or adoption. A stepchild who receives at least 50% of his/her support from the stepparent shall be counted as a member of the stepparent's family. A member of a household:

- (1) Who is 18 or older;
- (2) Who receives less than 50% of his/her maintenance from the family; and
- (3) Who is not the head of the household or the spouse of the head of the household, shall not be considered a member of the family. Such an individual shall be considered a family residing alone or in group quarters.

(kk) "Participant" shall mean an individual who is eligible for and takes part in activities under provisions of the Act or receives services funded under the Act, except for an individual who receives only outreach and intake services. An individual applicant becomes a participant when:

- (1) The individual is declared eligible upon intake; and
- (2) The individual receives employment, training or services funded under the Act following intake, except for an individual who receives only outreach and/or intake services.

(fff) "Underemployed person" shall mean:

- (1) A person who is working part-time but has been seeking full-time work, and who is a member of a family whose total family income (as defined in paragraph (xxx) of this section) in relation to his or her family size, does not exceed the poverty level determined in accordance with criteria established by OMB, or

(2) A person who is working full-time and who is a member of a family whose total family income (as defined in paragraph (xxx) of this section) in relation to his or her family size, does not exceed the poverty level determined in accordance with criteria established by OMB.

- (3) Family income shall be computed by:

- (i) Annualizing family income received during the 3 months preceding the

assignment of the underemployed classification, or

- (ii) If, due to seasonal unemployment, seasonal employment, summer employment for youth or other circumstances, the 3 month period is unrepresentative, totaling family income received during the 12 months preceding the assignment of the underemployed classification.

(ggg) "Unemployed person" shall mean for Title I activities except in the case of welfare recipients:

- (1) A person who is without a job and who wants and is available for work, defined as follows:

(i) A person who is without a job is a person who did not work during the calendar week preceding the week in which the determination of his eligibility for participation is made. Except in the case of persons described in paragraph (ggg) (2) of this section, the determination of who wants and is available for work will be made by the prime sponsor or his designee. Persons who have been discouraged from seeking work but are currently available for work, shall not be excluded from eligibility.

(ii) If a person is confined in a jail, penitentiary, or other institution and there is a reasonable expectation that release will follow the completion of training within a reasonable time, the individual shall be considered unemployed.

(2) In the case of welfare recipients, and except for purposes of sections 103 and 202 of the Act, the term "unemployed person" shall mean an adult who, or whose family, receives supplemental security income or money payments pursuant to a State plan approved under the Social Security Act, Title IV (Aid to Families with Dependent Children), or under the Social Security Act, Title XVI (Supplemental Security Income for the Aged, Blind and Disabled), or would be eligible for such payments according to the standards set forth at 45 CFR Part 233 and 20 CFR Part 416 if both parents were not present in the home, and

- (1) Who is available for work, and
- (ii) Who is either without a job or working in a job providing insufficient income to enable such a person and his family to be self-supporting without welfare.

(3) A veteran who has served on active duty for a period of more than 180 days or who was discharged or released from active duty for a service connected disability, shall be immediately eligible, upon release or discharge, for participation in a program under Title I of the Act without regard to the previous calendar week unemployment requirement which would otherwise pertain (38 U.S.C. 2013): *Provided*, The veteran has not obtained permanent, full-time, unsubsidized employment between the time of release and the time of application for participation in Title I.

(hhh) "Unemployed person" shall mean for Title II activities:

- (1) A person who is without a job and who wants and is available for work. Except in the case of persons described in

(2) below, the determination of who wants and is available for work will be made by the prime sponsor or his designee. Persons who have been discouraged from seeking work but are currently available for work, shall not be excluded from eligibility.

(2) Except for the purposes of sections 103 and 202 of the Act, an adult who, or whose family, receives supplemental security income or money payments pursuant to a State plan approved under the Social Security Act, Title IV (Aid to Families with Dependent Children), or under the Social Security Act, Title XVI (Supplemental Security Income for the Aged, Blind and Disabled) or would be eligible for such payments according to the standards set forth at 45 CFR Part 233 and 20 CFR Part 416 if both parents were not present in the home, and

- (i) Is available for work, and
- (ii) Who is either without a job or working on a job providing insufficient income to enable such a person and his family to be self-supporting without welfare assistance.

(3) A person is "without a job" if, during the 30 days preceding his application, he has worked no more than a total of 10 hours or has earned no more than \$30 in any calendar week during the 30 days.

(vvv) "Hawaiian Native" shall mean any individual, any of whose ancestors were natives of the areas which consisted of the Hawaiian Islands prior to 1778 (Sec. 701(a)(16)).

(www) "Vietnam-era veteran" shall mean a person who:

- (1) Served on active duty in the Armed Forces for a period of more than 180 days, any part of which occurred between August 5, 1964, and May 7, 1975, inclusive, and was discharged or released with other than a dishonorable discharge; or
- (2) Was discharged or released from active duty in the Armed Forces for a service-connected disability if any part of such active duty was performed between August 5, 1964, and May 7, 1975, inclusive.

(xxx) "Family income" shall mean the sum of all income received from all sources determined as follows:

- (1) Family income shall include—(i) Gross wages or salary. The total money earnings received for work performed as an employee; it represents the amount paid before deductions for income taxes, social security, bond purchases, union dues, etc. (Wages and salaries received by individuals through public service employment and on-the-job training shall be included in income computations);
- (ii) Self-employment income. Net money income (gross receipts minus operating expenses) from a business firm, farm, or other enterprise in which a person is engaged on his/her own account; and
- (iii) Other income. Money income received from such sources as net rents, social security benefits (OASI and dis-

ability insurance), pensions, alimony, payments for child support and periodic income from insurance policy annuities.

(2) Family income shall exclude: (1) General

- (A) Non-cash income, such as food stamps and wages received in the form of food or housing.

(B) Imputed value of owner-occupied property, i.e., rental value.

(C) Cash welfare payments.

(D) Payments made to participants in employment and training programs, such as payments for training, work experience, transportation, and dependency allowances except for those payments specified in paragraph (xxx)(1)(i) of this section.

(E) Capital gains and losses.

(F) One-time unearned income, such as the following (Not intended to be an all-inclusive list, but designed to illustrate the conceptual framework of one-time unearned income):

- (1) Payments received for a limited fixed term under income maintenance programs and supplemental unemployment benefit plans.
- (2) One-time (or fixed term) scholarship and fellowship grants.

(3) Accident, health, and casualty insurance proceeds.

(4) Disability and death payments, including fixed term (but not lifetime) life insurance annuities and death benefits.

(5) One-time awards and gifts.

(6) Inheritances, including fixed term annuities.

(7) Fixed term workers' compensation awards.

(8) Terminal leave pay.

(9) Soil bank payments.

(10) Agriculture crop stabilization payments.

(ii) Veterans. (A) Amounts received as pay or allowances by any person while serving on active duty in the Armed Services.

(B) Educational assistance and compensation payments to veterans and other eligible persons under Chapters 11, 13, 31, 34, 35, and 36 of Title 38, United States Code.

(yyy) "Comprehensive manpower plan (CMP)" shall mean the Prime Sponsor Agreement and the Annual Plans executed pursuant to the Prime Sponsor Agreement.

## PART 95—PROGRAMS UNDER TITLE I OF THE COMPREHENSIVE EMPLOYMENT AND TRAINING ACT

5. The table of contents for Part 95 is revised to read as follows:

Subpart A—General	
Sec.	
95.1	Scope and purpose of Part 95.
95.2	Allocation of funds.
95.3	Eligibility for funds.
95.4	Data base for determining eligibility.
Subpart B—Grant Planning, Application and Modification Procedures	
95.10	General.
95.11	Preapplication for Federal Assistance, consortium agreements.
95.12	Prime sponsor designation.
95.13	Planning process; advisory councils.
95.14	Content and description of grant application.

95.15 Comment and publication procedures relating to submission of grant application.

95.16 Submission of grant application.

95.17 Standards for reviewing grant applications.

95.18 Application approval.

95.19 Application disapproval.

95.20 Use of alternative prime sponsors; services by the Secretary.

95.21 Modifications.

Subpart C—Program Operation

95.30 General.

95.31 Basic responsibilities of prime sponsors.

95.32 Eligibility for participation in a Title I Program.

95.33 Types of manpower program activities available.

95.34 Training allowances.

95.35 Wages.

95.36 Minimum duration of training and reasonable expectation of employment.

95.37 Training for lower wage industries; relocation of industries.

95.38 Cooperative relationships between prime sponsor and other manpower agencies.

95.39 Federal Supplemental Benefit Claimants; beneficiaries under Title II of the Trade Act.

Subpart D—Special Grants to Governors

95.50 General.

95.51 Distribution of funds.

95.52 Grant application.

95.53 Application approval and disapproval.

95.54 Modifications.

95.55 Governor's distribution of vocational education funds.

95.56 Program operations.

95.57 Funding; grant administration.

95.58 Nonfinancial agreement between prime sponsor and State Vocational Education Board.

95.59 Coordination with sponsor.

AUTHORITY: Comprehensive Employment and Training Act of 1973, as amended (Pub. L. 93-203, 87 Stat. 839; Pub. L. 93-567, 88 Stat. 1845), Sec. 702(a) unless otherwise noted.

6. Section 95.3 is amended by revising paragraph (a)(4) to read as follows:

§ 95.3 Eligibility for funds.

(a) . . .

(4) (i) Any unit of general local government, or any combination of such units, without regard to population, which, in exceptional circumstances, is determined by the Secretary, after giving serious consideration to comments from the prime sponsor otherwise responsible for the area and the Governor, to serve a substantial portion (e.g., 75 percent) of a functioning labor market area or to be a rural area with a high level of unemployment and to have demonstrated that (A) it has the capability for effectively carrying out a comprehensive manpower program under the Act, evidenced by its effective operation of programs such as CEP or other multicomponent programs, (B) there is a special need for services provided by the Act (e.g., the area has a high proportion of such groups within the population as older workers, high school dropouts, or has a high unemployment rate, substantial outmigration or unique commuting problems, and (C) it will afford administrative and programmatic advantages over other methods of delivering services under the Act;

I

(ii) The following units of general local government or combination of such units shall automatically be considered as exceptional circumstance prime sponsors since such unit(s) have been determined by the Secretary to meet the requirements of paragraph (a) (4) (i) of this section:

(A) A unit of general local government which was a prime sponsor in the previous fiscal year, had a population of 100,000 or more persons according to the previous year's census update estimate, and has since fallen below 100,000 (but not below 90,000) in population; and

(B) A combination of units of general local government which meet the requirements of paragraph (a) (3) (i) (A), (B), and (D) of this section, which were members of the same consortium in the previous fiscal year, and which contain at least one unit which had a population of 100,000 or more persons according to the previous year's census update estimate, but has since decreased below 100,000 (but not below 90,000) in population; and

7. Section 95.13 is amended by adding paragraph (b) (3) and by revising paragraph (c) (3). Also paragraph (d) is amended by revising paragraphs (d) (2) (ii) and (iii), by revising paragraphs (d) (4), (d) (4) (i), and (d) (4) (v), by adding paragraphs (d) (4) (vi) and (d) (4) (vii), and by adding paragraphs (d) (5) and (d) (6). Accordingly section 95.13 is amended to read as follows:

§ 95.13 Planning process; advisory councils.

(b) . . . .  
(3) In developing the Title I Annual Plan, the prime sponsor shall not reduce services to youth because of the availability of financial assistance under Subpart 3, Part C of Title III (sec. 346(2)).

(c) . . . .  
(3) Each prime sponsor shall, to the extent practical, include as appointments to its Planning Council members who are representative of the participant community (e.g., women, persons of limited English-speaking ability, and other minority groups) and of community-based organizations, the SESA, education and training agencies and institutions, business (e.g., representatives of a locally based business firm, the National Alliance of Businessmen, or Chamber of Commerce) organized labor, and where appropriate, agriculture. Additionally, each prime sponsor shall invite representatives of appropriate veterans' organizations or groups to serve as temporary members of its Planning Council. (Sec. 305(a) of Pub. L. 95-93.) Generally, staff of State or local government agencies should not take the place of representatives of the participant communities which their agencies serve. Persons representative of other interested groups may also be appointed. The prime sponsor shall appoint a chairperson of the Planning Council and provide professional, clerical and technical staff to serve it. Funds for supportive services and related staff costs for the Planning

Council may be made available from a prime sponsor's basic allocation.

(d) . . . .  
(2) . . . .  
(ii) One representative shall be appointed from each of the following: The State Board of Vocational Education, the State Advisory Council on Vocational Education, the State employment service, and any State agency the Governor believes has an interest in manpower or manpower-related services within the State (Sec. 203 of the Vocational Education Act of 1973, as amended (Pub. L. 94-482)).

(iii) Representatives shall be appointed from organized labor, business and industry, the general public, community-based organizations, and from the population to be served under the Act (including representation of women, persons of limited English-speaking ability, and other minority groups when such persons represent a significant portion of the participant population). Additionally, representatives of appropriate veterans' organizations or groups shall be invited to serve as temporary members. Generally, staff of State or local government agencies should not take the place of representatives of the participant communities which their agencies serve. (sec. 305(a) of Pub. L. 95-93).

(4) Council responsibilities shall include, but not be limited to:

(i) Reviewing prime sponsor grant applications, proposed modifications, and comments thereon, particularly for utilization of and coordination with State agencies and for coordination of plans and operations in contiguous areas.

(v) Submitting an Annual Report to the Governor which shall be a public document, and issuing such other studies, reports or documents to the Governor and prime sponsors as the SMSC believes necessary to effectively carry out the Act. The Annual Report shall include an analysis of the coordination achieved during the previous year, efforts taken to effect such coordination, and recommendations on potential actions that would further facilitate effective coordination. This report shall be submitted no later than 120 days after the end of the Federal fiscal year. A copy of this report shall also be submitted to the State Advisory Council on Vocational Education. Comments received from the State Advisory Council on Vocational Education shall be incorporated into the Annual Report to the Governor (Sec. 203 of the Vocational Education Act of 1973, as amended (Pub. L. 94-482)).

(vi) Consulting with the State Advisory Council on Vocational Education in order to identify the employment and training vocational education needs within the State and to assess the extent to which employment training, vocational education, vocational rehabilitation and other programs assisted under this and related Acts represent a con-

sistent, integrated and coordinated approach to meeting such needs (sec. 203 of the Vocational Education Act of 1973, as amended (Pub. L. 94-482)); and

(vii) Commenting at least once annually on the reports of the State Advisory Council on Vocational Education and incorporating those comments in the Annual Report to the Governor (Sec. 203 of the Vocational Education Act of 1973, as amended (Pub. L. 94-482)).

(5) The Governor shall appoint a representative of the Council to represent the SMSC on the State Advisory Council on Vocational Education.

(6) The Governor shall appoint a representative of the Council to represent the Council on the State Occupational Information Coordinating Committee.

8. Section 95.14 is amended by revising paragraphs (a) and (c). Also paragraph (b) is amended by revising paragraphs (b) (1) and (2), by revising (b) (3) (ii) (E) and by adding (b) (3) (ii) (G), by adding (b) (3) (iii) (M) and (b) (3) (iii) (N), and by adding (b) (3) (v) and (b) (3) (vi). Accordingly, section 95.14 is amended to read as follows:

§ 95.14 Content and description of grant application.

(a) General. This section describes the grant application which designated prime sponsors shall use to apply for funds under title I. The application shall consist of two documents, the Prime Sponsor Agreement (PSA) and the Annual Plan (AP). Detailed instructions for completing the application, which is described in summary form below, are contained in the Forms Preparation Handbook.

(b) Prime Sponsor Agreement. A designated prime sponsor applying for assistance for the first time shall submit to the RA a signed copy of the PSA. A designated prime sponsor which has already entered into a PSA in a previous year shall submit to the RA with its Annual Plan, a certification that the PSA remains the same or that it is revised as described in attachments to the certification. The initial submission and subsequent certification of the PSA are subject to the comment and publication procedures of § 95.15. The PSA shall consist of the Signatory Page, the Narrative Description of General Information, Assurances and Certifications, and, for consortia, the approved consortium agreement.

(1) Signatory page. The Signatory Page, when signed by the designated prime sponsor and the authorized representative of the RA, shall constitute a legal and binding document by which the designated prime sponsor agrees that all work performed under its Annual Plan will be in accordance with the Act, the Assurances and Certifications and the regulations of 29 CFR Parts 94, 95, 96 and 98.

(2) Narrative description of general information. The Narrative Description of General Information shall include a detailed statement on the following items:

(i) Program purpose.

(ii) Geographic description and economic conditions of area to be served. A brief description of the geographic area to be served and the economic conditions of the area.

(iii) Approach. (A) A description of the recruitment and selection methods to be used.

(B) A description of the efforts to be undertaken to increase the participation of qualified disabled veterans and qualified Vietnam-era veterans who are under 35 years of age.

(C) A description of the placement and follow-up mechanisms and procedures to be used.

(D) Public service employment program. (1) A description of actions to insure compliance with personnel procedures and collective bargaining agreements for jobs in other than the entry level.

(2) A description of the training for supervisory personnel.

(3) A description of efforts to remove artificial barriers.

(4) A description of the specific steps to be undertaken to provide consideration to special veterans, those veterans who have received other than a dishonorable discharge within four years prior to application, and welfare recipients.

(5) A description of the emphasis which will be placed on the development of jobs for veterans which will utilize skills acquired through their military experience.

(iv) Delivery agents. (A) An explanation of the methods and criteria to be used in the selection of deliverers of service.

(B) A description of priority given to area skill centers.

(C) A description of efforts to utilize apprenticeship or other on-the-job training opportunities available under Section 1787 of Title 38, United States Code.

(v) Prime sponsor planning. (A) A description of the role and procedures of the planning council in submitting recommendations, monitoring, and analyses, as well as information on the location, frequency, and publicizing of meetings, and whether minutes are kept and meetings are open to the public.

(B) A description of the staff support of the council.

(C) A list of the sectors represented on the council.

(D) A description of the participation of community-based organizations and groups in the program plan.

(vi) Management and administrative plan.—(A) Organizational structure. A description of the prime sponsor's organizational structure.

(B) Administrative controls. A description of the internal administrative controls including:

(1) Monitoring system;

(2) Evaluation system;

(3) Personnel or merit system (including the prime sponsor's plan for obtaining an acceptable personnel system as required in § 98.14(b));

(4) Accounting system;

(5) Fiscal reporting and participant tracking system(s);

(C) Allowance payments system. A description of the details of the allowance payments system, including waiver provisions.

(D) Grievance procedures. A description of the procedures for resolving any complaints, alleging violation of the Act, regulations, PSA, or Annual Plan, of CETA participants, contractors, subgrantees and other parties.

(E) Equal employment opportunity. A description of the mechanisms which will be used to assure nondiscrimination and equal employment opportunities.

3. . . . .  
(ii) . . . .

(E) Appropriate steps taken to provide for the increased participation of qualified disabled veterans and qualified Vietnam-era veterans who are under 35 years of age.

(G) Non-reduction in the numbers of youth to be served from the previous year in anticipation of the availability of funds under Subpart 3, Part C of Title III and prohibition against decreasing the extent of services offered to these youth, (e.g., replacing classroom training with only counseling. (Sec. 346(a) (2)).

(iii) . . . .  
(M) Appropriate steps taken to provide for the increased participation of qualified disabled veterans and qualified Vietnam-era veterans who are under 35 years of age.

(N) Selection of other than necessary technical supervisory and administrative personnel from the unemployed and underemployed population. (sec. 205(c) (2)).

(v) Additional assurance for Title II programs:

(A) Hiring of residents of areas of substantial unemployment for all jobs created under Title II and providing services to benefit residents of such areas.

(vi) Additional assurance for Title VI programs:

(A) Only persons residing in the area served by the eligible applicant under title VI of the Act will be hired to fill jobs created under the Act and that the public services provided by such jobs shall, to the extent feasible, be designed to benefit the residents of such areas except that funds allocated under title VI of the Act (section 603(a) (2) (B)), to an area eligible for assistance under title II of the Act shall only be used to provide project and program opportunities to persons residing in those areas of substantial unemployment as defined in section 204(c). (Sec. 603(a) (2)).

(c) On a date set by the Secretary, an Annual Plan for Title I must be submitted by designated prime sponsors in order to obtain funds under Title I. The Annual Plan is subject to the comment and publication procedures of § 95.15. The Annual Plan shall consist of the following:

(1) Application for Federal assistance. The Application for Federal Assistance shall identify the designated prime sponsor and the amount of funds requested and provide information concerning the area to be served and the number of people expected to benefit from the program. Standard Form 424 contained in FMC 74-7 shall be used.

(2) Annual narrative description of program. The Annual Narrative Description of Program shall contain a detailed statement of the following items:

(i) Objectives and needs for assistance. (A) (1) A description of the significant segments which are most in need of service, including a description of the local goals developed for qualified disabled veterans and qualified Vietnam-era veterans who are under 35 years of age; and

(2) A breakout of the demographic groups (in terms of age, race, and sex) of the unemployed population, a breakout of the plan of service to each of the demographic groups, and justification for a plan of service to any of the demographic groups which is more than 15 percent below the group's incidence in the unemployed population. Variances in excess of 15 percent which occur because of the prime's concentration on serving its economically disadvantaged and/or underemployed population will be considered adequate justification.

(B) An assessment of job opportunities in the area.

(ii) Results and benefits expected. (A) A statement of the specific participant goals the prime sponsor intends to accomplish.

(B) A statement of other goals.

(iii) Approach.—(A) Program activities and services. (1) A description of the activities and services to be provided.

(2) A description of the participant flow and the relationship among the activities to be provided.

(3) A description of programs, if any, designed for persons of limited English-speaking ability.

(4) For those applicants intending to request funds under section 303 of the Act, a discussion of how migrants and seasonal farmworkers will be served.

(B) Delivery agents. (1) A list of deliverers and the services to be provided by each.

(2) A description of the linkages established.

(3) A list of the manpower-related services and facilities which are available from Federal, State, and local agencies and an indication of which have been determined to have demonstrated effectiveness in providing manpower services.

(4) An explanation for non-use or duplication of existing services and facilities including programs of demonstrated effectiveness listed in § 95.14(c) (2) (iii) (B).

(C) Discussion of program planning summary (PPS) and budget information summary (BIS). (1) An explanation of how the PPS reflects the goals, objectives, and activity description provided above.

(2) An explanation of how costs were determined by the BIS.

(D) *Property.* A list of any items of capital equipment which individually cost more than \$1,000 including quantity and prices.

(iv) *Public service employment program.* (A) For those Title II applicants whose geographic area differs from the Title I areas described in the PSA, a description of the Title II area.

(B) *Analysis of public service needs.* A description of the unmet public service needs.

(C) *Approach.* A description by employing agency of the types of jobs to be funded including: (1) An explanation of how these jobs relate to the public service needs identified in paragraph (c) (2) (iv) (B) of this section.

(2) A description of determination of rates of compensation when they differ from what is normally paid by the employer.

(3) A description of the education, training, and supportive services to participants.

(4) A maintenance of effort verification.

(5) A description of plans to improve and expand employment and advancement opportunities of the target population.

(6) An explanation of how the public service employment program is integrated with other activities and services.

(7) A narrative explanation for basis of funding and job allocation to each local government and agency.

(3) *Program planning summary.* The Program Planning Summary requires a prime sponsor to provide a quantitative statement of planned enrollment levels, the participants to be served by each program activity (classroom training, on-the-job training, public service employment, work experience, and other activities) and planned outcomes for program participants. It shall also include an identification of the significant segments of the population and the number of individuals in each to be served.

(4) *Budget information summary.* The Budget Information Summary shall include a quantitative statement of yearly planned expenditures by cost category (administration, allowances, wages, fringe benefits, training, and services), planned quarterly obligations, and planned quarterly expenditures by program activity.

(5) *Public service employment occupational summary.* The Public Service Employment Occupational Summary shall include a description of proposed public service job opportunities, occupations and wages, including a comparison of such wages for similar unsubsidized jobs in each employing agency. If, at the time of submission of the Annual Plan, final decisions have not yet been made on all jobs to be filled, the Occupational Summary need not be submitted with the Annual Plan. Instead, it shall be submitted to the RA as soon as all jobs are selected but not later than 60 days after the date the Annual Plan is executed.

9. Section 95.16 is revised to read as follows:

**§ 95.16 Submission of grant application.**

(a) Except as indicated in paragraph (b) of this section, each designated prime sponsor shall simultaneously submit to the RA on or before a date set by the Secretary:

(1) An Annual Plan for Title I.

(2) A certification that the PSA remains the same or is revised in certain respects, which are described in attachments, and

(3) An Approval Request Letter.

(b) Newly designated prime sponsors shall submit the PSA no later than 30 days prior to the submission of the Annual Plan, on or before a date set by the Secretary. An Approval Request Letter shall accompany the submission. A signed copy of the signatory page will be provided to the designated prime sponsor by the RA indicating approval of the PSA before submittal by the designated prime sponsor of its Annual Plan.

10. Section 95.18 is amended by revising the title and by revising paragraphs (a), (d), and (e) to read as follows:

**§ 95.18 Application approval.**

(a) An application for a grant shall be approved if it meets the requirements of the Act, the regulations promulgated under the Act and other applicable law, and if the RA determines that the prime sponsor has demonstrated maximum efforts to meet the goals of the prior year's annual plan.

(d) In addition to notifying the designated prime sponsor as provided in paragraph (c) (1) of this section, if an Annual Plan is approved, the RA shall provide the prime sponsor with a letter indicating approval.

(e) Funding authority will be issued by a Notice of Fund Availability.

11. Section 95.21 is revised to read as follows:

**§ 95.21 Modifications.**

(a) *Modifications of the prime sponsor agreement.* (1) The Signatory Page and the Assurances and Certifications shall only be modified at the initiation of the RA, after consultation with the prime sponsor, to insure compliance with the regulations.

(2) *The narrative description of general information of the PSA.* The Narrative Description shall be modified as follows:

(i) *RA initiated modifications.* RAs may require modification to insure compliance with the regulations, after consultation with the prime sponsor.

(ii) *Prime sponsor initiated modifications.* (A) When significant changes are planned in the systems and procedures, such as a change in the allowance payment system, prior regional office approval is necessary.

(B) The prime sponsor may make any changes other than those described in (a) (1), (a) (2) (i), and (ii) (A) of this

section without prior regional office approval, but must notify the RA of these changes in writing by the end of the quarter in which the change occurs. Revised portions of the PSA need not be submitted with the notice.

(3) *Format.* Modifications pursuant to paragraphs (a) (1), (a) (2) (i), and (ii) (A) of this section shall consist of the following:

(i) Approval request letter;

(ii) Revised Assurances and Certifications or revised Narrative Description of General Information, as appropriate; and

(iii) A copy of the newspaper announcement required in paragraph (c) of this section.

(b) *Modifications to the annual plan.* (1) A modification to the Annual Plan requiring prior Regional Office approval is required under any of the following conditions:

(i) Change in duration of the annual plan;

(ii) Change in annual plan allotment;

(iii) Substantial change in program design and/or program goals defined as follows:

(A) When the cumulative number of individuals to be served, planned enrollment levels for program activities, planned placement terminations or individuals to be served within significant segments, is to be increased or decreased by 15 percent or more.

(B) For grants of \$100,000 or less, when the cumulative transfer of funds among program activities or cost categories exceeds \$15,000.

(C) For grants of over \$100,000, when the cumulative transfer of funds among program activities or cost categories exceeds \$50,000 or 15 percent of the total grant budget whichever is greater.

(D) When the program design is altered significantly such as when there is development or elimination of a program activity, or when 10% or more of the public service employment positions (except for Title VI) are to be used for rehiring laid-off employees.

(iv) at the initiation of the RA, after consultation with the prime sponsor, to insure compliance with the regulations and/or to insure responsiveness to changing economic conditions. A prime sponsor is responsible for assuring that its programs are responsive to the changing economic situation in its jurisdiction and for making appropriate modifications to its plan. The RA may request a reassessment and appropriate modification when the RA believes that the changing economic situation in a jurisdiction makes such a reassessment appropriate. If the prime sponsor disagrees with the RA's request for a modification pursuant to the conditions in this paragraph (iv), it may initiate a hearing pursuant to § 98.47.

(2) Annual Plan modifications will not be initiated solely to adjust planned performance to meet actual performance.

(3) *A-95 Clearance.* (i) Modifications require clearance through the A-95 clearinghouses only under the following conditions:

(A) There is a cumulative increase or decrease in funds equal to or more than 15 percent of the Annual Plan allotment for the current program year and/or;

(B) The Annual Plan is extended for a period of more than 3 calendar months and/or

(C) The RA directs that A-95 clearance is required for a particular modification.

(ii) (A) When A-95 clearance is required, the prime sponsor, whenever possible, shall provide notification to the appropriate A-95 State and areawide clearinghouses of its intent to modify its Annual Plan 60 days prior to submission of the formal modification to the RA. The notification of intent should consist of a revised form SP 424 and a brief description of the anticipated modification. If within 30 days from submission of such notification, the prime sponsor receives no notification from the A-95 clearinghouses that they wish to review the modification, the prime sponsor has fulfilled its obligation under A-95 and may submit its modification to the RA without submitting it to the A-95 clearinghouses as specified in paragraph (b) (3) (ii) (B) of this section.

(B) When a prime sponsor has not provided notification as specified in paragraph (b) (3) (ii) (A) of this section, or when it has provided this notification and the clearinghouses have requested to review the completed modification, the prime sponsor shall in all cases submit a copy of its modification to the clearinghouses for comment 30 days prior to its submission to the RA.

(C) Where no comments have been received from A-95 clearinghouses, or where the clearinghouses have not requested to review the completed modification, the prime sponsor shall so indicate in the appropriate item on the revised Standard Form 424, noting clearinghouses which sent no response after receiving the modification and clearinghouses which did not request to review the completed modification after being notified of the prime sponsor's intent to modify.

(4) A prime sponsor may make any change, consistent with the regulations in this Part and Part 98, in its Program Planning Summary, Budget Information Summary, or narrative description which is not set out in paragraph (b) (1) of this section without prior approval, but must show any such change in the First Program Status Summary and Financial Status Report, as appropriate, submitted to the Department after the change has been made. At the same time this report is submitted, an updated Program Planning Summary, Budget Information Summary, or Annual narrative description, as appropriate, shall also be submitted to the RA. Only those lines and columns or portions of the annual narrative affected by the modification need be submitted. Comments and publication requirements do not apply to changes described in this subparagraph (4).

(5) *Format.* Modifications pursuant to paragraphs (b) (1) and (3) of this section shall consist of the following:

(i) Approval Request Letter;

(ii) Revised form SF 424 (if A-95 clearance is required);

(iii) Revised Program Planning Summary and Budget Information Summary for current and future quarters only; except that a modification not involving a change in the annual plan allotment must be received in the regional office within 30 days of the beginning of the current quarter in order to include changes to the current quarter goals.

(iv) Narrative description of the changes made and certification that the publication and comment procedures in paragraph (c) of this section have been complied with.

(v) A copy of the newspaper announcement required in paragraph (c) of this section.

(vi) Revised portions of the program narrative description, if appropriate.

(vii) Revised Occupational Summary, if appropriate.

(6) *Incremental Funding.* When the Annual Plan allotment is obligated by the RA in increments, each subsequent obligation by the RA requires a new Notice of Fund Availability (NFA) to be signed by an authorized representative of the Department of Labor. This NFA does not require a revised Annual Plan, and does not require publication, comment or A-95 clearance procedures to be followed.

(c) *Publication and Comment.* (1) No later than the date of submission to the RA, a copy of any proposed modification to the PSA and the Annual Plan pursuant to paragraph (a) (1), (a) (2) (i), (a) (2) (ii) (A), and (b) (1) and (3) of this section shall be forwarded to the Governor and summaries of the modifications shall be provided to appropriate units of general local government with a population of at least 25,000, to appropriate Indian sponsors, and to labor organizations representing employees engaged in similar work in the same area as that for which participants will receive subsidized employment or training; and the prime sponsor shall publish in a minimum of one issue of a newspaper or newspapers (including minority newspaper(s), where feasible) of general circulation throughout the area to be served a notice of the prime sponsor's intent to request a modification, a brief summary of the purpose of the proposed modification, and the location and hours when the complete modification can be reviewed and the phone number where questions and comments may be directed.

(2) Comments pursuant to paragraphs (b) (3) (ii) (B) and (c) (1) of this section shall be made to the prime sponsor and the RA within 30 days of publication. All substantive written comments and responses will be transmitted to the RA with the modification, unless comments are received after the modification's submission, in which case they will be sent separately to the RA.

(3) A prime sponsor shall acknowledge any written comment made pursuant to this section. It shall inform any party submitting a substantive written comment of whether any plan revision will be made in response to the comment and the reasons for the prime sponsor's determination.

(d) *Notification of Action.* (1) RA shall take final action on approval or disapproval of any proposed modification within 30 days of receipt. Within 7 days after taking action, the RA shall notify the prime sponsor and the Governor of the action.

(2) A denial of a prime sponsor's request for a modification shall be subject to the appeal procedures set out in Part 98.

(3) The procedures in § 95.18(c) (1) and (2) shall apply to modifications under paragraph (b) (3) of this section.

12. Section 95.31 is amended by revising paragraph (c) to read as follows:

**§ 95.31 Basic responsibilities of prime sponsors.**

(c) Providing equitable service to the demographic groups (age, sex, race) within its unemployed population, taking into account the priorities identified by the Secretary, if any, the significant segments most in need of service and the incidence of underemployed and economically disadvantaged in the prime sponsor's jurisdiction. Where variances as specified in § 95.14 occur in service to the demographic groups, they shall be adequately justified in the Annual Plan.

13. Section 95.32 is amended by revising paragraphs (d) and (e) (1) to read as follows:

**§ 95.32 Eligibility for participation in a title I program.**

(d) Program participation shall be limited to citizens of the United States, natives of American Samoa and the Trust Territory of the Pacific Islands, permanent resident aliens and other aliens who have been permitted to accept permanent employment in the United States by the Immigration and Naturalization Service.

(e) (1) Prime sponsors shall take appropriate steps to provide for the increased participation of qualified disabled veterans and qualified Vietnam-era veterans who are under 35 years of age in public service employment programs and job training opportunities under Title I. Specific effort should be made to develop appropriate full or part-time opportunities for such veterans. Each prime sponsor shall develop local goals for service to such veterans taking into consideration their numbers and the number of qualified persons in other significant segments of the population in the area served. These goals shall be included in the prime sponsor's Annual Plan. The prime sponsor should utilize the assistance of the State and local veterans employment service representative in meeting these goals. In addition, prime sponsors shall, in filling public service jobs, give special consideration to special veterans; and they shall exercise maximum efforts to design jobs and job training opportunities for veterans who have received other than a dishonorable discharge within four years before the date of their application. (sec. 305(a) of Pub. L. 95-93).

14. Section 95.33 is amended by revising paragraphs (d) (2) (ii) and (d) (2) (iv), by adding paragraph (d) (4) (viii) (D), by revising paragraphs (d) (5) (i) (B), (d) (5) (ii) (C), and (d) (5) (ii) (D), and by adding (d) (5) (ii) (E) to read as follows:

§ 95.33 Types of manpower program activities available.

(d) . . . . .  
(2) . . . . .  
(ii) *Inducements to employers.* Prime sponsors may provide payments or other inducements to public or private employers for the bona fide training and related costs of enrolling individuals in the program; provided that payments to employers organized for profit are only made for the costs of recruiting, training and supportive services which are over and above those normally provided by the employer. Use of a formula which incorporates the trainee's wage as a factor and fixed unit cost contracting are acceptable methods of reimbursement to private-for-profit employers for extraordinary training costs associated with providing on-the-job training. When using a formula, the prime sponsor can reimburse the employer for extraordinary training costs for training on the job, up to a level not to exceed 50 percent of participant wages. Prime sponsors may design other methods of cost reimbursement provided that payments reflect only extraordinary training costs.

(iv) *Labor organization consultation.* Appropriate labor organizations shall be consulted in the design and conduct of on-the-job training programs where collective bargaining agreements exist with the employer. Prime sponsors shall consider the advice and comments of such labor organizations, when designing OJT programs and negotiating OJT contract provisions and shall ensure that wages for covered positions conform with collective bargaining agreements.

(4) . . . . .  
(viii) . . . . .  
(D) When a participant in a work experience activity is performing the tasks of regular public service employment type job, wages must be comparable to those paid for the regular public service job, as specified in § 96.34.

(5) . . . . .  
(i) . . . . .  
(B) Intake: This includes screening for eligibility; completion of Part A, B, and C of the Participant Record; the initial determination as to whether the program can benefit the individual; the determination of the manpower activities and services which would be appropriate for the applicant; the determination of the availability of an appropriation manpower activity; a decision on selection; and dissemination of information on the program.  
(ii) . . . . .

(C) *Employability Assessment* other than that involved during intake;  
(D) *Job Development*;  
(E) *Job Referral and Placement*;

15. Section 95.34 is amended by revising paragraph (c) (2), by revising paragraph (f), by revising paragraph (g) (1) (i) and by adding paragraphs (i) (6), (i) (7), and (j) (6) to read as follows:

§ 95.34 Training allowances.

(c) . . . . .  
(2) No allowances shall be paid for participation in any course or program of study (e.g., a B.A. or B.S. degree program) which exceeds 104 weeks. While prime sponsors may pay for the costs of tuition, books, and related training expenses of courses or programs of study exceeding 104 weeks, at no time during participation in such a course shall allowances be paid. (sec. 111(a)).

(f) *Dependents allowances.* (1) Dependents allowances of \$5 per week for each dependent in excess of two dependents, up to a maximum of \$20 for six or more dependents shall be provided to participants receiving basic allowances or who would be receiving basic allowances were it not for adjustments which are permitted pursuant to paragraph (i) of this section. Participants eligible for dependents allowances from other sources shall not be precluded from receiving dependents allowances funded under the Act.

(2) Dependents allowances may be reduced pro rata only for absences without good cause. The methodology for making the reduction shall be described in the approved PSA.

(g) . . . . .  
(1) . . . . .  
(i) Incentive allowances shall be reduced pro rata for absences without good cause. The methodology (e.g., daily or hourly proration) for making the reduction shall be described in the approved PSA.

(i) . . . . .  
(6) The basic allowance may be reduced by the amount of wages received by classroom training participants who are concurrently enrolled during the same payment period in either full-time work experience, public service employment, or on-the-job training funded under the Act. The determination of whether the other activity is full-time shall be based on the number of hours that constitute full-time employment for regular employees similarly employed at the employing agency or worksite.

(7) Incentive allowances for public assistance recipients may, at the option of the prime sponsor, be adjusted downward, provided that the adjustment shall not result in an incentive allowance payment at a rate less than the higher of the Federal, State, or local minimum wage multiplied by the number of hours of participation, which the trainee attends as required or is absent from for good cause.

(j) . . . . .  
(6) Incentive allowances shall not be waived.

16. Section 95.35 is amended by revising paragraph (d) to read as follows:  
§ 95.35 Wages.

(d) For hours spent in the production of goods or services, the rate of compensation to be paid to trainees by employers, public or private shall be specified in a written agreement entered into by the training or employing facility and the prime sponsor. Where hours spent in production of goods or services are in positions covered by collective bargaining agreements, wages paid to trainees by the employer shall not conflict with the terms of the collective bargaining agreement.

17. Section 95.38 is amended by revising paragraph (a) (1) to read as follows:

§ 95.38 Cooperative relationships between prime sponsor and other manpower agencies.

(a) (1) Each prime sponsor shall, to the extent feasible, establish cooperative relationships or linkages with other manpower and manpower-related agencies in the area within its jurisdiction, in particular, with agencies operating programs funded through the Department (Section 105(a) (3) (D)). Prime sponsors are encouraged to utilize the free direct placement services offered by the SESA's.

18. Section 95.52 is amended by adding paragraph (a) (2), by revising paragraphs (b) (1) and (b) (2), and by adding paragraph (b) (3) to read as follows:

§ 95.52 Grant application.

(a) . . . . .  
(2) The Governor shall comply with the preapplication and comment and publication requirements specified in 95.11 and § 95.15 (a), (b), (d), (e) and (f). In addition, the Governor shall provide 30 days prior to submission of the grant application for the purposes of commenting thereon:

(i) A summary of the grant application to each prime sponsor in the State and to units of general local government within the Balance-of-State with a population of at least 25,000;

(ii) A summary of the grant application to appropriate Indian prime sponsors and to labor organizations representing employees engaged in similar work in the same areas as that for which participants will receive subsidized employment or training; and

(iii) A summary of any programs to be funded within a prime sponsor's area with State Manpower Services funds to the prime sponsor in whose jurisdiction the program is to be funded.

(b) . . . . .  
(1) *Approval Request Letter.*  
(2) *Application for Federal Assistance.* Standard Form 424 as prescribed by FMC 74-7 is being used for the application for the special grant.

(3) *Special Grant Plan.* This plan consists of:

(i) *Special Grant-Program Planning Summary.* The Special Grant-Program Planning Summary is a multiprogram form providing for statistical entries on numbers of participants served by vocational education projects and State Manpower Services.

(ii) *Special Grant-Budget Information Summary.* The Special Grant-Budget Information Summary is a multiprogram form providing for entries on funds planned to be obligated and expended in vocational education projects. State Manpower Services Council and State manpower services.

(iii) *Special Grant Program Narrative.* The narrative for the special grant will be composed of three separate sections. The Program Narrative form contained in the *Forms Preparation Handbook* requires a detailed statement on the program including the following items:

(A) *Vocational Education Services Program Narrative.* (1) An explanation of the method used to allocate funds to prime sponsor areas and the rationale for the method used;

(2) An explanation for any nonfinancial agreement which was not reached between a prime sponsor and Vocational Education Board;

(3) A summary of all agreements required in § 95.56 between individual prime sponsors and the State Vocational Education Board. The summary should follow the procedures established for the development of individual program narratives supporting each nonfinancial agreement.

(4) A copy of each such agreement. If all of the nonfinancial agreements are not available when the application is submitted, the Governor shall describe the training and services which he expects to be supplied by the State Vocational Education Board to each prime sponsor. Nonfinancial agreements received after the grant is made will be forwarded to the RA; and

(5) An explanation of administrative costs which exceed 20 percent.

(B) *State Manpower Services Council Program Narrative.* (1) A listing of members of the Council, identifying the group each member represents;

(2) Identification of the chairman.

(3) A statement of the procedures which will be followed in reviewing prime sponsor plans and plans of State agencies and making recommendations which will provide more effective overall coordination of manpower services in the State; including a discussion of how the Council functions, the location, frequency, and publicizing of meetings, and whether minutes are kept and meetings are open to the public.

(4) A description of the system to be used in monitoring other prime sponsors and State manpower services;

(5) A description of the types of data, materials, and information which will be included in the annual report to the Governor;

(6) If the Governor plans to use part of the funds authorized for the Council under Section 103(d) of the Act (one percent of the allocation) for Section 106 (State services), the specific use of

the funds shall also be described, including the amount of funds and objectives to be accomplished.

(7) A breakdown of staff and other council costs. This breakdown should include administration, wages, and fringe benefits.

(C) *State Manpower Services Program Narrative.* (1) Explanation of steps taken to assure cooperation of State agencies with prime sponsors in implementing the program;

(2) Description of State plan for sharing of manpower resources and facilities for most efficient and economical operation;

(3) Coordination of programs financed under Wagner-Peyser Act to provide assistance to individuals in accordance with policies of this Act;

(4) An explanation of the arrangements made by the State to assist the Secretary in carrying out the Secretary's mandatory responsibilities for enforcing the requirements for Federal contractors to list all suitable employment openings with local offices of the State employment service and to take affirmative action as required in section 2012(a) of title 38, United States Code;

(5) A description of any arrangements for planning areas (see Part V of Attachment A, OMB Circular A-95) to serve geographical regions within the State;

(6) A description of provisions for coordination of the manpower and related services to be provided by the State in areas to be served by prime sponsors other than the State, including the exchange of information and coordination of manpower plans;

(7) A description of any of the activities allowable under Section 106(c) of the Act, that the State chooses to provide, detailing those activities to be undertaken and the costs and goals of such activities, including:

(i) A description of allowable services being delivered under the Act throughout the State, by State agencies responsible for employment, training, and related services (sec. 106(c) (1));

(ii) A description of special programs and services for rural areas outside major labor market areas; (sec. 106(c) (2));

(iii) A description of the extent to which information will be developed and published regarding economic, industrial, and labor market conditions;

(iv) A description of information and technical assistance to be provided to prime sponsors in the State; and

(v) A description of any model training and employment programs.

19. Section 95.53 is amended by revising the title and paragraphs (b) (2) and (d) to read as follows:

§ 95.53 Application approval and disapproval.

(b) . . . . .  
(2) It meets the requirements of the Act, the regulations promulgated under the Act, other applicable law, and if the RA determines that the Governor has demonstrated maximum efforts to meet the goals of the prior year's annual plan.

(c) . . . . .  
(d) If an application is approved, the RA shall provide the Governor with a letter indicating approval.

20. Section 95.54 is revised to read as follows:

§ 95.54 Modifications.

(a) A modification to a Governor's Special Grant Plan is required under any of the following conditions:

(1) Change in duration of the Plan;  
(2) Change in the Plan allotment;  
(3) Substantial change in program design and/or program goals defined as follows:

(i) When the cumulative number of individuals to be served or the planned placement terminations is to be increased or decreased by 15 percent or more.

(ii) When the cumulative transfer of funds among program activities or cost categories exceeds \$50,000 or 15 percent of the total grant budget whichever is greater.

(iii) When the program design is altered significantly (see § 95.21(b) (1) (iii) (D)).

(b) A-95 Clearance. (1) Modifications require clearance through the A-95 clearinghouse only under the following conditions:

(i) There is a cumulative increase or decrease in funds equal to or more than 15 percent of the Plan allotment for the current program year and/or;

(ii) The term of the Plan is extended for a period of more than 3 calendar months and/or;

(iii) The RA directs that A-95 clearance is required for a particular modification.

(2) (i) When A-95 clearance is required, the Governor, whenever possible, shall provide notification to the appropriate A-95 State and areawide clearinghouses of its intent to modify its Plan 60 days prior to submission of the formal modification to the RA. The notification of intent should consist of a revised form SF 424 and a brief description of the anticipated modification. If within 30 days from submission of such notification, the Governor receives no notification from the A-95 clearinghouses that they wish to review the modification, the Governor has fulfilled its obligation under A-95 and may submit the modification to the RA without submitting it to the A-95 clearinghouses as specified in paragraph (b) (2) (ii) of this section.

(ii) When the Governor has not provided notification as specified in paragraph (b) (2) (i) of this section or when the Governor has provided this notification and the clearinghouse(s) have requested to review the completed modification, the Governor shall in all cases submit a copy of its modification to the clearinghouses for comment 30 days prior to its submission to the RA.

(iii) Where no comments have been received from A-95 clearinghouses or where the clearinghouses have not requested to review the completed modification, the Governor shall so indicate in the appropriate item on the revised

SF 424, noting clearinghouses which sent no response after receiving the modification, and clearinghouses which did not request to review the completed modification after being notified of the Governor's intent to modify.

(c) The Governor may make any change, consistent with the regulations in this Part and Part 98, in its Program Planning Summary, Budget Information Summary, or narrative description which is not set out in paragraph (a) of this section without prior approval, but must show any such change in the First Program Status Summary and Financial Status Report, as appropriate, submitted to the Department after the change has been made. At the same time this report is submitted, an updated Program Planning Summary, Budget Information Summary, or narrative description, as appropriate, shall also be submitted to the RA. Only those lines and columns or portions of the narrative affected by the modification need be submitted. Comments and publication requirements do not apply to changes described in this paragraph (c).

(d) Special Grant Plan modifications shall not be initiated solely to adjust planned performance to meet actual performance.

(e) Format. Modifications pursuant to paragraphs (a) and (b) above shall consist of the following:

(1) Approval Request Letter;

(2) Revised Form SF 424 (if A-95 clearance is required);

(3) Revised Special Grant Program Planning Summary and Budget Information Summary for current and future quarters only; except that a modification not involving a change in the grant allotment must be received in the regional office within 30 days of the beginning of the current quarter in order to include changes to the current quarter goals.

(4) Narrative description of the changes made and certification that the review and comment procedures in paragraph (f) have been complied with.

(5) A copy of the newspaper announcement required in paragraph (f) of this section.

(6) Revised portions of the narrative description, if appropriate.

(f) Publication and Comment. (1) No later than the date of submission to the RA, the Governor shall provide a summary of any modification pursuant to paragraphs (a) and (b) of this section to each prime sponsor in the State and units of general local government within the Balance of State with a population of at least 25,000, to appropriate Indian sponsors, and to labor organizations representing employees engaged in similar work in the same area as that for which participants will receive subsidized employment or training; and the Governor shall publish in a minimum of one issue of a newspaper or newspapers (including minority news paper(s), where feasible) of general circulation throughout the area to be served a notice of the intent to request a modification, a brief summary of the purpose of the proposed modification, and the location and hours

when the complete modification can be reviewed and the phone number where questions and comments may be directed.

(2) Comments pursuant to paragraphs (b) (2) (ii) and (f) (1) of this section shall be made to the Governor and the RA within 30 days of publication. All substantive written comments and responses shall be transmitted to the RA with the modification, unless comments are received after the modification's submission, in which case they shall be sent separately to the RA.

(3) The Governor shall acknowledge any written comment made pursuant to this section, and shall inform any party submitting a substantive written comment of whether any plan revision will be made in response to the comment and the reasons for such determination.

(g) Notification of Action. (1) The RA shall take final action on approval or disapproval of any proposed modification within 30 days of receipt. Within 7-days after taking action, the RA shall notify the Governor of the action.

(2) A denial of a Governor's request for a modification shall be subject to the appeal procedures set out in Part 98 of this chapter.

(3) The procedures in § 95.18(c) (1) and (2) shall apply to modifications under paragraph (b) of this section.

(h) The procedures for incremental funding are the same as those specified in § 95.21 of Subpart A.

#### PART 96—PROGRAMS UNDER TITLE II OF THE COMPREHENSIVE EMPLOYMENT AND TRAINING ACT

21. The table of contents for Part 96 is revised to read as follows:

Subpart A—General	
Sec. 96.1	Scope and purpose.
96.2	Allocation of funds.
96.3	Eligibility for funds.
Subpart B—Grant Application	
96.10	General.
96.11	Preapplication for Federal Assistance; consortium designation.
96.12	Eligible applicant designation.
96.13	Planning process; advisory councils.
96.14	Content and description of grant application.
96.15	Comment and publication procedures relating to submission of grant application.
96.16	Submission of grant application; standards for reviewing grant applications.
96.17	Application approval; application disapproval; grant agreement.
96.18	Use of alternative eligible applicant; services by the Secretary.
96.19	Modifications.
Subpart C—Program Operation	
96.20	General.
96.21	Basic responsibilities of eligible applicants.
96.22	Basic responsibilities of program agents; relationship with eligible applicants.
96.23	Acceptable public employment positions.
96.24	Maintenance of effort.
96.25	Responsibility for selecting participants.
96.26	Place of residence for participants.
96.27	Eligibility for participation in a Title II program.

96.28 Equitable service to the unemployed population; serving significant segments.

96.29 Groups to be provided special consideration within the significant segment groups served.

96.30 Serving the most severely disadvantaged persons.

96.31 Training and supportive services.

96.32 Linkages with other manpower programs.

96.33 Placement goals.

96.34 Compensation for participants.

96.35 Administrative staff.

96.36 Use of Title II funds for programs under Titles I and III—A

Subpart D—Special Conditions for Grants to Indian Tribes on Federal and State Reservations

96.40 General.

96.41 Distribution of funds.

96.42 Eligibility for funds.

96.43 Funding of eligible applicants.

96.44 Planning process; advisory councils.

96.45 Comment and publication procedures relating to submission of Indian grant applications.

96.46 Assistance by the Director, Division of Indian and Native American Programs.

96.47 Participant eligibility.

96.48 Nepotism.

96.49 Nondiscrimination.

96.50 Subgrants.

96.51 Travel requirements.

AUTHORITY: Comprehensive Employment and Training Act of 1973, as amended (Pub. L. 93-203, 87 Stat. 839; Pub. L. 93-567, 88 Stat. 1845), sec. 702(a), unless otherwise noted.

22. Section 96.14 is revised to read as follows:

§ 96.14 Content and description of grant application.

(a) General. (1) This section describes the grant application for funds under Title II of the Act. Copies of all forms and instructions are contained in the *Forms Preparation Handbook*.

(b) An Annual Plan for Title II must be submitted by prime sponsors on a date set by the Secretary. The Annual Plan consists of the following:

(1) *Application for Federal Assistance*. This form is described in § 95.14 (c) (1).

(2) *Annual Narrative Description of Program*. The annual narrative description requirements for Title II are the same as those described in § 95.14(c) (2) for Title I programs. A detailed statement on each of those items must be provided as part of the Title II Annual Plan, except as provided below:

(i) The information required under § 95.14(c) (2) (iii) (A), program activities and services, shall only be provided if the Title II applicant intends to conduct Title I activities with Title II funds.

(ii) If the Title II applicant's geographical area differs from the Title I geographical area described in the PSA, the information required under geographical area to be served, as specified in § 95.14(b) (2) (ii) shall be provided for the Title II area.

(3) *Program Planning Summary*. This form is described in § 95.14(c) (3).

(4) *Budget Information Summary*. This form is described in § 95.14(c) (4).

(5) *Public Service Employment Occupational Summary*. This form is described in § 95.14(c) (5).

(6) *Monthly Schedule*. A monthly estimate of total individuals enrolled at the end of the month and total cumulative expenditures shall be provided. Such monthly schedule will reflect the activity for each month during the grant period under Title II.

(7) *Program Summary*. The Program Summary presents a distribution of jobs, training slots, and funds to be provided to eligible applicants and subgrantees. It designates the area to be served, the population and employing agencies of each area.

23. Section 96.19 is revised to read as follows:

§ 96.19 Modifications.

The modification procedures set forth in § 95.21 of this title shall apply to Title II grants. In addition, modifications pursuant to §§ 95.21(b) (1) and (3) of this title shall include a revised program summary, if appropriate.

24. Section 96.23 is amended by revising paragraph (b) (5) to read as follows:

§ 96.23 Acceptable public employment positions.

(b) . . . .

(5) To the extent consistent with the maintenance of effort requirements of § 96.24, the participant activity limitations of § 98.23 and the personnel procedures and collective bargaining agreements of the eligible applicant and the private nonprofit agencies, jobs may also be allocated to private nonprofit agencies, such as educational, social service, and health agencies, which provide public services, as defined in § 94.4, within an eligible applicant's jurisdiction. Jobs may be allocated to such agencies provided: they offer public services for the general public and not primarily or exclusively for the benefit of their membership or constituencies; and they are determined to best serve the unemployed population based on the considerations stated in § 96.23(b) (4). Such jobs may include positions in Job Corps Centers other than those operated by private for profit organizations.

25. Section 96.27 is amended by revising paragraphs (b) and (g) to read as follows:

§ 96.27 Eligibility for participation in a Title II program.

(b) A veteran who has served on active duty for a period of more than 180 days or who was discharged or released from active duty for a service connected disability, shall be immediately eligible, upon discharge or release for participation in a program under Title II of the Act without regard to the 30-day unemployment requirement which would otherwise pertain (38 U.S.C. 2013), provided such veteran has not obtained permanent full-time unsubsidized employment between the time of discharge

or release from active duty and the time of application for participation in Title II.

(g) Program participation shall be limited to citizens of the United States, natives of American Samoa and the Trust Territory of the Pacific Islands, permanent resident aliens and other aliens who have been permitted to accept permanent employment in the United States by the Immigration and Naturalization Service.

26. Section 96.28 is revised to read as follows:

§ 96.28 Equitable service to the unemployed population; serving significant segments.

(a) Providing equitable services to the demographic groups (age, sex, race) within its unemployed population, taking into account the significant segments most in need of service and the incidence of underemployment in the prime sponsor's jurisdiction. Where variances as specified in § 95.14 occur in service to the demographic groups, they shall be adequately justified in the Annual Plan.

(b) The prime sponsor shall take positive steps, such as active recruitment, to insure that the significant segments in its approved plan of service are served.

27. Section 96.29 is revised to read as follows:

§ 96.29 Groups to be provided special consideration within the significant segment groups served.

Special consideration shall be given to:

(a) *Veterans*. (1) Eligible applicants shall take appropriate steps to provide for the increased participation of qualified disabled veterans and qualified Vietnam-era veterans who are under 35 years of age in programs under title II. Specific effort should be made to develop appropriate full or part-time opportunities for such veterans. Each eligible applicant shall develop local goals for service to such veterans, taking into consideration their numbers and the number of qualified persons in significant segments of the population in the area served. These goals shall be included in the eligible applicant's Annual Plan. The eligible applicant should utilize the assistance of the State and local veterans' employment service representatives in meeting these goals. In order to insure special consideration for veterans, all public service employment vacancies under title II, except those to which former employees are being recalled, and those into which CETA participants are being transferred, must be listed with the State employment service at least 48 hours (excluding Saturdays, Sundays, and holidays) before such vacancies are filled. During this period those veterans specified above who fall within the significant segments to be served will be referred by SESAS. If sufficient numbers of veterans are not available, the employment service, upon request, may also refer members of other significant segments. In addition, eligible applicants shall, in filling public service jobs, give

special consideration to special veterans; and, they shall exercise maximum efforts to design jobs and job training opportunities for veterans who have received other than a dishonorable discharge within four years before the date of their application. (sec. 205(c) (5)).

(2) Each eligible applicant shall, on a continuing and timely basis, provide information on job vacancies and training opportunities funded under Title II of the Act to State and local veterans employment representatives and to other veterans organizations for the purpose of disseminating information to eligible veterans (sec. 104(b) of Emergency Jobs and Unemployment Assistance Act of 1974).

(b) *Welfare recipients*. Eligible applicants shall give special consideration to welfare recipients by taking them into account when selecting participants within significant segments and/or by identifying them as a significant segment in the Annual Plan.

(c) *Former manpower trainees*. Due consideration shall be given, in developing an eligible applicant's plan and enrolling individuals in the manpower programs funded under Title II of the Act, to persons, falling within the significant segments to be served, who have participated in manpower training programs and for whom work opportunities are not otherwise immediately available (sec. 205(c) (9)).

(d) *Teachers*. In filling teaching positions in elementary and secondary schools, each eligible applicant shall give special consideration to unemployed persons with previous teaching experience who are certified by the State in which that prime sponsor is located (Sec. 205(d)).

28. Section 95.30 is revised to read as follows:

§ 96.30 Serving the most severely disadvantaged persons.

In meeting the requirements of §§ 96.28 and 96.29 above, the eligible applicant shall give priority to unemployed persons who are the most severely disadvantaged in terms of the length of time they have been unemployed and their prospects for finding employment without assistance under Title II (secs. 205(c) (7) and 210).

29. Section 96.33 is amended by revising paragraph (c) to read as follows:

§ 96.33 Placement goals.

(c) (1) To carry out the intent of paragraph (b) of this section, each eligible applicant, program agent and subgrantee, to the extent consistent with law and applicable collective bargaining agreements, shall have the goal of accomplishing on an annual basis at least one of the following:

(i) Placing half of the cumulative number of participants terminated in unsubsidized private or public sector employment;

(ii) Placing participants in half the vacancies occurring in suitable occupations in an eligible applicant, program

agent, or subgrantee's permanent work force which are not filled by promotion from within the agency.

(2) When a suitable job offer or offer of referral to a suitable job is made to and rejected by a participant, this can be construed as being acceptable grounds for termination of the participant by the prime sponsor regardless of how long the individual has been in the program. Suitable job shall mean a job which is: comparable to the participant's CETA job in terms of working conditions and benefits; the same or equivalent to the participant's CETA job or otherwise commensurate with his/her skill level; located within a commuting distance of the participant's home comparable to the distance traveled by others in the jurisdiction similarly employed; and not vacant due to a strike or based on a requirement that an employee must join or resign from a union.

30. Section 96.34 is amended by revising paragraph (a) (1) to read as follows:

**§ 96.34 Compensation for participants.**

(a) . . . .  
(1) The minimum hourly wage set out in sec. 6(a) (1) of the Fair Labor Standards Act of 1938, as amended. The exceptions to Section 6(a) (1) shall not apply to public service employment participants.

31. Section 96.36 is revised to read as follows:

**§ 96.36 Use of Title II funds for programs under Titles I and III-A.**

Funds available to an eligible applicant may, at its option, be utilized for residents of the areas of substantial unemployment designated under this Part for programs authorized under Title I or Part A of Title III of the Act. Where Title II funds are used for activities other than PSE authorized under other Titles of the Act, all provisions under this part, except § 96.21 (b), (c), (e), (g), and (h), § 96.27 (e), § 96.31, § 96.33, § 96.34, and § 96.36, shall apply in addition to those provisions applicable for programs under Title I or Part A of Title III (sec. 210); however, when Title II funds are used to fund public service employment, all of the provisions of this Part 96 shall apply.

32. Section 96.43 is revised to read as follows:

**§ 96.43 Funding of eligible applicants.**

(a) In order to be funded, a potentially eligible applicant must request to operate a program under Title II by complying with the provisions of § 97.111 of the regulations for Indian Employment and Training Programs funded under Section 302 of the Act.

(b) Each potentially eligible applicant will receive a tentative allocation against which it will prepare and submit its grant application.

(c) *General.* The grant application will consist of two documents, the Prime Sponsor Agreement (PSA) and the Annual Plan (AP). Detailed instructions for completing the application are con-

tained in the Forms Preparation Handbook.

(1) *Prime sponsor agreement.* An applicant applying for the first time shall not later than 30 days prior to submission of the Annual Plan submit to the Director, Division of Indian and Native American Programs (DINAP), a signed copy of the PSA. An applicant who has already effected a PSA shall submit with the Annual Plan to the Director, DINAP, a certification that the PSA remains the same or is revised in certain respects which are attached to the certification. The initial submission and subsequent certifications are subject to the comment and publication procedures of § 96.45. The PSA consists of:

(i) A signatory page (see § 95.14 (b) (1));  
(ii) A narrative description of general information; and  
(iii) Assurances and certifications.

(2) *Annual plan.* On a date set by the Director, DINAP, an Annual Plan must be submitted to the Director, DINAP. The submission of the AP is subject to the comment and publication procedures of § 96.45. The Annual Plan consists of:

(i) An Application for Federal Assistance. (See § 95.14 (c) (1));  
(ii) An Annual Narrative Description of Program;

(iii) A Program Planning Summary (see § 95.14 (c) (3));  
(iv) A Budget Information Summary (see § 95.14 (c) (4));

(v) A Public Service Employment Occupational Summary (see § 95.14 (c) (5));

(vi) A Monthly Schedule (see § 96.14 (b) (6)); and

(vii) A Program Summary (see § 96.14 (b) (7)).

**PART 98—ADMINISTRATIVE PROVISIONS FOR PROGRAMS UNDER THE COMPREHENSIVE EMPLOYMENT AND TRAINING ACT**

33. The table of contents for Part 98 is revised to read as follows:

Subpart A—Grant Administration	
Sec.	General.
98.1	Payment.
98.2	Letter of credit.
98.3	Payment by Treasury check.
98.4	Financial management systems.
98.5	Audit.
98.6	Reporting requirements in general.
98.7	Program Status Summary, Financial Status Report and Monthly Progress Report.
98.8	Quarterly Summary of Participant Characteristics.
98.9	Report of Federal Cash Transactions.
98.10	Reallocation of funds.
98.11	Allowable Federal costs.
98.12	Allocation of allowable costs among program activities.
98.13	Basic personnel standards for grantees.
98.14	Adjustments in payments.
98.15	Termination of grant; suspension of grant in emergency situations.
98.16	Annual Plan settlement procedures.
98.17	Maintenance and retention of records.
98.18	Program income.
98.19	Procurement and property management standards.
98.20	

98.21 Nondiscrimination and equal employment opportunities.

98.22 Nepotism.

98.23 Special limitations on participant activities.

98.24 General benefits and working conditions for program participants.

98.25 Retirement programs.

98.26 Procedures for resolving issues between grantees and complainants.

98.27 Grantee contracts and subgrantees.

98.28 Non-Federal status of participants.

98.29 Applicability of Davis-Bacon wage rates to projects under the Act.

98.29a Job Corps training opportunities for CETA grantees.

**Subpart B—Assessment and Evaluation**

98.30 General.

98.31 Responsibilities of the prime sponsor or eligible applicant.

98.32 Responsibilities of the Secretary.

98.33 Limitation.

98.34 Consultation with the Secretary of Health, Education, and Welfare.

**Subpart C—Hearings and Judicial Review**

98.40 Purpose and policy.

98.41 Review of plans and applications, violations.

98.42 Complaints; filing of formal allegations; dismissal.

98.43 Form.

98.44 Contents of formal allegation; amendment.

98.45 Investigations.

98.46 Opportunity for hearings; when required.

98.47 Hearings.

98.48 Initial certification, decisions and notices.

98.49 Judicial review.

*AUTHORITY:* Comprehensive Employment and Training Act of 1973, as amended (Pub. L. 93-203), 87 Stat. 839; Pub. L. 93-567, 88 Stat. 1845), sec. 702(a), unless otherwise noted.

34. Section 98.6 is amended by revising paragraphs (e) (1) and (2) to read as follows:

**§ 98.6 Audit.**

(e) (1) Each grantee shall establish and maintain an audit program for its contractors and subgrantees to the extent necessary to insure adequate financial management and conformance with Federal requirements. The Governor shall also establish and maintain such an audit program for vocational education services and activities funded pursuant to § 95.2 (c) (4).

(2) Each grantee shall conduct at least once every two years an independent audit of each contractor or subgrantee providing activities and services amounting to a cost of \$100,000 or more during one grant year. Audits of those subgrantees or contractors providing activities and services under \$100,000 may be conducted on a sample basis as coordinated with and approved by the Regional Administrator for Audit. Of the awards of less than \$100,000, the sample selected shall include at least 25% of the total number of awards or 25 percent of the total dollars awarded, during a two-year period. The auditing of contractors and subgrantees on a sample basis in no way lessens the prime sponsor's responsibility to insure that program activities and related costs incurred by contractors and subgrantees are in compliance with

Federal requirements as stated in § 98.5(a). Fixed price contracts for non-program, administrative type procurements such as typewriter maintenance, administrative supplies, etc., do not require independent audits. The two-year audit period shall begin with Fiscal Year 1976.

35. Section 98.12 is amended by revising paragraphs (b), (c), (e) (2), (f) (2), (f) (5), (f) (5) (i), (f) (5) (ii), (f) (5) (iii), and (g) (6) to read as follows:

**§ 98.12 Allowable Federal costs.**

(b) *Restriction on use of funds.*—(1) *Public service employment programs.* (i) Not less than 85 percent of the funds appropriated pursuant to the Act which are used by an eligible applicant for public service employment programs shall be expended for wages and fringe benefits to persons employed in public service jobs (sec. 203(b)).

(ii) The remaining 15 percent may be used for administration, training, supportive services to public service employment participants; for the acquisition, rental, or leasing of necessary supplies, equipment, and materials, except as limited by paragraph (c) of this section; and for the rental or leasing of real property. An eligible applicant which does not itself administer the entire program may not retain the entire 15 percent for its own use unless this is agreed to by its subgrantees. Unless otherwise agreed to, at least 50 percent of the amount used for the administration of the program shall be available to subgrantees for administrative costs.

(2) No funds granted under the Act may be used, directly or indirectly, as a contribution for the purpose of obtaining Federal funds under any other law of the United States which requires a contribution from the grantee in order to receive such funds, except if authorized under that law. However, the use of funds granted under the Act as a matching contribution in order to obtain additional funds under the Act is not prohibited.

(3) Unless otherwise provided in Parts 94-99, funds provided under one grant under the Act may not be used to support costs of another grant under the Act.

(c) *Expenditures for repairs, maintenance, and capital improvements and for construction; home repair; winterization/weatherization.* (1) Funds for construction, as defined in § 94.4 (o), and for repairs, maintenance and capital improvements to existing facilities are allowable only under the following conditions:

(i) To pay wages and fringe benefits for public service employment participants;

(ii) To purchase equipment, materials, and supplies for use by public service employment participants while on the job and for use in the training of public service employment participants, excluding materials which become part of the construction;

(iii) To cover costs of a training program in a construction occupation, including costs such as instructors' sala-

ries, training tools, and books, and allowance and wages; but not including materials which become part of the construction, and only when such construction would not normally be performed by an outside contractor.

(2) Consistent with maintenance of effort requirements of this subtitle, the cost of participant salaries and fringe benefits shall be allowable costs when such participants are used in home repair and winterization/weatherization activities where work performed will not inure primarily to the benefit of a profit-making organization. Home repair and winterization/weatherization activities shall be limited to dwellings of individuals who are at or below 125 percent of the poverty level (as defined in § 94.4) which are privately owned and owner-occupied, privately owned by a nonprofit organization, units of public housing, or privately owned rental housing projects funded and approved by the Federal Energy Administration or the Community Services Administration. (704(f)).

(3) Costs associated with building repairs, maintenance, and capital improvements of existing facilities used primarily for programs under the Act are allowable.

(c) . . . .

(2) Participants' fringe benefits shall be charged to fringe benefits (premiums for medical and accident insurance for participants enrolled in classroom training and services to participants is considered to be a training or service cost as appropriate).

(f) . . . .

(2) *Fringe Benefits.* Allowable fringe benefit costs for participants include, but are not limited to the following: annual, sick, court and military leave pursuant to an approved leave system; employer's contribution for social security, employees' life and health insurance plans, unemployment insurance where applicable, workers' compensation insurance and retirement benefits, provided such benefits are granted under an approved plan, and, under public service employment programs, training materials, work tools, uniforms, or other equipment ordinarily provided by the employer to its regular employees, provided these are for the benefit and ownership of the participants. Cost of living increases may not be charged to fringe benefits.

(5) *Services.* Services include, but are not limited to services to applicants, supportive and manpower services, as set forth in § 95.33 (d) (5).

(i) *Services to applicants include outreach and intake.*

(ii) *Supportive services include child care, health care, medical and dental services, residential support, assistance in securing bonding, transportation, family planning and legal services.*

(iii) *Manpower services include orientation, counseling, job development, job placement, and employability assessment.*

(g) . . . .

(6) Travel costs to enable participants to obtain employment or to participate in programs under the Act are allowable as supportive services. Such travel shall be restricted to the grantee's jurisdiction or within daily commuting distance, except:

(i) As provided under § 98.29a(f);

(ii) To pay for transportation costs at the beginning and end of a training course which is more than daily commuting distance but within the State in which the prime sponsor is located;

(iii) As permitted for good cause by the RA, on a case by case basis, within the United States.

36. Section 98.14 is revised to read as follows:

**§ 98.14 Basic Personnel Standards for Grantees.**

(a) Methods of personnel administration will be established and maintained by each prime sponsor and eligible applicant in the public agencies administering the program for employees including participants engaged in the administration of the Act. Such methods shall be in conformity with the Intergovernmental Personnel Act (IPA) Merit Principles, Pub. L. 91-648, Section 2, administered by the U.S. Civil Service Commission. Prime sponsors whose personnel systems have been accepted by the U.S. Civil Service Commission as being in conformity with the Standards for a Merit System of Personnel Administration (45 CFR Part 70), including any amendments thereto, shall be deemed to be in compliance with this section (Sec. 703.14).

(b) Except as provided in paragraph (c) of this section, any prime sponsor or eligible applicant whose personnel system has not been accepted as meeting the requirements of this section shall provide to the RA for approval a plan and steps to be taken for attaining an acceptable system and a reasonable date for completing the plan; and also shall provide a list of those steps it has already taken to provide for merit based personnel system coverage. This plan and description of steps taken shall be submitted to the RA as part of the grant application.

(c) (1) The following are not subject to the requirements of paragraphs (a) and (b) of this section:

(i) Any non-governmental prime sponsor;

(ii) A consortium administrative unit which is not a unit of government;

(iii) Staff of contractors, subgrantees, title II program agents and employing agencies and titles I, II, and VI program participants; and

(iv) Employees of the prime sponsor's jurisdiction not engaged in the administration of CETA.

(2) A consortium administered by one of the member governments or a unit thereof or a unit of government not a member shall be subject to paragraphs (a) and (b) of this section.

(d) Units whose staff are exempt under paragraph (c) of this section shall insure equal employment opportunity

based on objective procedures of recruitment, selection, promotion, classification, compensation, performance evaluation, and employee management relations and are encouraged to develop procedures reflective of the principles contained in the IPA.

(e) Prime sponsors and eligible applicants should include individuals on their CETA administrative staffs which at all levels are reflective of the composition of the population to be served by the program within its jurisdiction.

37. Section 98.17 is revised to read as follows:

**§ 98.17 Annual Plan settlement procedures.**

(a) The settlement of an Annual Plan is the process by which the Department of Labor determines that all applicable administrative actions and all required work of the Annual Plan have been completed by the grantee and the grantor. The following procedures will be complied with during the process of determination:

(b) By a date specified by the RA, each grantee shall submit a TWX containing the following information on each expiring annual plan:

- (1) Total fund availability;
- (2) Estimated accrued expenditures;
- (3) Estimated carryout.

(c) The RA shall issue a notice of fund availability to transfer carryout from the previous Annual Plan. A second notice of fund availability shall be issued by the RA to transfer the carryout from the previous Annual Plan into a new Annual Plan.

(d) By a date specified by the RA, each prime sponsor shall submit:

- (1) A final FSR for the previous year's annual plans;
- (2) A final Report of Federal Cash Transactions for the previous year's annual plans; and
- (3) If applicable, a list of unliquidated liabilities for the previous year's annual plans.

(e) If the final reports are acceptable, the RA shall effect settlement by transferring remaining funds into the current year's annual plans. Final settlement of expired Annual Plans shall not be complete until a final audit has been performed, audit findings have been resolved and final reports have been submitted.

(f) *End of Prime Sponsor Agreement.* The Prime Sponsor Agreement has no end or termination date. However, under the following conditions the Prime Sponsor Agreement shall no longer be in effect:

(1) When all activity under all Annual Plans has been completed and final settlement under those Annual Plans including an inventory settlement under the PSA has been reached.

(2) When the PSA is a multiparty agreement and one or more signatory parties has legally withdrawn from the agreement and an inventory settlement under the PSA has been reached.

(3) When all annual plans have been terminated, as provided in § 98.16, and

final settlement under those annual plans, including an inventory settlement under the PSA has been reached.

38. Section 98.22 is amended by revising paragraphs (a) and (b) (3) to read as follows:

**§ 98.22 Nepotism.**

(a) *Restriction.* No grantee, subgrantee, contractor, or employing agency may hire a person in an administrative capacity, staff position or public service employment position funded under the Act if a member of his or her immediate family is engaged in an administrative capacity for the same grantee or its subgrantees, contractors, or employing agencies. Where a State or local statute regarding nepotism exists which is more restrictive than this policy, the eligible applicant should follow the State or local statute in lieu of this policy.

(b) . . . . .  
(3) The term "person in an administrative capacity" includes: those persons who have overall administrative responsibility for a program, including all elected and appointed officials who have any responsibility for the obtaining of and/or approval of any grant funded under the Act, such as members of the prime sponsor planning council, as well as other officials who have an influence or control over the administration of the program, such as the project director, deputy director and unit chiefs; and persons who have selection, hiring, placement or supervisory responsibilities for public service employment participants.

39. Section 98.24 is amended by revising paragraph (a) to read as follows:

**§ 98.24 General benefits and working conditions for program participants.**

(a) (1) Each participant in an on-the-job training, work experience or public service employment program under the Act shall be assured of workers' compensation at the same level and to the same extent as other employees of the employer who are covered by a State or industry workers' compensation statute. Whether provided through the State's compensation agency or a private insurance carrier, this coverage includes medical and accident insurance as well as income maintenance insurance.

(2) Where a participant is employed or engaged in any CETA program activity, i.e., work experience, public service employment, on-the-job training, classroom training, services to participants and other activities where others similarly employed or engaged are not covered by an applicable workers' compensation statute, the participant shall be provided with medical and accident insurance coverage. Whether provided through the State's workers' compensation agency or a private insurance carrier, the prime sponsor shall provide such participants with medical and accident insurance coverage comparable to the medical and accident insurance provided under the applicable State workers' compensation statute. However, prime sponsors shall not be required to provide these partici-

pants with the income maintenance insurance coverage in the statute.

40. Section 98.41 is amended by revising paragraph (a) to read as follows:

**§ 98.41 Review of plans and applications, violations.**

(a) The Secretary shall not finally disapprove any Comprehensive Manpower Plan or Application for financial assistance submitted under any title of the Act (except where other procedures are set forth e.g., § 97.292), or any modifications, or amendments thereof, without first affording the grantee submitting the plan or application reasonable notice and opportunity for a hearing as provided in § 98.47 et seq.

Signed in Washington, D.C., this 13th day of September 1977.

ERNEST G. GREEN,  
Assistant Secretary for Employment and Training Administration.

[FR Doc. 77-28580 Filed 9-29-77; 8:45 am]

[4510-23]

**Title 29—Labor**

**SUBTITLE A—OFFICE OF THE SECRETARY OF LABOR**

**PART 94—GENERAL PROVISIONS FOR PROGRAMS UNDER THE COMPREHENSIVE EMPLOYMENT AND TRAINING ACT**

**PART 99—PROGRAMS UNDER TITLE VI OF THE COMPREHENSIVE EMPLOYMENT AND TRAINING ACT**

**Youth Employment and Demonstration Projects**

AGENCY: Employment and Training Administration, Labor.

ACTION: Final rule.

SUMMARY: These rules amend the Comprehensive Employment and Training Act (CETA) regulations governing the public service jobs program under Title VI of CETA. The purpose of this rulemaking is to implement the amendments made to Title VI by the Youth Employment and Demonstration Projects Act of 1977.

EFFECTIVE DATE: October 31, 1977.

FOR FURTHER INFORMATION CONTACT:

Robert T. Jones, Director, Office of Comprehensive Employment Programs, U.S. Department of Labor, 6th and D Streets NW., Washington, D.C. 20213. Telephone No. 202-376-6366.

**SUPPLEMENTARY INFORMATION:**

**SUMMARY OF PROPOSED CHANGES**

1. In § 94.4, Definitions, a new paragraph (uuu) has been added which defines the term "unemployed person" for Title VI purposes. This definition is needed because unemployed persons are one class of persons whose eligibility for participation in projects under Title VI was clarified by section 307 of the Youth

Employment and Demonstration Projects Act of 1977.

2. In § 99.42, Eligibility for participation in Title VI programs: (a) The eligibility requirements are revised to implement section 608(a)(1)(A) of CETA, as amended by section 307 of the Youth Employment and Demonstration Projects Act of 1977.

(b) Paragraph (a)(5) is revised to correct a minor typographical error.

3. In § 99.44, Special consideration on selection: (a) A new paragraph (a) has been added to implement section 205(d) of CETA, as added by section 306(a) of the Youth Employment and Demonstration Projects Act of 1977.

(b) The existing paragraph under § 99.44 is designated as paragraph (b).

Since the changes being made are to incorporate the statutory amendments made by the Youth Employment and Demonstration Projects Act of 1977 and since the Act has already been signed into law by the President, the Department finds good cause for using final rather than proposed rulemaking. Although these regulations will take effect thirty (30) days after publication, prime sponsors are reminded that the statutory changes have already become law.

Accordingly, 29 CFR Parts 94 and 99 are amended as follows:

1. Section 94.4, Definitions, is amended by adding paragraph (uuu) to read as follows:

**§ 94.4 Definitions.**

(uuu) "Unemployed person" shall mean for Title VI purposes a person who is without a job and who wants and is

available for work, including any person who has been discouraged from seeking work but is currently available for work. For purposes of this definition a person is considered to be "without a job" during any calendar week in which he/she has worked no more than a total of ten (10) hours and/or has earned no more than \$30.

2. Section 99.42(a)(1)(i) through (iv) are revised to read as follows:

**§ 99.42 Eligibility for participation in Title VI Programs.**

(a) . . . . .  
(1) . . . . .

(i) Who, during 15 of the 20 weeks immediately prior to application, has been unemployed as defined in § 94.4(uuu) of this subtitle or has been receiving unemployment compensation: *Provided*, That during the 20 week period, the eligible person shall not have obtained permanent, unsubsidized, full-time employment; or

(ii) Who, during 15 of the 20 weeks immediately prior to application, has had a combination of weeks of unemployment and weeks of receiving unemployment compensation as described in paragraph (a)(1)(i) of this section: *Provided*, That during the 20 week period, the eligible person shall not have obtained permanent, unsubsidized, full-time employment; or

(iii) Who is unemployed as defined in § 94.4(uuu) of this subtitle at the time of application and is an exhaustee as defined in § 94.4(rrr) of this subtitle; or

(iv) Whose family is receiving Aid to Families with Dependent Children

(AFDC) including AFDC-Unemployed Fathers, under Title IV of the Social Security Act.

**§ 99.42 [Amended]**

3. Section 99.42(a)(5) is amended by adding the word "or" between the words "release" and "discharge".

4. Section 99.44 is revised to read as follows:

**§ 99.44 Special considerations on selection.**

(a) In filling teaching positions in elementary and secondary schools, each prime sponsor shall give special consideration to eligible unemployed persons with previous teaching experience who are certified by the State in which that prime sponsor is located (sec. 602(f)).

(b) In providing public service jobs and determining hours of work for individuals eligible pursuant to §§ 99.40(a)(2) and 99.40(b)(1), each prime sponsor shall take into consideration the household support obligations of the individuals and shall give special consideration to such alternative working arrangements as flexible hours of work, shared time and part-time jobs, for participants with particular needs, e.g., parents of young children, older persons, and handicapped individuals (sec. 608(d)).

Signed at Washington, D.C., this 14th day of September 1977.

ERNEST G. GREEN,  
Assistant Secretary for Employment and Training.

[ Docket No. 77N-0255 ]

## MEDICAL DEVICES

## Device Listing Procedures

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: This proposal prescribes procedures for listing medical devices pursuant to section 510 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 360) and sets forth who must list devices, the times for listing, and how and when devices must be listed.

DATES: Comments by November 29, 1977. The Commissioner proposes that the final regulations based on this proposal shall be effective on October 31, 1977.

ADDRESS: Written comments (four copies) to the Hearing Clerk (HFC-20), Food and Drug Administration, room 4-65, 5600 Fishers Lane, Rockville, Md. 20857.

FOR FURTHER INFORMATION CONTACT:

Thomas V. Kelley, Bureau of Medical Devices (HFK-124), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, Md. 20910 (301-427-7190).

SUPPLEMENTARY INFORMATION: Final regulations for Part 807 (21 CFR Part 807) governing establishment registration were published in the FEDERAL REGISTER of August 23, 1977 (42 FR 42520). This proposal amends Part 807 to prescribe the information required to satisfy the device listing requirements of section 510 of the act.

In the FEDERAL REGISTER of December 28, 1976 (41 FR 56397), the Food and Drug Administration (FDA) gave notice of the agency's procedures for implementing the device listing requirements. The notice informed owners and operators of medical device establishments that FDA would not require device listing information by December 31, 1976, but would rather, as discussed below, implement the device listing requirements in 1977 by mailing the necessary procedures, forms, and other related information to the official correspondent for each registered establishment.

Section 510(j) of the act requires every person who registers with FDA to file a list of all devices being manufactured, prepared, propagated, compounded or processed by him for commercial distribution. This list is to be prepared in such form and manner as the Commissioner may prescribe.

Section 510(j) of the act also requires the submission of the following additional information with the device list-

ing: the listing for a device for which a performance standard has been established under section 514 of the act (21 U.S.C. 360d) or which is subject to section 515 of the act (21 U.S.C. 360e) must be accompanied by a reference to the authority for the marketing of the device and a copy of all labeling for such device; the listing for a restricted device must be accompanied by a copy of all labeling for the device, a representative sampling of advertisements for the device, and, upon request made by the Commissioner for good cause, a copy of all advertisements for the device; the listing of a device that is not a restricted device must be accompanied by the label and package insert for the device and a representative sampling of any other labeling for the device; if the registrant has determined that a particular device is not subject to sections 514 or 515 of the act or is not a restricted device, the Commissioner may request the submission of a brief statement of the basis upon which the registrant made such determination; the listing for all devices must be accompanied by a statement of the basis for believing that the product listed is a device and not a drug.

Section 510(j) of the act also provides for the updating of device listing information. Updating information must be submitted once during the month of June each year and once during the month of December each year. At that time, registrants must submit to FDA: a list of all devices introduced by the registrant for commercial distribution that have not been included in any list previously filed by him with FDA, a list of all devices for which the registrant has discontinued commercial distribution, a list of all devices for which the registrant has previously filed a notice of discontinuance with FDA and for which the registrant has resumed commercial distribution, and any material change in any information previously submitted pursuant to section 510(j) of the act. A new listing of a device or a notice of resumption of commercial distribution of a device must be accompanied by the appropriate labels, labeling, and advertisements for the device, as noted above.

## DEFINITIONS

The Commissioner is proposing to add to § 807.3 a new paragraph (i) that defines "restricted device" to mean a device for which the Commissioner, by regulation under § 801.109 (21 CFR 801.109) or otherwise under section 520(e) of the act (21 U.S.C. 360j(e)), has restricted to sale, distribution, or use only upon the written or oral authorization of a practitioner licensed by law to administer or use the device or upon such other conditions as the Commissioner may prescribe in the regulation. For devices in commercial distribution before enactment of the Medical Device Amendments of 1976, the definition includes all devices designated as prescription devices by § 801.109. A postenactment "restricted device" is a device so designated under section 520(e) of the act. For example, in the FEDERAL REGISTER of February 15,

1977 (42 FR 9386), FDA issued final regulations that placed conditions for sale and other restrictions on the distribution of hearing aids, thus making hearing aids restricted devices.

The Commissioner is also proposing to add to § 807.3 (21 CFR 807.3) a new paragraph (j) that defines "classification name" to mean the term used by the classification panels in the classification process under section 513 of the act (21 U.S.C. 360c) to describe a device of class of devices. The use of this term will facilitate the collection, organization, and retrieval of device listing information in that a list of "classification names" will be provided by FDA to persons required to submit such listing information.

The Commissioner is also proposing, for clarity, definitions for "representative sampling of advertisements" and "representative sampling of any other labeling" in proposed § 807.3 (k) and (l), respectively.

## WHO MUST LIST DEVICES

Any owner or operator of a device establishment required to register under Part 807 is also required to list all devices. The registration and listing requirements shall pertain to any person who:

1. Initiates or develops specifications for a device that is to be manufactured for him for subsequent commercial distribution by him.
2. Manufacturers for commercial distribution a device either for himself or for another person.
3. Repackages or relabels a device.
4. Initially distributes a device imported into the United States.
5. Manufacturers components or accessories that are ready to be used for any intended health-related purpose and are packaged or labeled for commercial distribution for such health-related purpose, e.g., blood filters, hemodialysis tubing, or devices which of necessity must be further processed by a licensed practitioner or other qualified persons to meet the needs of a particular patient, e.g., a manufacturer of ophthalmic lens blanks. Any owner or operator who is exempted from the registration requirements is also exempted from the listing requirements.

Proposed § 807.20 (21 CFR 807.20) has been amended to provide that listing information may be submitted by the parent, subsidiary and/or affiliate company for all establishments when operations are conducted at more than one establishment and there exists joint ownership and control among all the establishments. Listing information must be submitted whether or not the output of the establishment or any particular device so listed enters interstate commerce.

## TIMES FOR LISTING

The agency intends to implement device listing immediately, before the effective date of the final regulation based on this proposal. Section 510 of the act is self-executing, i.e., its effectiveness does not depend on promulgation of agency

regulations. Owners and operators of establishments that are required to register must comply with the device listing requirements by December 31, 1977, regardless of whether FDA has published final device listing regulations that prescribe the form and manner for preparation of the list, and thus aid owners and operators of device establishments in complying with the statute.

Device listing forms will be mailed to all official correspondents, as defined in the establishment registration regulations (21 CFR 807.3(e)) and will also be available from FDA upon request in accordance with the proposed regulation. Owners or operators required to submit device listing must submit the initial listing of all devices they have in commercial distribution within 90 days of receiving the device listing package from FDA, but no later than December 31, 1977. An extension of this deadline will be considered for those owners or operators who specify a need for an extension in writing to the Bureau of Medical Devices (HFK-124), Registration and Listing Section, Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910. Such requests must include the reason(s) for requesting an extension, the approximate number of forms to be submitted, and a date when the owner or operator will complete the listing requirement.

Owners or operators who have not previously entered into an operation requiring device listing must submit their device listing information within 30 days after entering into such an operation. Owners or operators may update their device listing information at any time, but are required to do so each June and December, in accordance with proposed § 807.30 (21 CFR 807.30).

## HOW AND WHERE TO SUBMIT LISTING

Form FD-2892 (Medical Device Listing) is the approved form for submitting device listing information. A supply of these forms will be mailed to all establishments registered with FDA. These forms may be obtained upon request from the Registration and Listing Section at the address set forth above or from FDA district offices.

Proposed § 807.22(b) (21 CFR 807.22(b)) provides that a separate Form FD-2892 must be submitted for each device or device class listed with FDA. Devices having variations in physical characteristics such as size, package, shape, color, or composition should be considered to be one device, provided the variation does not change the function or intended use of the device.

Proposed section 807.22(c) provides that the initial distributor of an imported device is not required to submit a Form FD-2892 for each such device. But he shall submit, for each device for which he is the initial distributor, the name and address of the foreign manufacturer. He must also be prepared to submit, when requested by FDA, the proprietary name, if any, and the common or usual name of each device for which he is the ini-

tial distributor. The foreign manufacturer is required by proposed § 807.40 to list his devices. The requirements of §§ 807.22(c) and 807.40 will provide FDA with a cross-check system to assure that foreign manufacturers comply with the device listing requirements.

## INFORMATION REQUIRED IN A DEVICE LISTING

Proposed § 807.25(f) (21 CFR 807.25(f)) describes the information required to be included on Form FD-2892.

Proposed § 807.25(f) (1) requires that devices be listed on Form FD-2892 by classification name, proprietary name, if any, and common or usual name. The agency will provide a list of classification names for devices when it sends official correspondents copies of Form FD-2892. This list, compiled by FDA advisory committees that are serving as device classification panels, will facilitate the collection, organization, and retrieval of the required device listing information, thereby simplifying the task of processing the large amount of listing information expected. Owners and operators will be able to list multiple variations of a device under one classification name, thus reducing the reporting burden for the owner or operator and the processing requirements for FDA. Use of classification names will also provide the basis for identifying manufacturers of class II and class III devices who are subject to mandatory biennial inspection under section 510(h) of the act and will identify devices that have not been classified.

Section 510(j) (1) (A) of the act requires that a device list include a reference to the authority for the marketing of a device for which a performance standard has been established under section 514 of the act or which is subject to section 515 of the act. Proposed § 807.25(f) (2) and (3) implement this provision.

Proposed § 807.25(f) (2) requires that when a device is subject to a performance standard under section 514 of the act or section 358 of the Public Health Service Act as amended by the Radiation Control for Health and Safety Act, the registrant must enter the Code of Federal Regulations citation for the applicable standard.

Proposed § 807.25(f) (3) requires that when a device is the subject of an approved premarket approval application pursuant to section 515 of the act, or an approved new drug application pursuant to section 505 of the act, or an approved antibiotic form 5 or 6 pursuant to section 507 of the act, the registrant shall enter its assigned FDA number.

Proposed § 807.25(f) (4) requires that the registrant enter the name and registration number of every establishment at which the listed device is manufactured, repackaged, or relabeled. The registration number is the seven digit number in block 12 of Form FD-2891 (Initial Registration of Device Establishment) assigned at the time of registration.

Proposed § 807.25(f) (5) requires that when the registrant is unable to find an appropriate classification name for his device on the list provided by FDA in

the device listing package, he must submit labeling adequate to describe the intended use of the device. FDA then will assign an appropriate classification name.

## UPDATING DEVICE LISTING

Proposed § 807.30(a) requires that Form FD-2892 be used for updating device listing information.

The FDA control of each Form FD-2892 will be based on the use of the original document number that is printed in block 1 on each Form FD-2892. This original document number shall appear in block 2 on any form subsequently used to update the listing information for the device and on any correspondence relating to the device.

Proposed § 807.30(b) requires the registrant to update his device listing information each June and December if any change has occurred in any information included on the Form FD-2892 since his last report. The registrant is encouraged, however, to report a change at the time it occurs.

The following changes require the submission of Form FD-2892 to update device listing information:

1. The introduction by the registrant into commercial distribution of a device if he does not currently have listed with FDA a device of the same classification name. A complete form must be submitted for such a device, even if the device had been the subject of a premarket notification submission.

2. The discontinuance of commercial distribution of a device if the registrant is discontinuing commercial distribution of all devices of the same classification name. The device shall be identified by the classification name, proprietary name, if any, the common or usual name, the original document number, and the date of discontinuance. It is requested, but not required, that the reason for discontinuance of distribution be included with this information.

3. The resumption of commercial distribution of a device that had been previously listed with FDA is discontinued. The device shall be identified by the classification name, proprietary name, and common or usual name of the device, the original document number, and the date of resumption.

4. Any material change in any information previously submitted.

Proposed § 807.30(c) provides that updating is not required in June and December if no change has occurred since the previous submission.

## ADDITIONAL INFORMATION

Section 510(j) of the act requires that the listing information filed with FDA also include labels, labeling and, in some cases, advertisements. A liberal interpretation of the act would lead to the submission of, and require the subsequent storage of, information that FDA may not have immediate need for and, unless constantly updated by the owner or operator, would be out of date when needed. To alleviate this problem, the Commissioner is proposing in § 807.31 (21 CFR 807.31) to require that the owner

or operator maintain a historical file of labels, labeling, and, for restricted devices, advertisements, and make all or part of that file available to FDA upon request. The Commissioner does not believe this imposes a major burden on industry because maintaining such information is consistent with good manufacturing practice.

Labels, labeling, and advertisements will be requested by letter. In certain cases in the instructions accompanying Form FD-2892, FDA requests that labels or labeling be submitted along with the device listing form.

Section 510(j)(1)(D) of the act provides that the Commissioner may request, for a particular device, a statement of the basis upon which the registrant has determined that the device is not subject to section 514 or 515 of the act. Section 807.31(b)(3) implements this provision.

Proposed § 807.31(b)(4) also requires that the owner or operator must provide, when requested by FDA, a statement of the basis for believing that the device listed is a device and not a drug. Section 510(j) of the act requires that such a statement be included in the listing information. The Commissioner believes that, in most cases, it will be obvious that the product is a device and not a drug and is therefore requiring that this statement only be submitted when requested.

Finally, proposed § 807.31(b)(5) provides that owners or operators who manufacture devices for distribution under labels other than their own must, upon request, furnish FDA with a list of these private label distributors for whom they manufacture devices. In the case of private label distributors, identical devices may be marketed under many different distributor labels without identifying the manufacturer. Private label distributors are exempted from registration and listing. The agency does not want the same device listed numerous times (by the manufacturer and by each distributor). But in certain situations, such as a device recall, it becomes necessary to know all private label distributors of a device. Proposed § 807.31(b)(5) would assure that FDA can obtain this information in these situations.

#### PUBLIC DISCLOSURE OF DEVICE LISTINGS

Under proposed § 807.37(b) (21 CFR 807.37(b)), the information submitted pursuant to these device listing procedures will generally be available for public disclosure. This includes all Forms FD-2892 submitted. It also includes all labels, labeling, and advertisements that have been submitted and all other data and information submitted that has become a matter of public knowledge.

#### PROCEDURES FOR FOREIGN ESTABLISHMENTS

Proposed § 807.40(b) requires that every foreign device establishment that exports devices into the United States shall comply with the device listing requirements whether or not the establishment is also registered, unless it falls within the exemptions from registration in § 807.65.

Proposed § 807.40(c) provides that a device may not be imported from a foreign device establishment into the United States, except a device imported or offered for import that has in effect an approved exemption for investigational use pursuant to FDA regulations under section 520(g) of the act unless it is first the subject of a device listing. The device listing information shall be in the English language. (FDA regulations under section 520(g) of the act were proposed in the FEDERAL REGISTER of August 20, 1976 (41 FR 35282).)

Proposed § 807.40(d) provides that foreign device establishments shall submit, as part of the device listing, the name and address of the establishment and the name of the individual responsible for submitting device listing information. Any changes in this information shall be reported to FDA at the intervals specified for updating device listing information.

#### NATIONAL HEALTH RELATED ITEMS CODE

The agency has supported the National Health Related Items Code (NHRIC) as a system for the identification and numbering of marketed device packages. The use of this number provides compatibility with other numbering systems such as the National Drug Code (NDC) and Universal Product Code (UPC). The support of this system in addition to device listing would require some duplication in reporting on the part of manufacturers and distributors and processing on the part of FDA.

The agency now plans to limit the support of the NHRIC system and no longer maintain the NHRIC data base. Those manufacturers and distributors who desire to use the NHRIC number for unique product identification may apply to FDA for a labeler code. This labeler code is the first segment in the two-segment NHRIC system. Participating manufacturers and distributors will then complete the code by identifying their devices with a sequential number. The manufacturer or distributor will then assume responsibility for maintaining this number.

Those manufacturers or distributors currently participating in the NHRIC system may continue to use the numbers assigned, but no longer should submit update information to FDA.

The agency proposes no requirement for placing the NHRIC number on device labels, but those manufacturers or distributors choosing to do so should display it prominently in the top third of the principal display panel.

When placed on device labels, the NHRIC number should be preceded by the letter H to distinguish it from NDC or UPC numbers. Manufacturers and distributors of in vitro diagnostic products previously assigned NDC numbers may retain those numbers, but are requested to change the prefix from N to H as label revisions occur.

Comments are requested from those manufacturers or distributors interested in such numbering systems.

#### ENVIRONMENTAL IMPACT

The Commissioner has determined that the proposed regulation is not covered by § 25.1(b) (21 CFR 25.1(b)) and, as a result, consideration by FDA of the need for preparing an environmental impact statement is not required.

Therefore, under the Federal Food, Drug and Cosmetic Act (secs. 301(p), and (q)(2), 501, 502, 508, 510, 519, 701 (a), 52 Stat. 1042-1043 as amended, 1049-1050 as amended, 1055, 90 Stat. 576-580 (21 U.S.C. 331(p) and (q)(2), 351, 352, 358, 360, 360i, 371(a))) and under authority delegated to the Commissioner 21 CFR 5.1) is proposed that Parts 207, 607, and 807 be amended as follows:

#### PART 207—REGISTRATION OF PRODUCERS OF DRUGS AND LISTING OF DRUGS IN COMMERCIAL DISTRIBUTION

1. In Part 207, by amending § 207.65 (i) by adding a sentence at the end of the paragraph, as follows:

§ 207.65 Exemptions for domestic establishments.

(i) . . . This paragraph does not exempt such persons from registration and listing for medical devices required under Part 807 of this chapter.

#### PART 607—ESTABLISHMENT REGISTRATION AND PRODUCT LISTING FOR MANUFACTURERS OF HUMAN BLOOD AND BLOOD PRODUCTS

2. In Part 607, by amending § 607.65 (e) by adding a sentence at the end of the paragraph, as follows:

§ 607.65 Exemptions for blood product establishments.

(e) . . . This paragraph does not exempt such persons from registration and listing for medical devices required under Part 807 of this chapter.

#### PART 807—ESTABLISHMENT REGISTRATION FOR MANUFACTURERS OF DEVICES

3. Part 807 is amended as follows:

a. In § 807.3, by adding new paragraphs (i), (j), (k), and (l) to read as follows:

§ 807.3 Definitions.

(i) "Restricted device" means a device for which the Commissioner, by regulation under § 801.109 of this chapter or otherwise under section 520(e) of the act, has restricted sale, distribution or use only upon the written or oral authorization of a practitioner licensed by law to administer or use the device or upon such other conditions as the Commissioner may prescribe.

(j) "Classification name" means the term used by the Food and Drug Administration and its classification panels to describe a device or class of devices for purposes of classifying devices under section 513 of the act.

(k) "Representative sampling of advertisements" means typical advertising material that gives a balanced picture of the promotional claims being used for the device.

(l) "Representative sampling of any other labeling" means typical labeling material (excluding labels and package inserts) that gives a balanced picture of the promotional claims being used for the device.

b. In § 807.20, by revising the section heading, introductory text of paragraph (a), and paragraph (b), to read as follows:

§ 807.20 Who must register and submit a device list.

(a) Any owner or operator of an establishment not exempt under section 510(g) of the act or Subpart D of this part who is engaged in the manufacture, preparation, propagation, compounding, assembly or processing of a device intended for human use is required to register and to submit a list of every device in commercial distribution (except that listing information may be submitted by the parent, subsidiary, or affiliate company for all the establishments under the control of one of these organizations when operations are conducted at more than one establishment and there exists joint ownership and control among all the establishments). The term device includes all in vitro diagnostic products and in vitro diagnostic biological products not subject to licensing under section 351 of the Public Health Service Act. Such owner or operator is required to register his name, places of business, and all such establishments and to list such devices whether or not the output of such establishments or any particular device so listed enters interstate commerce. The registration and listing requirements shall pertain to any person who:

(b) No registration or listing fee is required. Registration or listing does not constitute an admission or agreement or determination that a product is a "device" within the meaning of section 201(h) of the act.

c. By revising § 807.21, to read as follows:

§ 807.21 Times for establishment registration and device listing.

The owner or operator of an establishment entering into, or currently engaged in, an operation defined in § 807.3(c) and not currently registered shall register the establishment by October 22, 1977. The owner or operator of an establishment who has not previously entered into an operation defined in § 807.3(c) shall register within 30 days after entering into such an operation and submit device listing information at that time. Owners or operators of all establishments shall update their registration information annually between November 15 and December 31 and shall update their device listing information every June and December.

d. By revising § 807.22, to read as follows:

§ 807.22 How and where to register establishments and list devices.

(a) The first registration of a device establishment shall be on Form FD-2891 (Initial Registration of Device Establishment). Forms are obtainable on request from the Bureau of Medical Devices (HFK-124), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, Md. 20910, or from the Food and Drug Administration district offices. Subsequent annual registration shall be accomplished on Form FD-2891(a) (Registration of Device Establishment), which will be furnished by the Food and Drug Administration before November 15 of each year to establishments whose registration for that year was validated pursuant to § 807.35(a). The completed form shall be mailed to the above-designated address before December 31 of that year.

(b) The initial listing of devices and subsequent June and December updates shall be on Form FD-2892 (Medical Device Listing). Forms are obtainable upon request as described in paragraph (a) of this section. A separate Form FD-2892 shall be submitted for each device or device class listed with the Food and Drug Administration. Devices having variations in physical characteristics such as size, package, shape, color, or composition should be considered to be one device, provided the variation does not change the function or intended use of the device. In lieu of Form FD-2892, tapes for computer input may be submitted if equivalent in all elements of information as specified in Form FD-2892. All formats proposed for use in lieu of Form FD-2892 require initial review and approval by the Food and Drug Administration.

(c) The initial distributor within the United States of an imported device is not required to submit a Form FD-2892 for each such device. However, he shall submit, for each device for which he is the initial distributor, the name and address of the foreign manufacturer. The initial distributor shall also be prepared to submit, when requested by the Food and Drug Administration, the proprietary name, if any, and the common or usual name of each device for which he is the initial distributor. The initial distributor shall update the information required by this paragraph at the intervals specified in § 807.30.

e. In § 807.25, by revising the section heading and by adding new paragraph (f), to read as follows:

§ 807.25 Information required or requested for establishment registration and device listing.

(f) Form FD-2892 is the approved form for providing the device listing information required by the act. This required information includes the following:

(1) The identification by classification name, proprietary name, and common or

usual name of each device that is being manufactured, prepared, propagated, compounded or processed for commercial distribution that has not been included in any list of devices previously submitted on Form FD-2892.

(2) The Code of Federal Regulations citation for any applicable standard for the device under section 514 of the act or section 358 of the Public Health Service Act, as amended by the Radiation Control for Health and Safety Act.

(3) The assigned Food and Drug Administration number of the approved application for each device listed that is subject to section 505, 507, or 515 of the act.

(4) The name and registration number of every device establishment at which the device is manufactured, repackaged, or relabeled.

(5) Labeling adequate to describe the intended use of a device when the owner or operator is unable to find an appropriate classification name for his device on the list provided by the Food and Drug Administration in the device listing package.

f. By adding new § 807.30, to read as follows:

§ 807.30 Updating device listing information.

(a) Form FD-2892 shall be used to update device listing information. The original document number preprinted on each Form FD-2892 shall appear in block 2 on the form subsequently used to update the listing information for the device and on any correspondence related to the device.

(b) The owner or operator shall update his device listing information during each June and December or, at his discretion, at the time the change occurs. The following information shall be submitted:

(1) All the information required by § 807.25(f) for each device that the owner or operator has introduced into commercial distribution, if the owner or operator does not currently have listed a device with the same classification name.

(2) The identification by classification name, proprietary name, and common or usual name of each device previously listed pursuant to § 807.25(f) for which commercial distribution has been discontinued, the original document number, and the date of discontinuance. No report is required unless the manufacturer has discontinued commercial distribution of all devices with the same classification name. It is requested but not required that the reason(s) for discontinuance of distribution be included with this information.

(3) The identification by classification name, proprietary name, and common or usual name of each device for which a notice of discontinuance was submitted pursuant to paragraph (b)(2) of this section and for which commercial distribution has been resumed; the date of resumption; the original document number which appears in block 1 of Form

FD-2892; and any other information required by § 807.25(f) not previously submitted.

(4) Any material change in any information previously submitted.

(c) Updating is not required if no change has occurred since the previously submitted list.

g. By adding new § 807.31, to read as follows:

§ 807.31 Additional listing information.

(a) Each owner or operator shall maintain a historical file containing all labels and labeling for every device and advertisements for each restricted device.

(b) Each owner or operator shall be prepared to submit to the Food and Drug Administration the information listed below. This information shall be submitted to the Food and Drug Administration only upon specific request:

(1) For a device that is a restricted device, a copy of all labeling for the device, a representative sampling of advertisements for the device, and, for good cause, a copy of all advertisements for a particular device.

(2) For a device that is not a restricted device, the label and package insert for the device and a representative sampling of any other labeling for the device.

(3) For a particular device, upon request by the Commissioner, a statement of the basis upon which the registrant has determined that the device is not subject to section 514 or 515 of the act.

(4) For a particular device, a statement of the basis for believing that the product is a device rather than a drug.

(5) For a device that the owner or operator has manufactured for distribution under a label other than his own, the names of all distributors for whom it has been manufactured.

h. In § 807.35, by revising paragraph (c) to read as follows:

§ 807.35 Notification of registrant.

(c) Although establishment registration and device listing are required to engage in the device activities described in § 807.20, validation of registration and the assignment of a device listing number in itself does not establish that the

holder of the registration is legally qualified to deal in such devices and does not represent a determination by the Food and Drug Administration as to the status of any device.

i. By revising § 807.37, to read as follows:

§ 807.37 Inspection of establishment registrations and product listings.

(a) A copy of the Form FD-2891 and FD-2891(a) filed by the registrant will be available for inspection pursuant to section 510(f) of the act, at the Bureau of Medical Devices (HFK-124), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, Md. 20910. In addition, there will be available for inspection at each of the Food and Drug Administration district offices the same information for firms within the geographical area of such district office. Upon request and receipt of a self-addressed stamped envelope, verification of registration number or location of a registered establishment will be provided.

(b) (1) The following information filed pursuant to the device listing requirements will be available for public disclosure:

- (i) Each Form FD-2892 submitted
- (ii) All labels submitted.
- (iii) All labeling submitted.
- (iv) All advertising submitted.
- (v) All data or information that has already become a matter of public knowledge.

(2) Requests for device listing information identified in paragraph (b) (1) of this section should be directed to the Bureau of Medical Devices (HFK-124), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, Md. 20910.

(3) Requests for device listing information not identified in paragraph (b) (1) of this section shall be submitted and handled in accordance with Part 20 of this chapter.

j. By revising § 807.40, to read as follows:

§ 807.40 Establishment registration and product listing for foreign manufacturers of devices.

(a) Foreign device establishments that export devices into the United

States are requested to register in accordance with the procedures of Subpart B of this part, unless exempt under Subpart D of this part.

(b) Foreign device establishments that export devices into the United States, whether or not the establishment is registered, shall comply with the device listing requirements unless exempt from registration as stated in § 807.65.

(c) A device may not be imported from a foreign device establishment into the United States, except a device imported or offered for import that has in effect an approved exemption for investigational use pursuant to section 520(g) of the act, unless it is first the subject of a device listing. The device listing information shall be in the English language.

(d) Foreign device establishments shall submit, as part of the device listing, the name and address of the establishment and the name of the individual responsible for submitting device listing information. Any changes in this information shall be reported to the Food and Drug Administration at the intervals specified for updating device listing information in § 807.30(a).

Interested persons may, on or before November 21, 1977 submit to the Hearing Clerk (HFC-20), Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

The Food and Drug Administration has determined that this document does not contain a major proposal requiring preparation of an inflation impact statement under Executive Order 11821 and OMB Circular A-107. A copy of the inflation impact assessment is on file with the Hearing Clerk, Food and Drug Administration.

Dated: September 22, 1977.

WILLIAM F. RANDOLPH,  
Acting Associate  
Commissioner for Compliance.

## Title 21—Food and Drugs

## CHAPTER I—FOOD AND DRUG ADMINISTRATION, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

[Docket No. 77N-0166]

## SUBCHAPTER B—FOOD FOR HUMAN CONSUMPTION

## SUBCHAPTER E—ANIMAL DRUGS, FEEDS, AND RELATED PRODUCTS

## POISONOUS OR DELETERIOUS SUBSTANCES

AGENCY: Food and Drug Administration.

ACTION: Final Rule.

**SUMMARY:** This rule establishes procedures for regulating food contaminants and naturally occurring poisonous or deleterious substances in food. This action is being taken to implement those provisions of the Federal Food, Drug, and Cosmetic Act that permit the Commissioner of Food and Drugs to set tolerances and action levels to control the levels of unavoidable contaminants in food. These procedures, which also permit the identification and listing of naturally occurring poisonous or deleterious substances in food, apply to all poisonous or deleterious substances in food, including food contact surfaces, pet food, and animal feed.

EFFECTIVE DATE: October 31, 1977.

FOR FURTHER INFORMATION CONTACT:

Caesar A. Roy, Bureau of Foods (HFF-310), Food and Drug Administration, Department of Health, Education, and Welfare, 200 C St. SW., Washington, D.C. 20204 (202-245-1567).

**SUPPLEMENTARY INFORMATION:** These regulations were proposed in the FEDERAL REGISTER of December 6, 1974 (39 FR 42746). Several comments were received in support of the proposed regulations; others supported the general approach but opposed specific provisions. The Commissioner's responses to most of the comments received are set forth below.

However, comments that concerned proposed § 122.7(c) of the regulations, which would codify the agency's prohibition against "blending" a food containing a poisonous or deleterious substance above the permitted tolerance with less contaminated food, have not yet been fully evaluated. The issue of "blending" remains under study within FDA, and the prohibition will not be codified at this time. Until the issue is resolved, the agency's long-standing prohibition against "blending" remains in effect.

When these regulations were proposed, regulations codified in 21 CFR Parts 121 and 122 (now Parts 109 and 170-189, recodification was published in the FEDERAL REGISTER of March 15, 1977 (42 FR 14302)) applied to food for human use as well as pet food and animal feed. Subsequently, regulations covering pet food and animal feed were recodified separately from the regulations covering

human food. The pet food and animal feed regulations are now codified in 21 CFR Parts 509 and 570 (recodification from Parts 121 and 122 was published in the FEDERAL REGISTER of September 10, 1976 (41 FR 38618)). This document, therefore, establishes identical regulations in Parts 109 (food for human consumption) and 509 (pet food and animal feed). The changes in 21 CFR Part 181 were incorporated into Subchapter E for pet food and animal feed under 21 CFR 570.13.

1. Comments stated that FDA should never permit the sale of contaminated food.

The Commissioner advises that it is not possible to produce food or food ingredients that are entirely free from contamination by foreign substances or impurities. This is not a modern phenomenon. Wholesome foods have inevitably been the carriers of levels of contamination beyond the capability of contemporary processing methods to eliminate and sometimes even detect. At best, therefore, specifications for "food grade" substances can be established, as has been done in the Food Chemicals Codex, to ensure that only minimal levels of contaminating substances are present. Where more significant levels of contamination occur unavoidably, action levels or tolerances may be established under Part 109 (formerly Part 122), of the regulations to ensure the safety of the food.

2. One comment suggested that the label of a contaminated food bear the warning "hazardous to health."

The Commissioner advises that tolerances and action levels will be established at levels intended to ensure that food marketed is not hazardous to health. The suggested warning would therefore be unnecessary and inappropriate. If any food is found to be hazardous to health, FDA will not permit it to be distributed in interstate commerce.

3. A number of comments argued that the distinction in the act between "added" and naturally occurring poisonous or deleterious substances is a distinction between substances introduced into the food chain through the agency of man and those introduced through the force of nature.

The Commissioner concludes that there is no basis for basing a distinction between "added" and naturally occurring contaminants on the presence or absence of human intervention. If that distinction were to be adopted as the proper interpretation of the statute, it would be necessary to ascertain the precise means by which a contaminant was introduced into the environment, often in historic time, before taking regulatory action. It makes little sense to argue that a contaminant that was introduced into the environment by man generations ago should be regarded differently from contamination caused, for example, by geological phenomena, such as contamination of water by mercury. There would be regulatory problems in trying to ascertain the role human activity played in introducing a contaminant. For

example, in the case of contamination occurring through mercury leaching into water from geological sources, it would presumably be necessary to determine whether man's activities exposed more geological surfaces to the waters than would naturally have been exposed. Such an expensive and protracted inquiry would provide no additional information upon which to determine the level of contamination that can be safely tolerated. Moreover, there is nothing in the statute that suggests that the definition of an "added" poisonous or deleterious substance is related to human involvement.

4. One comment contended that the language "any poisonous or deleterious substance added to any food" in section 406 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 346) contemplates addition through the agency of man since the term "added" is "used as an active verb."

The Commissioner notes that the comment discussed only the initial portion of section 406 of the act. The section goes on to identify two circumstances in which "added" poisonous or deleterious substances may be permitted: (1) Where the substance is "required in the production" of a food, and (2) or where the substance "cannot be avoided by good manufacturing practice." Although the language of the first circumstance connotes human action, the language of the second does not.

5. One comment stated that the legislative history of the act demonstrated that the term "added" poisonous or deleterious substances referred to substances that became a component of food through the agency of man. In support of this contention, the comment quoted from the testimony of Walter Campbell, then Chief of the Food and Drug Administration, who was concerned with contamination resulting from the "development of the country and the extension of industrial activities." The comment also emphasized Mr. Campbell's examples of smoke contaminating sugar with arsenic and pesticides spray residues in support of its argument that the concept of "added" poisonous or deleterious substances was limited to food contaminants introduced into the environment by man. The comment also cited a 1934 Senate committee report that stated that the amended statute covered all contaminants "whether that constituent is added by man or put there by nature." In addition, the comment emphasized language in the report that stated "it is immaterial to the welfare of the consumer whether a poison in his food is introduced by artifice or occurs naturally." The comment argued that this testimony and committee report support the conclusion that the term "added" poisonous or deleterious substance pertains only to those substances for which human activity is responsible.

The Commissioner concludes that the legislative history cited in the comment does not support the contention that "added" poisonous or deleterious substances are only those that become a

component of food through the agency of man. Industrial development was seen as leading to the appearance of additional contaminants, but there is nothing in the legislative history to suggest that the often remote human connection with food contaminants was to be the basis for permitting tolerances to be established. It is implausible that Congress would have intended that, before establishing a tolerance, an inquiry into the source of a contaminant be made to determine whether human activity, perhaps generations earlier, may have set in motion events leading to the contamination.

The cited language in the committee report focused on the fact that naturally occurring poisons were being covered by the statute for the first time. Consequently, the casual reference to substances "added by man" is of limited significance, as it refers to an unchanged provision of the statute. Moreover, the reference to "added" substances as being those "introduced by artifice" connotes a concept different from contamination as a result of human activity.

6. One comment asserted that the few judicial decisions that have interpreted the statutory words "added" and "not . . . added" in the act do not support the definition established in the regulation. The comment claimed that "United States v. 1200 Cans, Pasteurized Whole Eggs," 393 F. Supp. 131 (N.D. Ga. 1972), was of limited precedential value because of parties stipulated that *Salmonella* in frozen eggs is an added poisonous or deleterious substance. Moreover, the comment argued, *Salmonella* is not, like trace elements of natural origin in living organisms, a natural constituent of the host food, possessing potentially nutritional or other valuable properties at low levels and toxic properties at higher levels. The comment asserted that the case "United States v. 1,600,800 Pounds of White Corn," Civil No. T-4173 (D. Kan., Dec. 18, 1970), was distinguishable because the court found that there is no minimum or base line level of aflatoxin commonly found in foods. The comment argued that the Commissioner has ignored "United States v. 1232 Cases of American Beauty Brand Oysters," 43 F. Supp. 744 (W.D. Mo. 1942), which squarely held that shell fragments in cans of oysters are not "added" substances under section 402(a)(1) of the act (21 U.S.C. 342(a)(1)).

The Commissioner advises that since publication of the proposed regulation, another court has interpreted the meaning of the term "added," a decision that supports the Commissioner's position. In the "United States v. An Article of Food Consisting of Cartons of Swordfish," 395 F. Supp. 1184 (S.D. N.Y., 1975), the court stated:

The government also contends that mercury in swordfish is an added substance within the meaning of 21 U.S.C. § 342(a)(1) . . . . According to the government, the test for determining whether a substance is added is whether it occurs naturally in the food . . . . We agree with the government's position on the point. We find unpersuasive claimant's argument that mercury could not

be an added substance because it has been found in fish for centuries. Assuming this to be so, it adds nothing to the question of whether mercury is naturally produced by fish and thus whether it is an added substance within the meaning of the statute.

That *Salmonella* is entirely foreign to frozen eggs and aflatoxin entirely foreign to white corn do not diminish the precedential value of the decisions cited with respect to contaminants identical to naturally occurring components of an organism. It is wholly consistent with the principle of the decisions that any amount of a substance above that naturally occurring is "added" within the meaning of the act. This is the interpretation codified in proposed § 122.3(d), now § 109.3(d).

The Commissioner also believes that the case "United States v. 1232 Cases of American Beauty Brand Oysters" supports the regulations. The court in that case held that shell fragments were not "added" within the meaning of the act because they were, like fish bones, inherent in the food. The case supports the thrust of § 109.3(d) which is that the test of whether a substance is "added" is whether it is intrinsically part of the food.

7. One comment stated that living organisms contain a variety of naturally occurring trace elements whose precise biological role is unknown but whose presence at low levels may be essential. The comment contended that the definitions in the proposed regulation would expand the class of "added" poisonous or deleterious substances to encompass trace elements, such as heavy metals, absorbed by animal organisms from their natural environment.

The Commissioner advises that the distinction drawn in the act, and in the regulations, between "added" and naturally occurring poisonous or deleterious substances is between substances that are inherent and those that are not. If a trace element, such as a heavy metal, is essential to the biological function of an animal, then it is inherent to that animal and it is not to be regulated as an "added" substance, unless it has been increased above the natural level by environmental contamination. If a substance is absorbed from a contaminated environment, in greater than normal amounts, it is not appropriate to regard it as naturally occurring, but to regard it as a contaminant and to take any appropriate action necessary to protect the public health. Contrary to the comment, which argues that this distinction is illogical, the Commissioner finds irrational the belief that the act of biological absorption somehow renders a contaminant "natural." Nothing in the act, or in sound science, suggests that a contaminating substance should be treated specially because it is absorbed by a living organism, or because an organism naturally contains a trace amount of the same substance. The Commissioner's position was implicitly approved in the instance of fish absorbing DDT from the water by the court in "United States v. Ewig Bros. Co.," 502 F.2d 715 (7th Cir. 1974).

8. Comments stated that numerous scientific studies have demonstrated that the level of mercury in ocean fish has remained historically constant and that mercury in marine fish is not primarily a result of manmade pollution but is of natural origin. The comment cited studies indicating that the mercury content of 90-year-old fish, museum specimens of fish caught between 25 and 93 years ago, and various prehistoric fish are of the same order of magnitude as the mercury content of living fish of the same species. The comments argued that since the level of mercury content of the fish has not changed over time, it should not be regarded as an "added" substance but rather as naturally occurring.

The Commissioner believes that the act does not contemplate treating a contaminant differently because it has persisted in the environment for a long time. If the comment's interpretation were correct, the validity of a tolerance for a persistent contaminant would eventually be placed in doubt on the ground that the passage of time has transformed the substance from "added" to naturally occurring even though the levels occurring pose the same risks to human health. Nothing in the act supports such a result. Moreover, the comment's position was specifically considered and rejected by the court in "United States v. An Article of Food Consisting of Cartons of Swordfish," discussed above.

9. One comment questioned whether, if a very substantial portion of a commodity contains, despite all efforts, some level of a mycotoxin, that mycotoxin is an "added" substance. The comment noted that "added" was defined in the regulations as encompassing all ingredients that are not inherent parts of a food, and stated that, under the conditions identified, it would seem that mycotoxins are not necessarily "added" substances. The comment stated that certain manmade substances such as pesticides have become a component of the environment and, like certain natural substances such as mycotoxins widely occurring in nature, would not seem always to be "added" substances within the meaning of the act.

This comment points up the problem of looking only to the current state of the environment to determine whether a substance in food is "added." Certain pesticides have become ubiquitous environmental contaminants and are found in nearly all food. Nevertheless, it is clear that such pesticides are not intrinsic parts of food and should not be regarded as such. The act does not contemplate that serious contamination should be subject to lesser controls than minor contamination, which would be the result if ubiquitous contaminants were "natural" while other, less universal contaminants were regarded as "added." The Commissioner therefore concludes that under the act the test for determining whether a substance is "added" or natural is whether it is necessarily an inherent part of the food, in which case

It is natural. Otherwise it is "added" under the law. Thus, in the example of mycotoxins suggested by comment, the inquiry is not whether all lots of the commodity contain mycotoxin contamination, but whether the mycotoxin is inherently part of the food. This approach will permit adequate control over contaminants, from whatever source, and is the approach contemplated by section 406 of the act.

10. One comment requested clarification of FDA's policy concerning "environmental contamination." The comment gave as an example that corn grown in South Dakota averaged 0.40 part per million (ppm) selenium, while corn grown in Indiana averages 0.04 ppm selenium. The comment stated that these differences are presumably due to differences in selenium content of the soil. The comment questioned whether the differences between 0.04 and 0.40 ppm is "added" selenium. The comment interpreted the regulations, in referring to environmental contamination, as treating increased levels of substances to be "added" only when the increase is caused by man.

The Commissioner does not agree with the comment's interpretation. A substance is "added" within the meaning of the statute when it is increased to abnormal levels through intervening circumstances; these need not involve human intervention, but could involve merely the kinds of geological processes that raise the concentration of a toxic trace element to unusually high concentration in a particular locality. If food may pose a risk to health because of the abnormally high mineral content of the soil in which it is grown, it is appropriate under the act that the Commissioner take action to protect the public health. To repeat, contamination of concern is in no way limited to that which can be attributed to man.

11. One comment stated that the reason we have poisons in our food is due mainly to governmental agencies that allow pesticides to enter the food chain. The comment stated that if farmers knew that the contaminated foods could not be marketed, they would use more natural methods to prevent crop destruction.

The Commissioner advises that the use of pesticides is regulated by the U.S. Environmental Protection Agency (EPA), which establishes conditions for their safe use and tolerance levels for residues resulting from such use. Nothing in these regulations would permit the sale of food that was contaminated beyond the established tolerance or action level or was contaminated through unlawful use of a pesticide or any other added substance except in the rare instance in which such contamination is of such magnitude that destruction of the food would constitute a substantial adverse impact on the national food supply and then only if the food itself is safe for consumption.

12. One comment requested clarification of the meaning of a "poisonous or deleterious substance." The comment

stated that a substance may be beneficial or even essential at one level, and yet poisonous or deleterious at a higher level.

The language "poisonous or deleterious substance" appears in section 402(a)(2) of the act (21 U.S.C. 342(a)(2)), and it is not further defined. The Commissioner concludes that clarification of the term is not necessary for purposes of these regulations. The issue in an administrative proceeding to establish a tolerance or action level is the level necessary to protect the public health. Accordingly, it is unnecessary to specify in the abstract what constitutes a "poisonous or deleterious substance."

13. One comment stated that proposed § 122.6(b)(2) (now § 109.6(b)(2)), which provides that a tolerance will be established at a level "sufficient for the protection of the public health," fails to define what constitutes "sufficient" in terms of a margin of safety. The comment stated that if FDA plans to allow such margins, the regulations should so specify with particularity.

The Commissioner advises that it is not possible to specify in advance the margin of safety that will be used for any given contaminant. Particularly in the case of action levels, available data on safety may be so limited that it will be unclear what margin of safety is being provided. Nevertheless, it may be appropriate to establish an action level based on the little data that are available. Also, as was the case, for example, in the proposed action level for mercury in fish and shellfish (December 6, 1974, 39 FR 42738), the margin of safety may vary greatly depending upon how much of the food a particular individual consumes. So far as possible, a proposal to establish a tolerance and the supporting material on file with the Hearing Clerk in the case of an action level will provide information from which it may be concluded what margin of safety is being established. Comments could then address the question whether the margin is sufficient under the circumstances.

14. One comment questioned the language of proposed § 122.4(b) (now § 109.4(b)(1)) which states that an action level "may prohibit any detectable amount of the substance in food." The comment was concerned that nothing more was said about methodology in the regulations. The comment questioned whether the existence of an action level would be dependent upon a specifically approved method of detection.

The Commissioner advises that in establishing an action level or tolerance he will specify the method of detection that is to be used to ensure compliance with the tolerance or action level.

15. One comment referred to the language in proposed § 122.4(a) (now § 109.4(a)) that a tolerance may be established at the level of zero. The comment stated that "zero" depends upon the sensitivity of the method, and suggested that it would be more accurate to state that a tolerance may be established at "no detectable amount of the substance in the food."

The Commissioner agrees with the comment and has revised the regulation accordingly. The Commissioner advises that when a tolerance is established at the level of zero, a method of analysis will always be specified in the regulation establishing the tolerance.

16. One comment opposed proposed § 122.7(a) (now § 109.7(a)), which states that tolerances and action levels will be established at levels "based on the unavailability of the poisonous or deleterious substance concerned." The comment asserted that section 406 of the act does not permit establishing a tolerance based on a substance's degree of unavailability, but must be confined to toxicological aspects. The comment asserted that a potentially offending substance need not be eliminated from a class of foods where it is present at completely safe levels simply because it can be eliminated. The comment asserted that FDA has a duty to permit theoretically avoidable but nevertheless safe levels of poisonous or deleterious substances.

The Commissioner advises that the standard of unavailability established by section 406 of the act is whether the substance can be avoided by good manufacturing practice. If a substance can be avoided by good manufacturing practice, it is deemed by section 402(a)(2)(A) of the act to be unlawful at any level. If a substance cannot be avoided, the Commissioner is expressly directed by section 406 of the act to "take into account the extent to which the use of such substance . . . cannot be avoided" in the production of food. Therefore, the agency must consider the degree of unavailability of a substance and not simply toxicological aspects.

17. Comments contended that the section on unavailability (§ 122.7, now § 109.7) does not adequately define the term. The comments stated that adulteration is not unavoidable simply because all purveyors of a food product produce a similarly adulterated item. They stated that customary practice of the industry is not the measure of duty or due care, and that FDA should make clear in this section that objective capability, and not industry practice, defines unavailability.

As noted above, the act defines an unavoidable substance as one that cannot be avoided by good manufacturing practice. The Commissioner agrees that an industry's customary practice does not necessarily constitute good manufacturing practice. Section 122.7 (now § 109.7) states that the manufacturer of food must at all times utilize quality control procedures which will reduce contamination to the lowest level currently feasible. However, the specific criteria for determining good manufacturing practice will vary. An attempt to define particular circumstances in which an industry's practice does not constitute good manufacturing practice would be beyond the scope of these regulations.

18. Comments objected to the definition of "food" in proposed § 122.3(e) (now § 109.3(e)) because it is different from the definition of "food" in section

201(f) of the act. One comment asserted that indirect food additives, that is, substances migrating to food from food-contact articles, are not foods within the meaning of the definition of section 201(f).

The Commissioner advises that all food additives are "foods" under the law. Moreover, all substances migrating from food-contact surfaces are "foods" within the meaning of the act. This position has been upheld by the courts in *United States v. Articles of Food*, 370 F. Supp. 371 (E.D. Mich. 1974), and in *Natick Paperboard Corp. v. Weinberger*, 389 F. Supp. 794 (D. Mass. 1975), aff'd, 525 F.2d 1103 (1st Cir. 1975). Thus, the regulation simply clarifies the scope of the act for the benefit of the public and regulated industry. Under Part 109 a tolerance or action level may be established for an unavoidable contaminant of a packaging material or other food-contact article. For example, the existing (stayed) tolerance for polychlorinated biphenyls establishes a tolerance for their presence in paper packaging materials (21 CFR 109.30(a)(9)), formerly 21 CFR 122.10(a)(9)).

19. One comment suggested that there should be different definitions for "food" and "feed" because in many instances the poisonous or deleterious substance in question should be treated differently depending on whether it is intended for human or animal consumption.

The Commissioner agrees that different tolerances or action levels may be established for human and animal food. These differences will be reflected in the individual tolerances or action levels established, where appropriate. Changing the definition of "food" would not facilitate this approach, however, nor is it necessary to its implementation.

20. One comment stated that it is unrealistic to establish tolerances or action levels for contaminants that are equally applicable to human food and animal feeds. The comment stated that animal feeds and human food should be considered separately throughout the regulations.

As noted, the Commissioner agrees that it will often be appropriate to establish different tolerances or action levels for human food and animal feeds.

21. The proposed regulations provided for the establishment of action levels through informal (i.e., notice and comment) rule making. The Commissioner has reconsidered this aspect of the proposal, and for the reasons discussed below, concludes that an alternative procedure is preferable. The approach adopted will conserve limited FDA resources while preserving the opportunity for the public to comment upon any action level set and the scientific bases for the decision.

In the preamble to the proposal, the Commissioner stated that action levels, as opposed to tolerances under section 406 of the act, are appropriate in dynamic circumstances. Thus, an action level is appropriate if industrial practices are improving so quickly that the extent to which a substance is avoidable changes

significantly from year to year, or if toxicological data are scanty or conflicting but additional data are being developed. The procedures required by section 406 of the act, including a public hearing and the requirement of substantial evidence to support a tolerance, contemplate ample evidence, and a relatively stable situation, in which any tolerance promulgated will be appropriate for a relatively long period of time.

There is an inherent conflict between the dynamic circumstances in which an action level is appropriate and the use of rule making to set such a level. Although the time required to set an action level through informal rule making is less than that required for a tolerance under section 406 of the act, establishment of action levels through informal rule making would still involve a substantial amount of time and agency resources. Because of the time required to promulgate an action level and the dynamic circumstances in which action levels are used, the possibility exists that an action level will be outdated soon after it is promulgated, in which case the process would have to begin anew. The potential for wasteful expenditure of agency resources has persuaded the Commissioner that a simplified procedure for adopting action levels should be used.

In so concluding, however, the Commissioner is mindful of the need to provide for public access to, and review of, the data on which FDA relies in setting an action level and for an opportunity to comment upon the level set. The bases and rationale for action levels cannot be shielded from the public if the agency's decisions are to be credible. In evaluating various alternative procedures for setting action levels, the Commissioner has given great weight to the extent to which specific alternatives would satisfy this need.

The Commissioner recognizes that the approach described below and adopted in § 109.4(b)(2) of the regulations may prove not wholly satisfactory. The Commissioner is committed to reviewing the procedure periodically and to proposing revisions if they appear to be appropriate.

Under § 109.4(b) of the regulations, when the agency sets an action level for a specific poisonous and deleterious substance, a notice will be published in the *FEDERAL REGISTER* announcing that fact. Before the notice is published, the FDA will place on file with the Hearing Clerk all pertinent data and information regarding the substance, including FDA memoranda analyzing those data and discussing the rationale for the level that has been chosen. The notice will explicitly call attention to the material placed on file with the Hearing Clerk. Additionally, the notice will invite and specify a time for public comments on the level. FDA will review any comments received and, as part of the continuing process of reviewing action levels, modify any level if the comments warrant that action. Any interested person may petition the FDA to set a different action level

under the procedures set forth in 21 CFR Part 10 (Subpart A of Part 2, prior to recodification published in the *FEDERAL REGISTER* of March 22, 1977 (42 FR 15553)).

On occasion it may be necessary to set an action level to respond to any "emergency" situation. In such a case, a memorandum will be placed on file with the Hearing Clerk stating that an action level has been set. As soon as possible thereafter, a notice will be published in the *FEDERAL REGISTER* to the same effect.

Because of the dynamic circumstances in which action levels are used, it will frequently be necessary to revise a particular action level before a notice can be published in the *FEDERAL REGISTER*. A notice will be published as soon as possible whenever an action level is changed. The Commissioner anticipates that a notice will be published in the near future setting forth all existing action levels for poisonous and deleterious substances.

22. One comment questioned whether there is any authority or justification for section 406 tolerances for food additives that may be regulated under section 409 of the act. The comment asserted that food additives are entirely avoidable, as distinguished from the unavoidable contaminants with which section 406 of the act deals.

The Commissioner agrees in part with the comment. Tolerances under section 406 of the act (and action levels) should not be established in Part 109 for intentionally added food ingredients or for components of food-contact articles that serve a functional purpose in the food-contact article. Tolerances under section 406 of the act and action levels may be established only for contaminants of food or food-contact articles, such as the tolerances established for polychlorinated biphenyls unavoidably present in several classes of food and in paper-packaging materials (21 CFR 122.100, now 21 CFR 109.30). Such contaminants may include substances that are "food additives" within the meaning of the act if the substances are unavoidable in a particular food; this conclusion was fully discussed in the preamble to the proposed regulations.

The Food and Drug Administration may have occasion to establish an action level for an intentionally used food ingredient or for a functional component of a food-contact article. If questions arise about the safety of a substance that has long been used in food on the assumption that the substance was generally recognized as safe, it might be appropriate to issue an interim food additive regulation under § 180.1 (21 CFR 180.1) (formerly 21 CFR 121.4000) to permit the continued safe use of the substance while the questions are being resolved. However, it might also be appropriate to restrict use of the substance while the interim food additive regulation is being made final. In such a case an action level would be announced to establish the level at which FDA would take action against the substance under section 402(a)(2)(C) of the Act. An in-

terim food additive regulation would be proposed as soon thereafter as practicable. The Commissioner has added a new paragraph (f) to § 180.1 to set forth the conditions under which such an action level may be considered. A similar paragraph has been added to § 181.1 (21 CFR 181.1) (formerly 21 CFR 121.2000) to identify the conditions under which an action level may be established for a prior-sanctioned substance. No action level would be established for an approved food additive, however; the procedure for changing the permitted conditions of use of an approved food additive is that prescribed in section 409 of the act.

The first action levels established for functional components of food-contact articles are to control lead and cadmium migration from pottery and enamelware, lead migration from silver-plated hollowware, and lead migration from cans containing evaporated milk and skim milk to their contents. These action levels currently exist and will continue to be used.

23. Comments recommended that the circumstances described in § 122.8 (now § 109.8) under which an unlawfully contaminated food could be permitted to be marketed should not be as stringent as those circumstances in which there would be a "substantial adverse impact on the national food supply." The comments argued that it is inconceivable that destruction of a single contaminated product could ever have such an impact and suggested that an exception be permitted whenever destruction of the food involved "would cause a needless waste of food and thus an unwarranted economic loss to the consuming public." Another comment suggested that the criterion should be whether the destruction or diversion of the food involved would "contribute to an adverse impact on the national food or feed supply."

The Commissioner concludes that it is not appropriate to sanction the essentially routine marketing of unlawfully contaminated food as was suggested by these comments. The act permits establishing tolerances and action levels for food that has been unavoidably contaminated. If, however, the food was at some stage of its production unlawfully (i.e., avoidably) contaminated, then the act contemplates that such food shall ordinarily not be marketed. Consequently, the Commissioner concludes that such food should be permitted to be marketed only in the most extraordinary circumstances.

The proper functioning of the agency's regulatory program requires that unlawfully contaminated food ordinarily be destroyed to make unlawful action unprofitable. The fact that the present owner of the food may not have been responsible for the avoidable contamination is not a convincing reason for departing from this policy. To create an exception for persons who unknowingly purchase contaminated foods would permit persons engaged in illegal conduct to profit from their illegal actions. If unlawfully contaminated food were per-

mitted to be sold, then its owner would have no cause of action for damages in a civil action against the person responsible for the contamination. The only action that could be taken against the person responsible for the contamination would be a criminal prosecution, where the government is required to prove guilt beyond a reasonable doubt, and where the penalties imposed are likely to be small in relationship to the value of the goods. Consequently, the Commissioner concludes that it is necessary for proper enforcement of the act that unlawfully contaminated food ordinarily be seized and destroyed, notwithstanding the fact that it may be at the time of such destruction in the hands of an innocent party, and notwithstanding the fact it may on occasion be safe for consumption.

24. One comment sought clarification of § 109.8 which refers to "a substantial adverse impact on the national food supply" and stated that carload or warehouse lots of adulterated foods should not fall into this category. Another questioned whether the unavailability of one variety of fruit or vegetable would result in a "substantial adverse impact." Other examples posed included whether a few pennies per week inflation in the price of food would constitute such an adverse impact and whether the bankruptcy of a major food company as a result of destruction or diversion of certain food would constitute a substantial adverse impact on the national food supply.

The Commissioner agrees that the loss of carload or warehouse lots of adulterated food would almost never have a substantial adverse impact on the national food supply. It would not be appropriate to examine and pass on all possible circumstances at this time, however. In accordance with § 109.8(a)(2), whenever possible an exemption will be issued only after opportunity for public comment.

25. One comment stated that, if unlawfully contaminated food is permitted to be sold in accordance with § 109.8, FDA should investigate the reason for the contamination and not exclude civil or criminal action against responsible individuals even though the food was sold.

The Commissioner agrees with this comment. Granting an exemption does not exempt from liability the person who unlawfully contaminated the food. The Food and Drug Administration would investigate and initiate appropriate regulatory action against persons responsible for unlawfully contaminated food, even if the food were permitted to be sold.

26. Comments objected to the provision in § 109.6(d) that applies when the effectiveness of a tolerance is stayed pursuant to section 701(e)(2) of the act (21 U.S.C. 371(e)(2)) by the filing of an objection. Under that section, the order establishing the tolerance is deemed to be an order establishing an action level until final action is taken upon the objection. Comments argued that if a hearing is requested, the reasonableness of the tolerance would

be in doubt and that, therefore, its enforcement as an action level would not be justified. One comment suggested that a tolerance become an action level only in cases where a hazard to health is involved.

The Commissioner notes that if the substance that is the subject of the tolerance is a food additive, it is unlawful at any detectable level, under section 402(a)(2)(C) of the act (21 U.S.C. 342(a)(2)(C)). Thus, if a tolerance is stayed by an objection, the presence of the substance is unlawful at any level, and regulatory action may be taken; an action level is appropriate to determine the level at which action should be taken. This approach was approved by the Court of Appeals in "Natick Paperboard Corp. v. Weinberger," cited above.

If the substance is not a food additive, but is an unavoidable "added" poisonous or deleterious substance, then action may be taken pursuant to section 402(a)(1) of the act, which remains applicable to a particular substance until a tolerance is in effect. Thus, for substances that are not food additives, a tolerance indicates the level at which the Commissioner will take action against a substance on the ground that the level may be injurious to health. The establishment of a tolerance does not make unlawful what would otherwise be lawful; it may, however, make lawful what would otherwise be unlawful.

The Commissioner rejects the suggestion that a tolerance stayed by an objection should become an action level only in cases where a hazard to health is involved. By hypothesis, in the case of poisonous or deleterious substances, a potential hazard to health always exists, and that is the basis upon which action levels and tolerances are established.

27. One comment asserted that FDA may not avoid the procedures of section 406 of the act by establishing an action level. The comment stated that where Congress has specified with particularity the hearing procedures by which a certain administrative action may be taken, an agency is without authority to depart from the congressionally mandated process. The comment asserted that FDA is obligated to elect one of two courses: it must either disclaim any intent to attach the force of law to its action levels, or it must adopt those action levels as tolerances under section 406 of the act and in accord with the procedures specified in section 701(e) of the act.

The Commissioner disagrees. As to those substances that would be illegal at any level in the absence of an action level, e.g., because they are food additives, the courts have upheld FDA's authority to issue action levels. Those cases were cited in the preamble to the proposed regulation. As to other substances, the act clearly contemplates that the Government may proceed against a contaminated food under section 402(a)(1) of the act when no tolerance is effective. Furthermore, in light of the procedure adopted for establishing action levels in the regulations, this point, for the present at least, is moot.

28. One comment included data and arguments concerning the tolerance for polychlorinated biphenyls.

The Commissioner notes that the tolerances for polychlorinated biphenyls were not proposed in the Federal Register of December 6, 1974, but were simply reprinted because the section number is being changed.

29. One comment stated that the republication of the tolerance for polychlorinated biphenyls in paper-packaging materials should state that the regulation is stayed.

The Commissioner agrees and has added an appropriate note.

30. One comment offered an interpretation of the proviso in section 402(a)(2)(C) of the act, which provides that a pesticide chemical present in a processed food is lawful if the residue in the processed food when ready to eat is not greater than the tolerance prescribed for the raw agricultural commodity. The comment interpreted the term "ready to eat" as permitting a processed food to contain a higher concentration of pesticide than is permitted for the raw agricultural commodity if the food is "disbursed" in other food when consumed in a manner such that the pesticide level of the mixture is below the tolerance. As an example, the comment cited dehydrated peppers, which contain pesticide residues greater than the tolerance for raw peppers because of the dehydration; the comment contended that the dehydration pepper was not "ready to eat" until it had been incorporated into a finished food and that the tolerance is properly applied to the entire finished food into which it was incorporated.

The Commissioner disagrees with the interpretation of the act offered by the comment. The term "ready to eat" does not permit compliance with a tolerance to be determined after the food has been mixed with other food; the term applies when a food is to be modified before use, e.g., by hydration.

One of the principal purposes for which a tolerance is established by regulation is to provide a readily ascertainable standard by which FDA and affected persons can determine whether a particular lot of food conforms to the requirements of the law. Under the interpretation suggested by the comment, there would be no definite standard to determine whether a particular lot of dehydrated peppers complies with the law. Instead, its legality would turn on uncertain subsequent events involving the manner in which the food was to be used. By contrast, foods that are not ready to eat because they must be modified in a particular way may be so modified prior to analysis, and compliance may thus be determined with certainty. In the event that processing increases the concentration of a pesticide, the act permits a tolerance to be established under section 409 of the act; this procedure permits a clear, enforceable limit and is the procedure to be followed.

31. The Commissioner has revised proposed § 109.4(b) to delete the reference to section 402(a)(1) of the act. This reference was inconsistent with § 109.6(c),

which establishes the standards for an action level. The Commissioner has also revised proposed § 109.6(d), which refers to the statutory authority for issuing tolerances and action levels, by explicitly stating the pertinent sections of the act.

32. The Commissioner has revised proposed § 109.6(a) to clarify the relationship of FDA and EPA in establishing tolerances and action levels for added poisonous and deleterious substances that are also pesticide chemicals. The regulations that EPA issues under sections 406, 408, and 409 of the act will establish tolerances; FDA will implement action levels under the criteria of these procedural regulations. Upon FDA's request, EPA will recommend an action level based on the criteria set forth in these procedural regulations.

33. The Commissioner advises that the prohibition in the regulations against marketing unlawfully contaminated food is not intended to change the agency's current policy permitting the diversion of contaminated human food into use as animal feed when such diversion would pose no significant risks to human or animal health. Proposed regulations will be published in the Federal Register to formally establish the permissible conditions for such diversion.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 306, 402(a), 406, 408, 409, 701(a), 52 Stat. 1045-1046 as amended, 1049 as amended, 1055, 68 Stat. 511-518 as amended; 72 Stat. 1785-1788 as amended (21 U.S.C. 336, 342(a), 346, 346a, 348, 371(a))) and under authority delegated to him (21 CFR 5.1), Chapter I of Title 21 of the Code of Federal Regulations is amended as follows:

1. By revising Part 109 to read as follows:

**PART 109—UNAVOIDABLE CONTAMINANTS IN FOOD FOR HUMAN CONSUMPTION AND FOOD-PACKAGING MATERIAL**

Subpart A—General Provisions	
Sec.	
109.3	Definitions and interpretations.
109.4	Establishment of regulations.
109.5	Petitions.
109.6	Added poisonous or deleterious substances.
109.7	Unavoidability.
109.8	Exemptions.
109.15	Use of polychlorinated biphenyls (PCB's) in establishments manufacturing food-packaging materials.
Subpart B—Tolerances for Unavoidable Poisonous or Deleterious Substances	
109.30	Temporary tolerances for polychlorinated biphenyls (PCB's).
Subpart C—Naturally Occurring Poisonous or Deleterious Substances—[Reserved]	
AUTHORITY: Secs. 306, 402(a), 406, 408, 409, 701, 52 Stat. 1045-1046 as amended, 1049 as amended, 1055-1056 as amended, 68 Stat. 511-518 as amended, 72 Stat. 1785-1788 as amended (21 U.S.C. 336, 342(a), 346, 346a, 348, 371).	
Subpart A—General Provisions	
§ 109.3	Definitions and interpretations.
(a)	"Act" means the Federal Food, Drug, and Cosmetic Act.

(b) The definitions of terms contained in section 201 of the act are applicable to such terms when used in this part unless modified in this section.

(c) A "naturally occurring poisonous or deleterious substance" is a poisonous or deleterious substance that is an inherent natural constituent of a food and is not the result of environmental, agricultural, industrial, or other contamination.

(d) An "added poisonous or deleterious substance" is a poisonous or deleterious substance that is not a naturally occurring poisonous or deleterious substance. When a naturally occurring poisonous or deleterious substance is increased to abnormal levels through mishandling or other intervening acts, it is an added poisonous or deleterious substance to the extent of such increase.

(e) "Food" includes human food and substances migrating to food from food-contact articles.

**§ 109.4 Establishment of regulations.**

(a) When appropriate under the criteria of § 109.6, a tolerance for an added poisonous or deleterious substance, which may be a food additive, may be established by regulation in Subpart B of this part under the provisions of section 406 of the act. A tolerance may prohibit any detectable amount of the substance in food.

(b)(1) When appropriate under the criteria of § 109.6, an action level for an added poisonous or deleterious substance, which may be a food additive, may be established to define the level of contamination at which a food will be deemed to be adulterated. An action level may prohibit any detectable amount of the substance in food.

(2) Whenever an action level is established, a notice shall be published in the Federal Register as soon as practicable thereafter. The notice shall call attention to the material supporting the action level which shall be on file with the Hearing Clerk before the notice is published. The notice shall invite public comment on the action level. Regulatory action may be taken at any time after an action level is established, and need not await publication of the notice. An action level may be changed at any time if the protection of the public health so requires. A notice shall be published in the Federal Register as soon as practicable after an action level is changed.

(c) A regulation may be established in Subpart C of this part to identify a food containing a naturally occurring poisonous or deleterious substance which will be deemed to be adulterated under section 402(a)(1) of the act. These regulations do not constitute a complete list of such foods.

**§ 109.5 Petitions.**

The Commissioner of Food and Drugs, either on his own initiative or on behalf of any interested person who has submitted a petition, may issue a proposal to establish, revoke, or amend a regulation under this part. Any such petition shall include an adequate factual basis to support the petition, shall be in the

form set forth in § 10.65 of this chapter, and will be published in the **FEDERAL REGISTER** for comment if it contains reasonable grounds for the proposed regulation.

#### § 109.6 Added poisonous or deleterious substances.

(a) Use of an added poisonous or deleterious substance, other than a pesticide chemical, that is also a food additive will be controlled by a regulation issued under section 409 of the act when possible. When such a use cannot be approved under the criteria of section 409 of the act, or when the added poisonous or deleterious substance is not a food additive, a tolerance or action level may be established pursuant to the criteria established in paragraphs (b) and (c) of this section. Residues resulting from the use of an added poisonous or deleterious substance that is also a pesticide chemical will ordinarily be controlled by a tolerance established in a regulation issued under section 406, 408, or 409 by the U.S. Environmental Protection Agency (EPA). When such a regulation has not been issued, an action level for an added poisonous or deleterious substance that is also a pesticide chemical may be established by the Food and Drug Administration. The Food and Drug Administration will request EPA to recommend such an action level pursuant to the criteria established in paragraph (c) of this section.

(b) A tolerance for an added poisonous or deleterious substance in any food may be established when the following criteria are met:

(1) The substance cannot be avoided by good manufacturing practice.

(2) The tolerance established is sufficient for the protection of the public health, taking into account the extent to which the presence of the substance cannot be avoided and the other ways in which the consumer may be affected by the same or related poisonous or deleterious substances.

(3) No technological or other changes are foreseeable in the near future that might affect the appropriateness of the tolerance established. Examples of changes that might affect the appropriateness of the tolerance include anticipated improvements in good manufacturing practice that would change the extent to which use of the substance is unavoidable and anticipated studies expected to provide significant new toxicological or use data.

(c) An action level for an added poisonous or deleterious substance in any food may be established when the criteria in paragraph (b) of this section are met, except that technological or other changes that might affect the appropriateness of the tolerance are foreseeable in the near future. An action level shall cease to be enforced and shall be revoked when a tolerance for the same substance and use has become effective.

(d) Tolerances will be established under authority appropriate for action levels (sections 306, 402(a), and 701(a) of the act, together with section 408 or

409 if appropriate) as well as under authority appropriate for tolerances (sections 406 and 701 of the act). In the event the effectiveness of a tolerance is stayed pursuant to section 701(e) (2) of the act by the filing of an objection, the order establishing the tolerance shall be deemed to be an order establishing an action level until final action is taken upon such objection.

#### § 109.7 Unavoidability.

(a) Tolerances and action levels in this part are established at levels based on the unavoidability of the poisonous or deleterious substance concerned and do not establish a permissible level of contamination where it is avoidable.

(b) Compliance with tolerances and action levels does not excuse failure to observe either the requirement in section 402(a) (4) of the act that food may not be prepared, packed, or held under insanitary conditions or the other requirements in this chapter that food manufacturers must observe current good manufacturing practices. Evidence obtained through factory inspection or otherwise indicating such a violation renders the food unlawful, even though the amounts of poisonous or deleterious substances are lower than the currently established tolerances or action levels. The manufacturer of food must at all times utilize quality control procedures which will reduce contamination to the lowest level currently feasible.

#### § 109.8 Exceptions.

(a) The Commissioner may exempt from regulatory action and permit the marketing of any food that is unlawfully contaminated with a poisonous or deleterious substance if:

(1) He determines (i) based upon all available scientific evidence, that the food is safe for consumption and (ii) that destruction or diversion of the food involved would result in a substantial adverse impact on the national food supply.

(2) Such determination is published as a notice in the **FEDERAL REGISTER** and public comment shall be invited on the determination. The notice shall call attention to the material supporting the determination, which shall be on file with the Hearing Clerk before the notice is published.

(3) The determination identifies the level of contamination allowed by the exemption, and the food to which it applies, e.g., the specific growing area or other identifying information. The exemption shall not apply to any other food produced in any other area or at any other time. Contaminated food not subject to the exemption will remain subject to regulatory action.

(b) Any person responsible for contamination of the food involved, or shipment of any such food in interstate commerce prior to the issuance of an exemption pursuant to this section, shall remain subject to regulatory action pursuant to sections 302 (injunction proceedings) and 303 (penalties) of the act.

(c) In the case of a poisonous or deleterious substance which is a pesticide

chemical, the level of contamination allowed by the exemption shall, upon request of the Food and Drug Administration, be specified by the Environmental Protection Agency pursuant to paragraph (a) (1) (i) of this section and promulgated by the Commissioner. No exemption for a pesticide chemical shall be promulgated without the concurrence of the Environmental Protection Agency.

#### § 109.15 Use of polychlorinated biphenyls (PCB's) in establishments manufacturing food-packaging materials.

(a) Polychlorinated biphenyls (PCB's) represent a class of toxic industrial chemicals manufactured and sold under a variety of trade names, including: Aroclor (United States); Phenoclor (France); Colphen (Germany); and Kanaclor (Japan). PCB's are highly stable, heat resistant, and nonflammable chemicals. Industrial uses of PCB's include, or did include in the past, their use as electrical transformer and capacitor fluids, heat transfer fluids, hydraulic fluids, and plasticizers, and in formulations of lubricants, coatings, and inks. Their unique physical and chemical properties and widespread, uncontrolled industrial applications have caused PCB's to be a persistent and ubiquitous contaminant in the environment, causing the contamination of certain foods. In addition, incidents have occurred in which PCB's have directly contaminated animal feeds as a result of industrial accidents (leakage or spillage of PCB fluids from plant equipment). These accidents in turn caused the contamination of food products intended for human consumption (meat, milk and eggs). Investigations by the Food and Drug Administration have revealed that a significant percentage of paper food-packaging material contains PCB's which can migrate to the packaged food. The origin of PCB's in such material is not fully understood. Reclaimed fibers containing carbonless copy paper (contains 3 to 5 percent PCB's) have been identified as a primary source of PCB's in paper products. Some virgin paper products have also been found to contain PCB's. The source of which is generally attributed to direct contamination from industrial accidents from the use of PCB-containing equipment and machinery in food-packaging manufacturing establishments. Since PCB's are toxic chemicals, the PCB contamination of food-packaging materials as a result of industrial accidents, which can cause the PCB contamination of food, represents a hazard to public health. It is therefore necessary to place certain restrictions on the industrial uses of PCB's in establishments manufacturing food-packaging materials.

(b) The following special provisions are necessary to preclude the accidental PCB contamination of food-packaging materials:

(1) New equipment or machinery for manufacturing food-packaging materials shall not contain or use PCB's.

(2) On or before September 4, 1973, the management of establishments manufacturing food-packaging materials shall:

(i) Have the heat exchange fluid used in existing equipment for manufacturing food-packaging materials sampled and tested to determine whether it contains PCB's or verify the absence of PCB's in such formulations by other appropriate means. On or before September 4, 1973, any such fluid formulated with PCB's must to the fullest extent possible commensurate with current good manufacturing practices be replaced with a heat exchange fluid that does not contain PCB's.

(ii) Eliminate to the fullest extent possible commensurate with current good manufacturing practices from the establishment any other PCB-containing equipment, machinery and materials wherever there is a reasonable expectation that such articles could cause food-packaging materials to become contaminated with PCB's either as a result of normal use or as a result of accident, breakage, or other mishap.

(iii) The toxicity and other characteristics of fluids selected as PCB replacements must be adequately determined so that the least potentially hazardous replacement is used. In making this determination with respect to a given fluid, consideration should be given to (a) its toxicity; (b) the maximum quantity that could be spilled onto a given quantity of food before it would be noticed, taking into account its color and odor; (c) possible signaling devices in the equipment to indicate a loss of fluid, etc.; and (d) its environmental stability and tendency to survive and be concentrated through the food chain. The judgment as to whether a replacement fluid is sufficiently non-hazardous is to be made on an individual installation and operation basis.

(c) The provisions of this section do not apply to electrical transformers and condensers containing PCB's in sealed containers.

#### Subpart B—Tolerance for Unavoidable Poisonous or Deleterious Substances

#### § 109.30 Polychlorinated biphenyls (PCB's).

(a) Polychlorinated biphenyls (PCB's) are toxic, industrial chemicals. Because of their widespread, uncontrolled industrial applications, PCB's have become a persistent and ubiquitous contaminant in the environment. As a result, certain foods and animal feeds, principally those of animal and marine origin, contain PCB's as unavoidable, environmental contaminants. PCB's are transmitted to the food portion (meat, milk, and eggs) of food producing animals ingesting PCB contaminated animal feed. In addition, a significant percentage of paper food-packaging materials contain PCB's which may migrate to the packaged food. The source of PCB's in paper food-pack-

aging materials is primarily of certain types of carbonless copy paper (containing 3 to 5 percent PCB's) in waste paper stocks used for manufacturing recycled paper. Therefore, temporary tolerances for residues of PCB's as unavoidable environmental or industrial contaminants are established for a sufficient period of time following the effective date of this paragraph to permit the elimination of such contaminants at the earliest practicable time. For the purposes of this paragraph, the term "polychlorinated biphenyls (PCB's)" is applicable to mixtures of chlorinated biphenyl compounds, irrespective of which mixture of PCB's is present as the residue. The temporary tolerances for residues of PCB's are as follows:

(1) 2.5 parts per million in milk (fat basis).

(2) 2.5 parts per million in manufactured dairy products (fat basis).

(3) 5 parts per million in poultry (fat basis).

(4) 0.5 parts per million in eggs.

(5) 0.2 parts per million in finished animal feed for food-producing animals (except the following finished animal feeds: feed concentrates, feed supplements and feed premixes).

(6) 2 parts per million in animal feed components of animal origin, including fishmeal and other by-products of marine origin and in finished animal feed concentrates, supplements, and premixes intended for food producing animals.

(7) 5 parts per million in fish and shellfish (edible portion). The edible portion of fish excludes head, scales, viscera, and inedible bones.

(8) 0.2 parts per million in infant and junior foods.

(9) 10 parts per million in paper food-packaging material intended for or used with human food, finished animal feed and any components intended for animal feeds. The tolerance shall not apply to paper food-packaging material separated from the food therein by a functional barrier which is impermeable to migration of PCB's.

(b) A compilation entitled "Analytical Methodology for Polychlorinated Biphenyls, February 1973" for determining compliance with the tolerances established in this section is available from the Hearing Clerk, Department of Health, Education, and Welfare, Room 4-65, 5600 Fishers Lane, Rockville, Md. 20857.

NOTE.—At 38 FR 22794, Aug. 24, 1973, the following appeared concerning § 109.30(a) (9) (formerly 122.10(a) (9)):

• • • § 109.30(a) (9) is hereby stayed pending full review of the objections and requests for hearing. • • •

In the interim, as stated in the final order (38 FR 18098) the Food and Drug Administration will enforce the temporary tolerance level established by § 109.30(a) (9) by seizing any paper food-packaging material shipped in interstate commerce after September 4, 1973, containing higher than the specified level of PCB's as adulterated in violation of sec. 402 of the act.

#### Subpart C—Naturally Occurring Poisonous or Deleterious Substances [Reserved]

#### PART 180—FOOD ADDITIVES PERMITTED IN FOOD ON AN INTERIM BASIS OR IN CONTACT WITH FOOD PENDING ADDITIONAL STUDY

2. By adding new paragraph (f) to § 180.1 to read as follows:

#### § 180.1 General.

(f) Where appropriate, an emergency action level may be issued for a substance subject to paragraph (a) of this section that is not an approved food additive, pending the issuance of a final interim food additive regulation. Such an action level shall be issued pursuant to sections 306 and 402(a) of the act to identify, based upon available data, a safe level of use for the substance. Such an action level shall be issued in a notice published in the **FEDERAL REGISTER** and shall be followed as soon as practicable by a proposed interim food additive regulation. Where the available data do not permit establishing an action level for the safe use of a substance, use of the substance may be prohibited. The identification of a prohibited substance may be made in Part 189 of this chapter when appropriate.

#### PART 181—PRIOR-SANCTIONED FOOD INGREDIENTS

3. By adding new paragraph (c) to § 181.1 to read as follows:

#### § 181.1 General.

(c) Where appropriate, an emergency action level may be issued for a prior-sanctioned substance, pending the issuance of a final regulation in accordance with paragraph (b) of this section. Such an action level shall be issued pursuant to section 402(a) of the act to identify, based upon available data, conditions of use of the substance that may be injurious to health. Such an action level shall be issued in a notice published in the **FEDERAL REGISTER** and shall be followed as soon as practicable by a proposed regulation in accordance with paragraph (b) of this section. Where the available data demonstrate that the substance may be injurious at any level, use of the substance may be prohibited. The identification of a prohibited substance may be made in Part 189 of this chapter when appropriate.

#### PART 509—UNAVOIDABLE CONTAMINANTS IN ANIMAL FOOD AND FOOD-PACKAGING MATERIAL

4. Part 509 is revised to read as follows:

#### Subpart A—General Provisions

Sec.	
509.3	Definitions and interpretations.
509.4	Establishment of regulations.
509.5	Petitions.
509.6	Added poisonous or deleterious substances.

- 509.7 Unavoidability.  
 509.8 Exemptions.  
 509.15 Use of polychlorinated biphenyls (PCB's) in establishments manufacturing food-packaging materials.

**Subpart B—Tolerances for Unavoidable Poisonous or Deleterious Substances**

- 509.30 Temporary tolerances for polychlorinated biphenyls (PCB's).

**Subpart C—Naturally Occurring Poisonous or Deleterious Substances—(Reserved)**

Authority: Secs. 306, 402(a), 406, 408, 409, 701, 52 Stat. 1045-1046 as amended, 1049 as amended, 1055-1056 as amended, 68 Stat. 511-518 as amended, 72 Stat. 1785-1788 as amended (21 U.S.C. 336, 342(a), 346, 346a, 348, 371).

**Subpart A—General Provisions**

**§ 509.3 Definitions and interpretations.**

(a) "Act" means the Federal Food, Drug, and Cosmetic Act.  
 (b) The definitions of terms contained in section 201 of the act are applicable to such terms when used in this part unless modified in this section.  
 (c) A "naturally occurring poisonous or deleterious substance" is a poisonous or deleterious substance that is an inherent natural constituent of a food and is not the result of environmental, agricultural, industrial, or other contamination.

(d) An "added poisonous or deleterious substance" is a poisonous or deleterious substance that is not a naturally occurring poisonous or deleterious substance. When a naturally occurring poisonous or deleterious substance is increased to abnormal levels through mis-handling or other intervening acts, it is an added poisonous or deleterious substance to the extent of such increase.

(e) "Food" includes pet food, animal feed, and substances migrating to food from food-contact articles.

**§ 509.4 Establishment of regulations.**

When appropriate under the criteria of § 509.6, a tolerance for an added poisonous or deleterious substance, which may be a food additive, may be established by regulation in Subpart B of this part under the provisions of section 406 of the act. A tolerance may prohibit any detectable amount of the substance in food.

(b) (1) When appropriate under the criteria of § 509.6, an action level for an added poisonous or deleterious substance, which may be a food additive, may be established to define the level of contamination at which a food will be deemed to be adulterated. An action level may prohibit any detectable amount of the substance in food.

(2) Whenever an action level is established, a notice shall be published in the FEDERAL REGISTER as soon as practicable thereafter. The notice shall call attention to the material supporting the action level which shall be on file with the Hearing Clerk before the notice is published. The notice shall invite public comment on the action level. Regulatory action may be taken at any time after an action level is established, and need not await publication of the notice. An

action level may be changed at any time if the protection of the public health so requires. A notice shall be published in the FEDERAL REGISTER as soon as practicable after an action level is changed.

(c) A regulation may be established in Subpart C of this part to identify a food containing a naturally occurring poisonous or deleterious substance which will be deemed to be adulterated under section 402(a) (1) of the act. These regulations do not constitute a complete list of such foods.

**§ 509.5 Petitions.**

The Commissioner of Food and Drugs, either on his own initiative or on behalf of any interested person who has submitted a petition, may issue a proposal to establish, revoke, or amend a regulation under this part. Any such petition shall include an adequate factual basis to support the petition, shall be in the form set forth in § 10.65 of this chapter, and will be published in the FEDERAL REGISTER for comment if it contains reasonable grounds for the proposed regulation.

**§ 509.6 Added poisonous or deleterious substances.**

(a) Use of an added poisonous or deleterious substance, other than a pesticide chemical, that is also a food additive will be controlled by a regulation issued under section 409 of the act when possible. When such a use cannot be approved under the criteria of section 409, or when the added poisonous or deleterious substance is not a food additive, a tolerance or action level may be established pursuant to the criteria established in paragraphs (b) and (c) of this section. Residues resulting from the use of an added poisonous or deleterious substance that is also a pesticide chemical will ordinarily be controlled by a tolerance established in a regulation issued under section 406, 408, or 409 by the U.S. Environmental Protection Agency (EPA). When such a regulation has not been issued, an action level for an added poisonous or deleterious substance that is also a pesticide chemical may be established by the Food and Drug Administration. The Food and Drug Administration will request EPA to recommend such an action level pursuant to the criteria established in paragraph (c) of this section.

(b) A tolerance for an added poisonous or deleterious substance in any food may be established when the following criteria are met:

(1) The substance cannot be avoided by good manufacturing practice.

(2) The tolerance established is sufficient for the protection of the public health, taking into account the extent of which the presence of the substance cannot be avoided and the other ways in which the consumer may be affected by the same or related poisonous or deleterious substances.

(3) No technological or other changes are foreseeable in the near future that might affect the appropriateness of the tolerance established. Examples of

changes that might affect the appropriateness of the tolerance include anticipated improvements in good manufacturing practice that would change the extent to which use of the substance is unavoidable and anticipated studies expected to provide significant new toxicological or use data.

(c) An action level for an added poisonous or deleterious substance in any food may be established when the criteria in paragraph (b) of this section are met, except that technological or other changes that might affect the appropriateness of the tolerance are foreseeable in the near future. An action level shall cease to be enforced and shall be revoked when a tolerance for the same substance and use has become effective.

(d) Tolerances will be established under authority appropriate for action levels (sections 306, 402(a), and 701(a) of the act, together with section 408 or 409 if appropriate) as well as under authority appropriate for tolerances (sections 406 and 701 of the act). In the event the effectiveness of a tolerance is stayed pursuant to section 701(e) (2) of the act by the filing of an objection, the order establishing the tolerance shall be deemed to be an order establishing an action level until final action is taken upon such objection.

**§ 509.7 Unavoidability.**

(a) Tolerances and action levels in this part are established at levels based on the unavoidability of the poisonous or deleterious substance concerned and do not establish a permissible level of contamination where it is avoidable.

(b) Compliance with tolerances and action levels does not excuse failure to observe either the requirement in section 402(a) (4) of the Federal Food, Drug, and Cosmetic Act that food may not be prepared, packed, or held under insanitary conditions or the other requirements in this chapter that food manufacturers must observe current good manufacturing practices. Evidence obtained through factory inspection or otherwise indicating such a violation renders the food unlawful, even though the amounts of poisonous or deleterious substances are lower than the currently established tolerances or action levels. The manufacturer of food must at all times utilize quality control procedures which will reduce contamination to the lowest level currently feasible.

**§ 509.8 Exemptions.**

(a) The Commissioner may exempt from regulatory action and permit the marketing of any food that is unlawfully contaminated with a poisonous or deleterious substance if:

(1) He determines (i) based upon all available scientific evidence, that the food is safe for consumption, and (ii) that destruction or diversion of the food involved would result in a substantial adverse impact on the national food supply.

(2) Such determination is published as a notice in the FEDERAL REGISTER and public comment shall be invited on the determination. The notice shall call at-

tention to the material supporting the determination, which shall be on file with the Hearing Clerk before the notice is published.

(3) The determination identifies the level of contamination allowed by the exemption, and the food to which it applies, e.g., the specific growing area or other identifying information. The exemption shall not apply to any other food produced in any other area or at any other time. Contaminated food not subject to the exemption will remain subject to regulatory action.

(b) Any person responsible for contamination of the food involved, or shipment of any such food in interstate commerce prior to the issuance of an exemption pursuant to this section, shall remain subject to regulatory action pursuant to sections 302 (injunction proceedings) and 303 (penalties) of the act.

(c) In the case of a poisonous or deleterious substance which is a pesticide chemical, the level of contamination allowed by the exemption shall, upon request of the Food and Drug Administration, be specified by the Environmental Protection Agency pursuant to paragraph (a) (1) (i) of this section and promulgated by the Commissioner. No exemption for a pesticide chemical shall be promulgated without the concurrence of the Environmental Protection Agency.

**§ 509.15 Use of polychlorinated biphenyls (PCB's) in establishments manufacturing food-packaging materials.**

(a) Polychlorinated biphenyls (PCB's) represent a class of toxic industrial chemicals manufactured and sold under a variety of trade names, including: Aroclor (United States); Phenoclor (France); Colphen (Germany); and Kanaclor (Japan). PCB's are highly stable, heat resistant, and nonflammable chemicals. Industrial uses of PCB's include, or did include in the past, their use as electrical transformer and capacitor fluids, heat transfer fluids, hydraulic fluids, and plasticizers, and in formulations of lubricants, coatings, and inks. Their unique physical and chemical properties and widespread, uncontrolled industrial applications have caused PCB's to be a persistent and ubiquitous contaminant in the environment, causing the contamination of certain foods. In addition, incidents have occurred in which PCB's have directly contaminated animal feeds as a result of industrial accidents (leakage or spillage of PCB fluids from plant equipment). These accidents in turn caused the contamination of food products intended for human consumption (meat, milk and eggs). Investigations by the Food and Drug Administration have revealed that a significant percentage of paper foodpackaging material contains PCB's which can migrate to the packaged food. The origin

of PCB's in such material is not fully understood. Reclaimed fibers containing carbonless copy paper (contains 3 to 5 percent PCB's) have been identified as a primary source of PCB's in paper products. Some virgin paper products have also been found to contain PCB's, the source of which is generally attributed to direct contamination from industrial accidents from the use of PCB-containing equipment and machinery in food-packaging manufacturing establishments. Since PCB's are toxic chemicals, the PCB contamination of food-packaging materials as a result of industrial accidents, which can cause the PCB contamination of food, represents a hazard to public health. It is therefore necessary to place certain restrictions on the industrial uses of PCB's in establishments manufacturing food-packaging materials.

(b) The following special provisions are necessary to preclude the accidental PCB contamination of food-packaging materials:

(1) New equipment or machinery for manufacturing food-packaging materials shall not contain or use PCB's.

(2) On or before September 4, 1973, the management of establishments manufacturing food-packaging materials shall:

(i) Have the heat exchange fluid used in existing equipment for manufacturing food-packaging materials sampled and tested to determine whether it contains PCB's or verify the absence of PCB's in such formulations by other appropriate means. On or before Sept. 4, 1973, any such fluid formulated with PCB's must to the fullest extent possible commensurate with current good manufacturing practices be replaced with a heat exchange fluid that does not contain PCB's.

(ii) Eliminate to the fullest extent possible commensurate with current good manufacturing practices from the establishment any other PCB-containing equipment, machinery and materials wherever there is a reasonable expectation that such articles could cause food-packaging materials to become contaminated with PCB's either as a result of normal use or as a result of accident, breakage, or other mishap.

(iii) The toxicity and other characteristics of fluids selected as PCB replacements must be adequately determined so that the least potentially hazardous replacement is used. In making this determination with respect to a given fluid, consideration should be given to (a) its toxicity; (b) the maximum quantity that could be spilled onto a given quantity of food before it would be noticed, taking into account its color and odor; (c) possible signaling devices in the equipment to indicate a loss of fluid, etc.; and (d) its environmental stability and tendency to survive and be concentrated through the food chain. The judgment as to

whether a replacement fluid is sufficiently non-hazardous is to be made on an individual installation and operation basis.

(c) The provisions of this section do not apply to electrical transformers and condensers containing PCB's in sealed containers.

**Subpart B—Tolerances for Unavoidable Poisonous or Deleterious Substances**

**§ 509.30 Temporary tolerances for polychlorinated biphenyls (PCB's).**

(a) Polychlorinated biphenyls (PCB's) are toxic, industrial chemicals. Because of their widespread, uncontrolled industrial applications, PCB's have become a persistent and ubiquitous contaminant in the environment. As a result, certain foods and animal feeds, principally those of animal and marine origin, contain PCB's as unavoidable, environmental contaminants. PCB's are transmitted to the food portion (meat, milk, and eggs) of food producing animals ingesting PCB contaminated animal feed. In addition, a significant percentage of paper food-packaging materials contain PCB's which may migrate to the packaged food. The source of PCB's in paper food-packaging materials is primarily of certain types of carbonless copy paper (containing 3 to 5 percent PCB's) in waste paper stocks used for manufacturing recycled paper. Therefore, temporary tolerances for residues of PCB's as unavoidable environmental or industrial contaminants are established for a sufficient period of time following the effective date of this paragraph to permit the elimination of such contaminants at the earliest practicable time. For the purposes of this paragraph, the term "polychlorinated biphenyls (PCB's)" is applicable to mixtures of chlorinated biphenyl compounds, irrespective of which mixture of PCB's is present as the residue. The temporary tolerances for residues of PCB's are as follows:

(1) 0.2 part per million in finished animal feed for food-producing animals (except the following finished animal feeds: feed concentrates, feed supplements, and feed premixes);

(2) 2 parts per million in animal feed components of animal origin, including fishmeal and other by-products of marine origin and in finished animal feed concentrates, supplements, and premixes intended for food-producing animals.

(3) 10 parts per million in paper food-packaging material intended for or used with finished animal feed and any components intended for animal feeds. The tolerance shall not apply to paper food-packaging material separated from the food therein by a functional barrier which is impermeable to migration of PCB's.

(b) A compilation entitled "Analytical Methodology for Polychlorinated Biphenyls, February 1973" for determining

compliance with the tolerances established in this section is available from the Hearing Clerk, Food and Drug Administration, Room 4-65, 5600 Fishers Lane, Rockville, MD 20857.

NOTE: At 38 FR 22794, August 24, 1973, the following appeared concerning § 509.30(a) (9) (formerly § 122.10(a) (9)):

• • • § 509.30(a) (9) is hereby stayed pending

full review of the objections and requests for hearing. • • •

In the interim, as stated in the final order (38 FR 18098) the Food and Drug Administration will enforce the temporary tolerance level established by § 509.30(a) (9) by seizing any paper food-packaging material shipped in interstate commerce after September 4, 1973 containing higher than the specified level of PCB's as adulterated in violation of sec. 402 of the act.

Subpart C—Naturally Occurring Poisonous or Deleterious Substances—[Reserved]

Effective date: These regulations shall become effective October 31, 1977.

Dated: September 23, 1977.

DONALD KENNEDY,  
Commissioner of Food and Drugs.

## Title 20—Employees' Benefits

CHAPTER II—SOCIAL SECURITY ADMINISTRATION, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED (1965.....)

Transfer and Recodification of Medicare Regulations

AGENCY: Health Care Financing Administration (HCFA), HEW.

ACTION: Final rule.

SUMMARY: This regulation deletes the contents of 20 CFR Part 405, relating to the Medicare program under title XVIII of the Social Security Act. The regulations under this Part 405 are being recodified under a newly created Chapter IV under title 42 of the Code of Federal Regulations, elsewhere in this Part. This recodification will bring together in a single chapter the regulations governing the three major programs of the Health Care Financing Administration (42 FR 13262).

The transfer will make the regulations more accessible and preclude confusion that now exists because of the codification under three different chapters under three different titles.

DATE: This regulation is effective on October 1, 1977.

FOR FURTHER INFORMATION CONTACT:

Luisa V. Iglesias, 202-245-0950.

SUPPLEMENTARY INFORMATION: Regulations under 20 CFR Parts 401, 404, Subpart J, and 422 continue to apply to the Medicare program. Applicable provisions of these regulations will be recodified later under the new 42 CFR Chapter IV.

20 CFR is amended by vacating Part 405 and redesignating its content as Subchapter B, Part 405 of 42 CFR Chapter IV.

(Sec. 1102, 49 Stat. 647 (42 U.S.C. 1302).)

(Catalog of Federal Domestic Assistance Program Nos. 13.800, Health Insurance for the Aged—Hospital Insurance and 13.801, Health Insurance for the Aged—Supplementary Medical Insurance.)

NOTE: The Health Care Financing Administration has determined that this regulation does not require preparation of an economic impact statement under Executive Order 11821, as amended by Executive Order 11949, and OMB Circular A-107.

Dated: September 13, 1977.

ROBERT A. DERZON,  
Administrator, Health Care  
Financing Administration.

Approved: September 26, 1977.

JOSEPH A. CALIFANO, Jr.,  
Secretary.

## [ 4110- ]

## Title 42—Public Health

CHAPTER I—PUBLIC HEALTH SERVICE, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

PART 101—PROFESSIONAL STANDARDS REVIEW

Transfer and Recodification of Regulations on Professional Standards Review Organizations

AGENCY: Health Care Financing Administration (HCFA), HEW.

ACTION: Final rule.

SUMMARY: This regulation deletes the contents of 42 CFR Part 101 relating to professional standards review organizations under the Social Security Act. The regulations are being recodified under a newly created Chapter IV of Title 42 of the Code of Federal Regulations elsewhere in this Part. This recodification will bring together in a single chapter the regulations governing the three major programs of the Health Care Financing Administration (42 FR 13264). The transfer will make the regulations more accessible and preclude the confusion that exists because of codification under three different chapters under three different titles.

DATE: This regulation is effective on October 1, 1977.

FOR FURTHER INFORMATION CONTACT:

Luisa V. Iglesias, 202-245-0950.

42 CFR is amended by vacating Part 101, redesignating its content as Subchapter D of a new Chapter IV, redesignating each subpart as a separate part, and redesignating all sections in accordance with the new part numbers.

(Sec. 1102, 49 Stat. 647 (42 U.S.C. 1302).)

(Catalog of Federal Domestic Assistance Program No. 13.800, Health Insurance for the Aged—Hospital Insurance; No. 13.801, Health Insurance for the Aged—Supplementary Medical Insurance.) The Health Care Financing Administration has determined that this regulation does not require preparation of an economic impact statement under Executive Order 11821, as amended by Executive Order 11949, and OMB Circular A-107.

Dated: September 13, 1977.

ROBERT A. DERZON,  
Administrator, Health Care  
Financing Administration.

Approved: September 26, 1977.

JOSEPH A. CALIFANO, Jr.,  
Secretary.

CHAPTER IV—HEALTH CARE FINANCING ADMINISTRATION, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

HEALTH CARE REGULATIONS—MEDIC-AID; MEDICARE; HEALTH STANDARDS AND QUALITY

Establishment of New Chapter

AGENCY: Health Care Financing Administration (HCFA), HEW.

ACTION: Final rule.

SUMMARY: This regulation establishes a new Chapter IV in Title 42 of the Code of Federal Regulations for the Health Care Financing Administration. The new chapter includes regulations pertaining to the new agency, created by the Reorganization order of March 9, 1977 (42 FR 13262), previously contained in three different chapters under three different titles.

Bringing the regulations together in a single chapter will preclude confusion and make the regulations more accessible.

DATE: This regulation is effective October 1, 1977.

FOR FURTHER INFORMATION CONTACT:

Luisa V. Iglesias, 202-245-0950.

42 CFR is amended by establishing a new "Chapter IV—Health Care Financing Administration" with content as follows:

1. Subchapter A—[RESERVED].
2. Subchapter B—Medicare Programs.

This subchapter contains regulations transferred today from 20 CFR Part 405 and redesignated as 42 CFR Part 405—Federal Health Insurance for the Aged and Disabled.

3. Subchapter C—Medical Assistance Programs. This subchapter contains regulations transferred today from 45 CFR Chapter II, Parts 246, 248, 249, 250, 251, and 252 and redesignated as follows:

New	Old
Title 42, Chapter IV Health Care Financing Administration, Subchapter C Medical Assistance Programs.	
Part 446 State Organization—Medical Assistance Program.	Pt. 246
Part 448 Coverage and Conditions of Eligibility for Medical Assistance.	Pt. 248
Part 449 Services and Payment in Medical Assistance Programs.	Pt. 249
Part 450 Administration of Medical Assistance Programs.	Pt. 250
Part 451 Interrelations of Medical Assistance Programs with other Program Agencies.	Pt. 251
Part 452 Medical Assistance Programs: Related Responsibilities.	Pt. 252

4. Subchapter D—Professional Standards Review. This subchapter contains regulations transferred today from 42 CFR Part 101 and redesignated as follows:

New	Old
Title 42, Chapter IV Health Care Financing Administration, Subchapter D Professional Standards Review.	Part 101
Part 460 PSRO Area Designations.	Subpart A
Part 461 Notification and Polling of Physicians.	Subpart B
Part 462—Part 472 (Reserved).	Subpart C—
Part 473 Hearings and Appeals on PSRO Determinations.	Subpart M
Part 474—Part 479 (Reserved).	Subpart O—
Part 480 Advisory Groups to PSRO's.	Subpart U

(Sec. 1102, 49 Stat. 647 (42 U.S.C. 1302).)

(Catalog of Federal Domestic Assistance Program Nos. 13.800, Health Insurance for the Aged—Hospital Insurance; No. 13.801, Health Insurance for the Aged—Supplementary Medical Insurance; No. 13.714, Medical Assistance Program.)

NOTE: The Health Care Financing Administration has determined that this regulation does not require preparation of an economic impact statement under Executive Order 11821, as amended by Executive Order 11949, and OMB Circular A-107.

Dated: September 13, 1977.

ROBERT A. DERZON,  
Administrator, Health Care  
Financing Administration.

Approved: September 26, 1977.

JOSEPH A. CALIFANO, Jr.,  
Secretary.

[FR Doc.77-28725 Filed 9-29-77;8:45 am]

## [ 4110- ]

## Title 45—Public Welfare

CHAPTER II—SOCIAL AND REHABILITATION SERVICE (ASSISTANCE PROGRAMS), DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

PART 246—STATE ORGANIZATION—MEDICAL ASSISTANCE PROGRAMS

PART 248—COVERAGE AND CONDITIONS OF ELIGIBILITY FOR MEDICAL ASSISTANCE

PART 249—SERVICES AND PAYMENT IN MEDICAL ASSISTANCE PROGRAMS

PART 250—ADMINISTRATION OF MEDICAL ASSISTANCE PROGRAMS

PART 251—INTERRELATIONS OF MEDICAL ASSISTANCE PROGRAMS WITH OTHER PROGRAMS OR AGENCIES

PART 252—MEDICAL ASSISTANCE PROGRAMS: RELATED RESPONSIBILITIES

Transfer and Recodification of Medicaid Regulations

AGENCY: Health Care Financing Administration (HCFA), HEW.

ACTION: Final rule.

SUMMARY: This regulation deletes the contents of 45 CFR, Parts 246, 248, 249, 250, 251, and 252 relating to the Medicaid program under title XIX of the Social Security Act. The regulations under these parts are being recodified under a newly created Chapter IV of title 42 of the Code of Federal Regulations, elsewhere in this Part. This recodification will bring together in a single chapter the regulations governing the three major programs of the Health Care Financing Administration (42 FR 13262). The transfer will make the regulations more accessible and preclude confusion that now exists because of codification under

three different chapters under three different titles.

DATE: This regulation is effective on October 1, 1977.

FOR FURTHER INFORMATION CONTACT:

Luisa V. Iglesias, 202-245-0950.

SUPPLEMENTARY INFORMATION: Federal regulations under 45 CFR Parts 201, 204, 205, 206, and 225 continue to apply to Medicaid. These will later be recodified and transferred to the new 42 CFR Chapter IV.

45 CFR is amended by vacating Parts 246, 248, 249, 250, 251 and 252; redesignating their content as Parts 446, 448, 449, 450, 451 and 452 under subchapter C of 42 CFR Chapter IV; and redesignating all sections of each part in accordance with the new part numbers.

(Sec. 1102, 49 Stat. 647 (42 U.S.C. 1302).)

(Catalog of Federal Domestic Assistance Program No. 13.714, Medical Assistance Program.)

NOTE.—The Health Care Financing Administration has determined that this regulation does not require preparation of an economic impact statement under Executive Order 11821, as amended by Executive Order 11949, and OMB Circular A-107.

Dated: September 13, 1977.

ROBERT A. DERZON,  
Administrator, Health Care  
Financing Administration.

Approved: September 26, 1977.

JOSEPH A. CALIFANO, Jr.,  
Secretary.

## DEPARTMENT OF LABOR

Employment Standards Administration  
MINIMUM WAGES FOR FEDERAL AND  
FEDERALLY ASSISTED CONSTRUCTION  
General Wage Determination Decisions

General Wage Determination Decisions of the Secretary of Labor specify, in accordance with applicable law and on the basis of information available to the Department of Labor from its study of local wage conditions and from other sources, the basic hourly wage rates and fringe benefit payments which are determined to be prevailing for the described classes of laborers and mechanics employed in construction activity of the character and in the localities specified therein.

The determinations in these decisions of such prevailing rates and fringe benefits have been made by authority of the Secretary of Labor pursuant to the provisions of the Davis-Bacon Act of March 3, 1931, as amended (46 Stat. 1494, as amended, 40 U.S.C. 276a) and of other Federal statutes referred to in 29 CFR 1.1 (including the statutes listed at 36 FR 306 following Secretary of Labor's Order No. 24-70) containing provisions for the payment of wages which are dependent upon determination by the Secretary of Labor under the Davis-Bacon Act; and pursuant to the provisions of Part 1 of Subtitle A of Title 29 of Code of Federal Regulations, Procedure for Predetermination of Wage Rates, (37 FR 21138) and of Secretary of Labor's Orders 12-71 and 15-71 (36 FR 8755, 8756). The prevailing rates and fringe benefits determined in these decisions shall, in accordance with the provisions of the foregoing statutes, constitute the minimum wages payable on Federal and federally assisted construction projects to laborers and mechanics of the specified classes engaged on contract work of the character and in the localities described therein.

Good cause is hereby found for not utilizing notice and public procedure thereon prior to the issuance of these determinations as prescribed in 5 U.S.C. 553 and not providing for delay in effective date as prescribed in that section, because the necessity to issue construction industry wage determination frequently and in large volume causes procedures to be impractical and contrary to the public interest.

General Wage Determination Decisions are effective from their date of publication in the FEDERAL REGISTER without limitation as to time and are to be used in accordance with the provisions of 29 CFR Parts 1 and 5. Accordingly, the applicable decision together with any modifications issued subsequent to its publication date shall be made a part of every contract for performance of the described work within the geographic area indicated as required by an applicable Federal prevailing wage law and 29 CFR, Part 5. The wage rates contained therein shall be the minimum paid under such contract by contractors and subcontractors on the work.

## MODIFICATIONS AND SUPERSEDEAS DECISIONS TO GENERAL WAGE DETERMINATION DECISIONS

Modifications and Supersedeas Decisions to General Wage Determination Decisions are based upon information obtained concerning changes in prevailing hourly wage rates and fringe benefit payments since the decisions were issued.

The determinations of prevailing rates and fringe benefits made in the Modifications and Supersedeas Decisions have been made by authority of the Secretary of Labor pursuant to the provisions of the Davis-Bacon Act of March 3, 1931, as amended (46 Stat. 1494, as amended, 40 U.S.C. 276a) and of other Federal statutes referred to in 29 CFR 1.1 (including the statutes listed at 36 FR 306 following Secretary of Labor's Order No. 24-70) containing provisions for the payment of wages which are dependent upon determination by the Secretary of Labor under the Davis-Bacon Act; and pursuant to the provisions of Part 1 of Subtitle A of Title 29 of Code of Federal Regulations, Procedure for Predetermination of Wage Rates (37 FR 21138) and of Secretary of Labor's Orders 13-71 and 15-71 (36 FR 8755, 8756). The prevailing rates and fringe benefits determined in foregoing General Wage Determination Decisions, as hereby modified, and/or superseded shall, in accordance with the provisions of the foregoing statutes, constitute the minimum wages payable on Federal and federally assisted construction projects to laborers and mechanics of the specified classes engaged in contract work of the character and in the localities described therein.

Modifications and Supersedeas Decisions are effective from their date of publication in the FEDERAL REGISTER without limitation as to time and are to be used in accordance with the provisions of 29 CFR Parts 1 and 5.

Any person, organization, or governmental agency having an interest in the wages determined as prevailing is encouraged to submit wage rate information for consideration by the Department. Further information and self-explanatory forms for the purpose of submitting this data may be obtained by writing to the U.S. Department of Labor, Employment Standards Administration, Office of Special Wage Standards, Division of Wage Determinations, Washington, D.C. 20210. The cause for not utilizing the rule-making procedures prescribed in 5 U.S.C. 553 has been set forth in the original General Wage Determination Decision.

## NOTICE

*Effective Immediately.* Due to the cost of publication involved, the Department of Labor will no longer publish the monthly index to general Wage Determination Decisions and Modifications. All users of general wage determination decisions are cautioned to consult the lists of new decisions, modifications, supersedeas decisions, and cancellations published each week in the preamble to the published prevailing wage rates to determine if there have been any changes in the wage determination decisions applicable to their programs.

Signed at Washington, D.C., this 23rd day of September 1977.

RAY J. DOLAN,  
Assistant Administrator,  
Wage and Hour Division.

GROUP VII

Locomotive engineer, boring machine, tug boat, mixer, 18 cu. ft. and over, sand barge, dredging machine, tugger, hoist - when operating one drum, welding machine, 3 to 6, air compressor, 3 to 5, 500 cu. ft. & under, air compressor, over 500 cu. ft. (1) pump, battery, 3 to 6, fork-lift, bobcat and similar equipment, generator plant engineer, diesel elec., winch truck with A-frame, roller, all types, outside elevator or building type of personnel, hoist, concrete buster or tamper, heaters under jurisdiction of Operating Engineers, fireman, boiler operator, crushing plants, oiler distributor, pulverizer, farmer tractor with or without attachments, batch plant operator (portable), conveyor-operator dual, continuous or belt bulk handling, screed operator, concrete pump, form grader, screening plant, well point pump operator, signal man on large wharfs when and if required, operator for rotary drilling machines when operated from console or machines -- Engineers for machines not listed under the above classifications shall receive the scale comparable to those classifications

GROUP VIII

Greaser, tilt top trailer operator

GROUP IX

Permanent elevator - building type (automatic), concrete mixer, with hopper less than 18 cu. ft., air compressor, 500 cu. ft., and under (1 or 2), welding machine (1 or 2) pump (1 or 2), fuelman, conveyor operator-single-continuous belt bulk handling

GROUP X

Asphalt lay machine back end man, mechanic helper and welder helper

GROUP XI

Truck crane oiler driver or track crane oiler

POWER EQUIPMENT OPERATORS

Group 1: Batch Plant Operator; Batch and Mixer, 200 yards per hour and under; Loaders; Elevating - Achey, Barber Greene and similar types; Overhead and front-end, under 24 yards; Mixers; Concrete Mixers and Batch, 200 yards per hour and under; Pumps; Fuller Kenyon, Pompeette and Concrete, Rollers, Tampers and Vibrators; on Plant or Road Mix materials; Tractor, Farmall types, 50 h.p. and over; Trenching Machines, under 16 inches

Group 2: Batch Plant Operator; Batch and Mixers, over 200 yards; Derricks, all; Drilling Machines, Core, Cable Rotary and Exploration; Mixers; Mobile type with hoist combination; Mucking Machines, Mole, Tunnel Drill and/or Shield

Group 3: Brooms, Power Wayne, Saginaw and similar types; Bulldozers, under D6 or similar; Post Mole Diggers, mechanical; Saw, Concrete; Scrapers; Carryall type, single; Model Sno-cat

Group 4: Bulldozers: D6 through D9 or similar; Bump Cutter (Concut Christensen or similar types); Conveyors

Group 5: Bulldozers: TC 12, Quad 9, Pay Dozers, Linked Pusher, R.D. 41 and/or similar; Bulldozers engaged in Yo Operation; Cableways and Highlines, 3 yards and under; Cranes: "A" Frame Trucks, Deck Winches, single power drum; "A" Frame Trucks; Helicopter; Deck Winches (double power drum); Crawler, truck type, Floating Locomotive, Whirley, either 3 yards and under or 150 boom including jibs and under 45 tons and under; Hydraulic or Transporter, Hystar Cat Cranes and attachments, Sidebooms 45 tons and under; Fork Lifts with power broom and wing attachment; Loaders: Overhead and front-end, 24 yards and under 4 yards; Motor Patrol Graders: Over Model 14 or similar types; Piledriver Engineers, L. B. Foster Puller or similar paving breaker; Power Plant Turbine Operators; 300 K.W. on highway or airfield construction projects or Quarry operators; Saunman-Bagley; Shovels: Crawler and truck type, all attachments, 3 yards and under; Sub Grader (Gardner, C.M.I. and similar types); Tractors, Farmall type, used as Vechoses, Rubber-tired (Ford, Ferguson, Case and similar types); Tournapulls; Caterpillar, Euclid Scrapers and similar type equipment, over 25 yards through 40 yards; Hoyer Crafts, Flex Craft, Helicopter; Cable Car, Boat Coxswain

POWER EQUIPMENT OPERATORS (Cont'd)

Group 6: Cableways and Highways, over 3 yards; Cranes: Crawler, truck type, Floating, Locomotive, Whirley, either over 3 yards and under 6 yards, over 150' boom, including jibs or over 45 tons; Tower Cranes, Pecco, Lorraine, Bucyrus and similar types; Hystar Cat Cranes and attachments, Sidebooms over 45 tons through 100 tons; Loaders: Overhead and front-end, 4 yards up to and including 10 yards; Shovels, Crawler and truck type, all attachments, 3 yards and under 6 yards; Tournapulls, Caterpillar, Euclid Scrapers and similar type equipment over 40 yards through 55 yards; Slip Form Paver, C.M.I. and similar types

Group 7: Cement Hogs; Locomotives: Rod and Geared Engines

Group 8: Compressors: Excavating; Locomotives—Dinkey (air, steam, gas, and electric) Speeders

Group 9: Compressors: Steel Erection Including Sandblasting, Painting or same, Pile Driving, Hoists on Steel Erection (Towers, Mobiles and Air Tuggers); Loaders: Fork Lifts with tower; Scrapers: Carryall, Tandem

Group 10: Conveyors, Beltcrates with power pack and similar; Loaders: Elevating Belt type, Euclid and similar types

Group 11: Cranes: "A" Frame Trucks, Deck Winches, single power drum; Crushers, rock, washing and screening plants; Moist Air Puffers, Elevators; Motor Patrol Graders; Model 14 or similar types and under; Power Plant Turbine Operators: under 300 K.W.; Shovels; Tournapulls, Caterpillar, Euclid, Scrapers and similar type equipment 25 yards and under

Group 12: Cranes: Crawler, truck type, Floating, Locomotive, Whirley, either 6 yards or over, or over 200' of boom including jibs or over 150 tons; Hystar Cat Cranes and attachments, Sidebooms over 100 tons; Loaders: Overhead and front-end, over 10 yards; Shovels: Crawler and truck type, all attachments, 6 yards and over; Tournapulls, Caterpillar, Euclid, Scrapers and similar type equipment over 55 yards through 70 yards

Group 13: Pile Driving Machine Operator, Concrete Paving, Sidewalk Curb and Gutter Machine; Screen Man or Slurry Operator; Spreaders - Blaw Knox, Cedarapids, Barber Greene, Railroad Wing Spreader or similar types

Group 14: Loaders: Elevating Grader type, Dumor and similar types

Group 15: Loaders: Fork Lifts or Lumber Carrier (on construction job site)

POWER EQUIPMENT OPERATORS (Cont'd)

- Group 16: Mechanics, Welders, Machinists, heavy duty
- Group 17: Mechanic; Leadman
- Group 18: Mechanics' Helpers, heavy duty (shop)
- Group 19: Mechanic, light duty; Rollers, Tampers and Vibrators; Other than plants or road mix (where towed, to pay rate or equipment used to pull); Tractors, Farmall type less than 50 h.p.
- Group 20: Mixers, Asphalt Mixer
- Group 21: Oil, Blower Distributors
- Group 22: Grade Checkers - Oiler combination); Safety Observer or Oiler Rigger
- Group 23: Journeyman Equipment Service Oilers and Fireman; Oiler, either over 3 yards to over 150' boom or over 45 tons
- Group 24: Pumps; Watara
- Group 25: Tournapulla, Caterpillar, Euclid Scrapers and similar types equipment over 70 yards through 85 yards
- Group 26: Tournapulla, Caterpillar, Euclid Scrapers and similar type equipment, over 85 yards through 100 yards
- Group 27: Trenching Machines: 16 inches and over or Remote controlled underwater trenching
- Group 1: Assistant Mate (Deckhand)
- Group 2: Fireman; Oiler
- Group 3: Assistant Engineer (electric, diesel, steam of booster pumps); Mates and Boatmen
- Group 4: Engineer Welder; Crane-man
- Group 5: Assistant Engineer (electric generator operator for primary pump, power barge, or dredge)
- Group 6: Leverman, Hydraulic
- Group 7: Leverman, Dipper

FEDERAL REGISTER, VOL. 42, NO. 190—FRIDAY, SEPTEMBER 30, 1977

POWER EQUIPMENT OPERATORS  
(AREAS I and II)

Group 1: Assistants to Engineers (Brakeman; Fireman; Heavy Duty Repairman Helper; Oiler; Deckhand; Signalman; Switchman; Tar Pot Fireman); Partisan (Heavy Duty Repair shop parts room)

Group 2: Compressor Operator; Concrete Mixer (up to and including 1 yard); Conveyor Belt Operator (tunnel); Fireman Hot Plant; Hydraulic; Monitor; Mechanical Conveyor (handling building materials); Mixer Box Operator (concrete plant); Pump Operator; Spreader Boxman (with spread); Tar Pot Fireman (power agitated)

Group 3: Box Operator (bunker); Helicopter Radioman (Signalman); Locomotive (30 tons or under); Motorman; Rodman or Chainman; Ross Carrier (construction jobsite); Motomist; Screedman (except asphaltic concrete paving); Self-propelled, automatically applied concrete-curing machine (on streets, highways, airports and canals); Trenching Machine, 4 ft. depth; Truck Crane Oiler; Tugger Hoist; Single drum; Boiler Tender

Group 4: Ballast Jack Tamper; Ballast Regulator; Ballast Tamper Multi-purpose; Boxman (asphalt plant); Elevator Operator (in-sider); Fork Lift or Lumber Stacker (construction job site); Line Haster; Material Hoist (1 drum); Shuttlecar; Tie Spacer; Towermobile

Group 5: Compressor Operator (over 2); Concrete Mixers (over 1 yard); Concrete Pumps or Pumpcrete Guns; Generators; Grouting Machines; Press-weld (air-operated); Pumps (over 2); Welding Machines (powered other than by electricity)

Group 6: BUL Lima Road Factor or similar; Boom Truck or Dual Purpose A-Frame Truck; Concrete Batch Plants (wet or dry); Concrete Saws (self-propelled unit) on streets, highways, airports and canals; Drilling and Boring Machinery, vertical (not to apply to waterliners, wagon drills or jackhammers); Highline Cableway Signalman; Locomotives (steam or over 30 ton); Lubrication and Service Engineer (mobile and grease rack); Magline Internal Full Slab Vibrator (on airports, highways, canals and warehouses); Mechanical Finishers (concrete) (Clay; Johnson; Bidwell Bridge Deck or similar types); Mechanical Burn Curb and/or Curb and Gutter Machine, concrete or asphalt; Portable Crushers; Post Driver (M300 and similar); Power Jumbo Operator (setting slip-forms, etc., in tunnels); Roller (except asphalt); Screedman (Barber-Greene and similar) (asphaltic concrete paving); Self-propelled Compactor (single engine); Self-propelled Pipeline Wrapping Machine (perault CRC or similar type); Self-propelled Power Sweeper; Self-propelled Tape Machine; Slip Form Pumps (lifting device for concrete form); Small rubber-tired tractors; Surface Heaters; Auger-type drilling equipment up to and including 39 ft. depth

POWER EQUIPMENT OPERATORS (Cont'd)  
(AREAS I and II) (Cont'd)

Group 7: Concrete Conveyor or Concrete Pump, Truck or Equipment mounted (boom length to apply); Concrete conveyor; building site; Deck Engineers; Drilling and Boring Machinery, horizontal (not to apply to waterliners, wagon drills or jackhammers); Dual Drum Mixer; Fuller Kenyon Pump and similar types; Gantry Rider (or similar equipment); Hydro-Hammer or similar; Instrument Man; Material Hoist (2 or more drums); Mechanical Finishers or Spreader Machine (asphalt, Barber-Greene and similar); Mine or Shaft Hoist; Mixermobile; Pavement Breaker with or without Compressor Combination; Pavement Breaker, truck mounted with Compressor Combination; Pipe Bending Machine (pipe-line only); Pipe-Cleaning Machine (tractor propelled and supported); Pipe Wrapping Machine (tractor propelled and supported); Refrigeration Plant; Roller Operator (finish asphalt); Self-propelled boom type lifting device (center mount) (10 tons or less M.K.C.); Self-propelled Elevating Grade Plane; Slusher Operator; Small Tractor (with boom); Soil Tester; Truck type Loader; Auger-type drilling equipment over 30 ft. depth

Group 8: Armor-Coater (or similar); Asphalt Plant Engineer; Cast-in-Place Pipe Laying Machine; Combination Slusher and Motor Operator; Concrete Batch Plant (multiple units); Dozer; Heading Shield Operator; Heavy Duty Repairman and/or Welder; Gradesetter; Grade Checker (mechanical or other-wise); Grooving and Grinding Machines (highways); Ken Seal Machine (or similar); Kolman Loader; Loader (up to 2 yards); Mechanical Trench Shield; Portable Crushing and Screening Plants; Push Cat; Rubber Tired Earth-boring Equipment (up to and including 45 cu. yds. "struck" m.r.c.); Bucilda, T-Pulls, B&L, 10, 21, and similar; Rubber Tired Dozer; Self-propelled Compactor with Dozer; Sheepfoot; Timber Skidder (rubber tired or similar equipment); Tractor drawn Scraper; Tractor; Trenching Machine over 4 ft. depth; Tri-batch Paver; Tunnel Mole Boring Machine; Welder; Woods-mixer (and other similar Pugmill equipment); Vermeer T-600 B Rock Cutter

Group 9: Chicago Boom; Combination Mixer and Compressor (gunite); Combination Slurry Mixer and/or Cleaner; Highline Cableway (5 tons and under); Lull Hi-lift or similar (20 ft. or over); Mucking Machine (rubber tired, rail or track type); Tractor (with boom) (D-6 or larger and similar)

## NOTICES

FEDERAL REGISTER, VOL. 42, NO. 190—FRIDAY, SEPTEMBER 30, 1977

POWER EQUIPMENT OPERATORS (Cont'd)  
(AREAS I and II) (Cont'd)

Group 10; Boom-type Backfilling Machine; Bridge Crane; Carry-lift (or similar); Chemical Grouting Machine, truck mounted; Combination Backhoe and Loader (up to and including 3/4 cu. yd. m.r.c.); Derrick Barges operators required when using engine remote from hoist); Derrick Barges (except excavation work); Do-More Loader and Adams Elevator; Elevating Grader Heavy Duty Rotary Drill Rig (including Caisson Foundation work and Euclid Loader and similar type; Robbins Type Drills); Roaming Scooper (or similar); Lift Slab Machine; (Vegborg and similar types); Loader (2 yards up to and including 4 yards); Locomotive (over 100 tons) (single or multiple units); Multiple Engine Earthmoving Machine (Euclids, Dozers, etc.) (no tandem scraper); Pre-stress Wire Wrapping Machine; Reservoir-Debris Tug (self-propelled floating); Rubber-tired Scraper, self-loading (peddle wheel twin engine); Shuttle Car (reclaim station); Single Engine Scraper over 45 yards; Soil Stabilizer (P & H or equal); Sub-grader (Curtiss or other automatic type); Tractor, Compressor Drill Combination; Track Laying type earth moving machine (single engine with tandem scrapers); Train loading station; Trenching Machine, multi-engine with sloping attachment, Jasco or similar; Vacuum Cooling Plant; Whirley Crane (up to and including 25 tons)

Group 10-A; Backhoe (hydraulic) (up to and including 1 cu. yd. m.r.c.); Backhoe (cable) (up to and including 1 cu. yd. m.r.c.); Continuous Combination Backhoe and Loader over 3/4 cu. yd. m.r.c.); Continuous Flight Tie Back Auger (up to and including 1 cu. yd.) (Crane attached); Cranes (not over 25 tons, Hammerhead and Gantry); Grade-alls (up to and including 1 cu. yd.); Power Shovels, Clamshells, Draglines, (up to and including 1 cu. yd. m.r.c.); Power Blade (single engine); Self-propelled Boom-type Lifting Device (center mount) (over 10 tons); Rubber-tired Scraper, self-loading (peddle wheel twin engine); OM dual Lane Auto Grader SP30 or similar

Group 11; Automatic Concrete Slip Form Paver; Automatic Railroad Car Dumper; Canal Trimmer; Canal Trimmer w/ditching attachments; Cranes (over 25 tons up to and including 125 tons); Continuous Flight Tie Back Auger over 1 cu. yd. (including crane); Drott Travelift 630-A-1 or similar (45 tons or over); Euclid Loader when controlled from the pulicat; Highline Cableway (over 5 tons); Loader (over 4 yards, up to and including 12 cu. yds.); Miller Foreless M900 Slope Paver or similar; Power Blade (multi-engine); Power Shovels, Clamshells, Draglines, Backhoe, Grade-alls (over 1 yd. and up to and including 7 cu. yds. m.r.c.); rubber-tired earth moving machines (multiple propulsion power units and two or more scrapers) (up to and including 75 cu. yds. "struck" m.r.c.); Self-propelled Compactor (with multiple propulsion power units); Single engine Rubber-tired Earthmoving Machines (with tandem scrapers); Slip Form Paver (concrete or asphalt); Tandem Cats; Tower Cranes Mobile Including rail mounted; Trencher (pulling attached shield); Universal Limber and Tower Cranes (and similar types); Wheel Excavator (up to and including 750 cu. yd. per hour); Whirley Crane (over 25 tons)

NOTICES

POWER EQUIPMENT OPERATORS (Cont'd)  
(AREAS I and II) (Cont'd)

Group 11-A; Band Wagons (in conjunction with Wheel Excavator); Cranes (over 125 tons); Loader (over 12 cu. yds. up to and including 18 cu. yds.); Power Shovels and Draglines (over 7 cu. yds. m.r.c.); Rubber Tired Multi-purpose Earth Moving Machines (2 units over 75 cu. yds. "struck" m.r.c.); Wheel Excavator (over 750 cu. yds. per hour)

Group 11-B; Loader (over 18 cu. yds.)

Group 11-C; Operator of Helicopter (when used in aerection work); Remote Controlled Earthmoving Equipment

BULK CEMENT SPREADER (w/o auger, under 4 yds. water level); Bus or Manual driver; Concrete pump machine; Concrete pump truck (when flat rack truck is used appropriate flat rack rate shall apply); Dump (under 4 yds. water level); Dumpcrete truck (under 4 yds. water level); Dumpster (under 4 yds. water level); Escort or pilot car driver; Nipper truck (when flat rack truck is used appropriate flat rack rate shall apply); Pickup; Skids (debris box, under 4 yds. water level); Team drivers; Trucks (dry per-batch concrete mix, under 4 yds. water level); Helpers; Warehousemen	Fringe Benefits Payments				Education and/or Appr. (Areas I and II)

Group 1: Assistants to Engineers (Brakeman; Fireman; Heavy Duty Repairman; Belper; Oiler; Deckhand; Signman); Switchman; Tar Pot Fireman; Partman (Heavy Duty Repair shop parts room)

Group 2: Compressor Operator; Concrete Mixer (up to and including 1 yard); Conveyor Belt Operator (tunnel); Fireman Hot Plant; Hydraulic; Monitor; Mechanical Conveyor (handling building materials); Mixer Box Operator (concrete plant); Pump Operator; Spreader Woman (with screed); Tar Pot Fireman (power agitated)

Group 3: Box Operator (bunker); Helicopter Radioman (Signalman); Locomotive (30 tons or under); Motorman; Rodman or Chainman; Rose Carrier (construction jobsite); Rotomast; Screedman (except asphaltic concrete paving); Self-propelled, automatically applied concrete curing machine (on streets, highways, airports and canals); Trenching Machine, 4 ft. depth; Truck Crane Oiler; Tugger Hoist, single drum; Boiler Tender

Group 4: Ballast Jack Taper; Ballast Regulator; Ballast Taper Multi-purpose; Roman (asphalt plant); Elevator Operator (inside); Fork Lift or Lumber Stacker (construction job site); Line Master; Material Hoist (1 drum); Shuttlecar; Tie Spacer; Towermobile

Group 5: Compressor Operator (over 2); Concrete Mixers (over 1 yard); Concrete Pumps or Pumpcrete Guns; Generators; Grouting Machines; Press-weld (air-operated); Pumps (over 2); Welding Machines (powered other than by electricity)

Group 6: BLE Lima Road Pactor or similar; Boom Truck or Dual Purpose A-Frame Truck; Concrete Batch Plants (wet or dry); Concrete Saws (self-propelled unit) on streets, highways, airports and canals; Drilling and Boring Machinery, vertical (not to apply to waterliners, wagon drills or jackhammers); Rightline Cableway Signman; Locomotives (steam or over 30 ton); Lubrication and Service Engineer (mobile and grease-truck); Maginnis Internal Pull Slab Vibrator (on airports, highways, canals and warehouses); Mechanical Finishers (concrete) (Clary, Johnson, Bidwell Bridge Deck or similar types); Mechanical Burn Curb and/or Curb and Driver (M300 and similar); Power Jumbo Operator (setting slip-forms, etc., in tunnels); Roller (except asphalt); Screedman (Barber-Greene and similar) (asphaltic concrete paving); Self-propelled Compactor (single engine); Self-propelled Pipeline Wrapping Machine (percut CMC or similar type); Self-propelled Power Sweeper; Self-propelled Tape Machine; Slip Form Pumps (lifting device for concrete forms); Small rubber-tired tractors; Surface Basters; Auger-type drilling equipment up to and including 39 ft. depth

POWER EQUIPMENT OPERATORS (Cont'd)  
(AREAST I and II) (Cont'd)

**Group 7:** Concrete Conveyor or Concrete Pump, Truck or Equipment mounted (boom length to apply); Concrete conveyor; building site; Deck Engineers; Drilling and Boring Machinery; horizontal (not to apply to waterliners, wagon drills or jackhammers); Dual Drum Mixer; Fuller Kenyon Pump and similar types; Gantry Rider (or similar equipment); Hydro-Hammer or similar; Instrument Man; Material Hoist (2 or more drums); Mechanical Finishers or Spreader Machine (asphalt, Barber-green and similar); Mine or Shaft Hoist; Micromobile; Pavement Breaker with or without Compressor Combination; Pavement Breaker, truck mounted with Compressor Combination; Pipe Bending Machine (pipe-lines only); Pipe Cleaning Machine (tractor propelled and supported); Pipe Wrapping Machine (tractor propelled and supported); Refrigeration Plant; Roller Operator (finish asphalt); Self-propelled boom type lifting device (center mount) (10 tons or less M.R.C.); Self-propelled Elevating Grade Plane; Slusher Operator; Small Tractor (with boom); Soil Tester; Truck type Loader; Auger-type drilling equipment over 30 ft depth

Group 8: Armor-Coater (or similar); Asphalt Plant Engineer; Cast-In-Place Pipe Laying Machine; Combination Slusher and Motor Operator; Concrete Batch Plant (multiple units); Dozer; Heading Shield Operator; Heavy Duty Repairman and/or Welder; Grader/Setter, Grade Checker (mechanical or w/elec); Grooving and Grinding Machines (highways); Ken Seal Machine (or similar); Kolman Loader; Loader (up to 2 yds); Mechanical Trench Shield; Portable Crushing and Screening Plants; Push Cat; Rubber Tired Earth-moving Equipment (up to and including 45 cu. yds. "struck" m.r.c.); Euclid, D-Pulls, Dw-10, 2L, and similar; Rubber Tired Dozer; Self-propelled Compactor with Dozer; Sheepfoot; Timber Skidder (rubber tired or similar equipment); Tractor drawn Scraper; Tractor; Trenching Machine over 4 ft. depth; Tri-batch Paver; Tunnel Mole Boring Machine; Welder; Woods-mixer (and other similar pugmill equipment); Vermeer T-600 B Rock Cutter

Group 9: Chicago Boom; Combination Mixer and Compressor (unitel); Combination Slurry Mixer and/or Cleaner; Highline Cableway (5 tons and under); Lull HX-lift or similar (20 ft. or over); Mucking Machine (rubber tired, rail or track type); Tractor (with boom) (8-6 or larger and similar).

POWER EQUIPMENT OPERATORS (Cont'd)  
(AREAS I and II) (Cont'd)

Group 10: Boom-type Backfilling Machine; Bridge Crane; Cargy-lift (or similar); Chemical Grouting Machine, truck mounted; Combination Backhoe and Loader (up to and including 3/4 cu. yd. m.f.c.); Derrick (2 operators required when using engine remote from hoist); Derrick Barges (except excavation work); Do-More Loader and Adams Zigzagder; Elevating Grader Heavy Duty Rotary Drill Rig (including Caisson Foundation work and similar); Euclid Loader and similar type (Robbing type Drills); Koehring Scooper (or similar); Lift Slab Machine; (Wagtborg and similar types); Loader (2 yards up to and including 4 yards); Locomotive (over 100 tons) (single or multiple units); Multiple Engine Earthmoving Machine (Euclid, Dozers, etc.) (no tandem scrapers); Pre-stress Wire Wrapping Machine; Reservoir-Debris Tug (self-propelled floating); Rubber-tired Scraper, self-loading (paddle wheels, etc.); Shuttle Car (reclaim station); Single Engine Scraper over 45 yards; Soil Stabilizer (P & H or equal); Sub-grader (Gurries or other automatic type); Tractor, Compressor Drill Combination; Track Laying type earth moving machine (single engine with tandem scrapers); Train loading station; Trenching Machine, multi-engine with sloping attachment, Jafco or similar; Vacuum Cooling Plant; Whirley Crane (up to and including 25 tons)

Group 10-A: Backhoe (hydraulic) (up to and including 1 cu. yd. m/c); Backhoe (cable) (up to and including 1 cu. yd. m/c); Backhoe (cable) (over 1 cu. yd. m/c); Continuous Flight Auger (up to and including 1 cu. yd.); Crane attached; Pallet Fork Loader (up to and including 1 cu. yd.); Crane (not over 25 tons Bamehall and Gantry); Grade-alls (up to and including 1 cu. yd.); Power Shovels, Clamshells, Draglines, (up to and including 1 cu. yd. m/c); Power Blade (single engine); Self-propelled Boom-type Lifting device (center mount) (over 10 tons); Rubber-tired Scraper; self-loading (paddle wheel twin engine); CMI dual Lane Auto Grader SP30 or similar

Group 11; Automatic Concrete Slip Form Paver; Automatic Railroad Car Dumper; Canal Trimmer; Canal Trimmer w/ditching attachments; Cranes (over 25 tons up to and including 125 tons); Continuous Flight Tie Back Auger over 1 cu. yd. (including crane); Drott Traveller 650-A-1 or similar (45 tons or over); Euclid Loader when controlled from the pulper; Highline Cableway (over 5 tons); Loader (over 4 yards, up to and including 12 cu. yd.); Miller Formless 9500 Slope Paver or similar; Power Blade (multi-engine); Power Shovels, Cramshaws, Draglines, Backhoes, Grade-a-lia (up to 1 yd. and up to and including 7 cu. yd. m.r.c.); rubber-tired earth moving machines (multiple propulsion power units and two or more scrapers) (up to and including 75 cu. yd. "struck" m.r.c.); Self-propelled Compactor (with multiple propulsion power units); Single engine Rubber-tired Earthmoving Machines (with tandem scrapers); Slip Form Paver (concrete or asphalt); Tandem Cat; Tower Cranes Mobile (including rail mounted); Trencher (pulling attached shield); Universal Liebherr and Tower Cranes (and similar types); Wheel Excavator (up to and including 75 cu. yd. per hour); Whiskey Crane (over 25 tons)

POWER EQUIPMENT OPERATORS (Cont'd)  
(AREAS I and II) (Cont'd)

11-A: Band Wagons (in conjunction with Wheel Excavator); Crane  
er 125 tons); Loader (over 12 cu. yds., up to and including 18 cu.  
); Power Shovels and Draglines (over 7 cu. yds. m.r.c.); Rubber  
ed Multi-purpose Earth Moving Machines (2 units over 75 cu. yds.  
truck" m.r.c.); Wheel Excavator (over 750 cu. yds. per hour)

11-B: Loader (over 18 cu. yds.)

11-C: Operator of Helicopter (when used in erection work);  
Remote Controlled Earthmoving Equipment

## TRUCK DRIVERS

<p>BULK CEMENT SPREADER (w/w/o auger, under 4 yds. water level); Bus or Manhaul driver; Concrete-pump machine; Concrete pump truck (when flat rack truck is used appropriate flat rack rate shall apply); Dump (under 4 yds. water level); Dumpcrete truck (under 4 yds. water level); Excort or pilot car driver; Nipper truck (when flat rack truck is used appropriate flat rack rate shall apply); Pickups; Skids (debris box, under 4 yds. water level); Team drivers; Trucks (dry pre-batch concrete mix, under 4 yds. water level); Helpers; Warehousemen</p>	\$ 9.905	\$ 1.195	.70	\$1.00
<p>BULK CEMENT SPREADER (w/w/o auger, 4 yds. and under 6 yds. water level); Dump (4 yds. and under 6 yds. water level); Dumpcrete (4 yds. and under 6 yds. water level); Dumpster (4 yds. and under 6 yds. water level); Skids (debris box 4 yds. and under 6 yds. water level); Single unit flat rack (2 axle unit); Industrial Lift Truck (mechanical tailgate) Trucks (dry pre-batch concrete mix, 4 yds. and under 6 yds. water level)</p>	10.00	1.195	.70	1.00
<p>JETTING TRUCK and WATER TRUCK (under 2,500 gallons)</p>	10.015	1.195	.70	1.00

TRUCK DRIVERS: (Cont'd)	Basic Hourly Rates	Fringe Benefits Payments				Education and/or Appr. Tr.
		H & W	Pensions	Vacation		
LIFT JYNIES, Fork Lift	\$ 10.035	\$ 1.195	.70	\$ 1.00		
TRANSIT MIX, AGITATOR (under 6 yds.)	10.055	1.195	.70	1.00		
TRUCK REPAIRMAN HELPER	10.075	1.195	.70	1.00		
VACUUM TRUCK under (3,500 gallons)	10.085	1.195	.70	1.00		
SCISSOR TRUCK: Single unit flat rack (3 axle unit); Industrial Lift Truck (mechanical tailgate); Small rubber tired tractor (when used within teamsters' jurisdiction)	10.10	1.195	.70	1.00		
JETTING TRUCK & WATER TRUCK (2,500 gals. under 4,000 gals.)	10.115	1.195	.70	1.00		
COMBINATION WINCH TRUCK WITH HOIST; Transit, Mix Agitator (6 yds. and under 8 yds.)	10.155	1.195	.70	1.00		
VACUUM TRUCK (3,500 gals. and under 5,500 gals.)	10.165	1.195	.70	1.00		
RUBBER-TIRED MUCK CAR (not self-loaded)	10.175	1.195	.70	1.00		

BULK CEMENT SPREADER (w/wo auger, 6 yds. and under 8 yds. water level); Dump (6 yds. and under 8 yds. water level); Dumpcrete (6 yds. and under 8 yds. water level); Dumpster (6 yds. and under 8 yds. water level); Skids (debris box, 6 yds. and under 8 yds. water level); Trucks (dry pre-batch concrete mix, 6 yds. and under 8 yds. water level)	Basic Hourly Rates	Fringe Benefits Payments				Education and/or Appr. Tr.

\*\*AREA 2: All areas not included within Area 1 as defined below.

\*AREA 1: All areas included in the description defined below which is based upon township and range lines of Areas 1 and 2.

Commencing in the Pacific Ocean on the extension of the Southerly line of Township 19S.  
Thence Easterly along the Southerly line of Township 19S, crossing the Mt. Diablo meridian to the S.W. corner of township 19S, range 6E, Mt. Diablo base line and meridian,  
Thence Southerly to the S.W. corner of township 20S, range 6E,  
Thence Easterly to the S.W. corner of township 20S, range 13E,  
Thence Southerly to the S.W. corner of township 21S, range 13E,  
Thence Easterly to the S.W. corner of township 21S, range 17E,  
Thence Southerly to the S.W. corner of township 22S, range 17E,  
Thence Easterly to the S.E. corner of township 22S, range 17E,  
Thence Southerly to the S.W. corner of township 23S, range 18E,  
Thence Easterly to the S.E. corner of township 23S, range 18E,  
Thence Southerly to the S.W. corner of township 24S, range 19E,  
falling on the Southerly line of Kings County, thence Easterly along the Southerly boundary of Kings County and the Southerly boundary of Tulare County, to the S.E. corner of township 24S, range 20E,  
Thence Northerly to the N.E. corner of township 21S, range 20E,  
Thence Westerly to the N.W. corner of township 21S, range 20E,  
Thence Northerly to the N.E. corner of township 13S, range 20E,  
Thence Westerly to the N.W. corner of township 13S, range 20E,  
Thence Northerly to the N.E. corner of township 11S, range 27E,  
Thence Westerly to the N.W. corner of township 10S, range 26E,  
Thence Northerly to the N.W. corner of township 9S, range 25E,  
Thence Westerly to the N.E. corner of township 8S, range 24E,  
Thence Northerly to the N.E. corner of township 6S, range 23E,  
Thence Westerly to the N.W. corner of township 5S, range 19E,  
Thence Northerly to the N.E. corner of township 5S, range 19E,  
Thence Westerly to the N.W. corner of township 3S, range 18E,  
Thence Northerly to the N.E. corner of township 2S, range 17E,  
Thence Westerly to the N.W. corner of township 2S, range 17E,  
Thence Northerly crossing the Mt. Diablo baseline to the N.E. corner of township 2N, range 16E,  
Thence Westerly to the N.W. corner of township 2N, range 16E,  
Thence Northerly to the N.E. corner of township 3N, range 15E,  
Thence Westerly to the N.W. corner of township 3N, range 15E,  
Thence Northerly to the N.E. corner of township 4N, range 14E,

AREA DEFINITIONS FOR  
POWER EQUIPMENT OPERATORS (cont'd)

\*Area 1 (cont'd):  
Thence Westerly to the N.W. corner of township 4N, range 14E,  
Thence Northerly to the N.E. corner of township 5N, range 13E,  
Thence Westerly to the N.W. corner of township 5N, range 13E,  
Thence Northerly to the N.E. corner of township 10N, range 12E,  
Thence Easterly to the N.E. corner of township 11N, range 14E,  
Thence Northerly to the S.E. corner of township 11N, range 14E,  
Thence Westerly to the N.E. corner of township 15N, range 10E,  
Thence Northerly to the N.E. corner of township 16N, range 11E,  
Thence Easterly to the S.E. corner of township 16N, range 11E,  
Thence Northerly to the N.E. corner of township 17N, range 14E,  
Thence Easterly to the S.E. corner of township 14N, range 13E,  
Thence Southerly to the S.E. corner of township 14N, range 13E,  
Thence Easterly to the S.E. corner of township 13N, range 16E,  
Thence Southerly to the S.W. corner of township 13N, range 16E,  
Thence Southerly to the S.W. corner of township 12N, range 17E,  
Thence Easterly along the Southern line of township 12N to the  
Eastern boundary of the state of California,  
Thence Northerly, thence Northerly along the Eastern boundary  
of the state of California to the N.E. corner of township 17N,  
range 18E,  
Thence Westerly to the N.W. corner of township 17N, range 11E,  
Thence Northerly to the N.E. corner of township 20N, range 10E,  
Thence Westerly to the N.W. corner of township 20N, range 10E,  
Thence Northerly to the N.E. corner of township 21N, range 9E,  
Thence Westerly to the N.W. corner of township 21N, range 9E,

NEW BILLING PROCEDURES FOR AGENCIES

As part of the new billing procedures announced in the FEDERAL REGISTER of August 24, 1977, and to insure that each agency is correctly billed for only its own documents, the Office of the Federal Register requests agencies to insert the proper billing code on all of their documents. The six-digit billing code should be typed or handwritten in ink at the top of the first page on all three copies of documents submitted to the Office of the Federal Register for publication, as follows:

BILLING CODE: 0000-00

The list of agency billing codes assigned by the Government Printing Office follows:

Department	Billing Code	Department	Billing Code
Action	6050-01	Federal Maritime Commission	6730-01
Administrative Conference of the United States	6110-01	Federal Mediation and Conciliation Service	6732-01

DECISION NO. CA77-5093

LABORERS (Cont'd)

Group 3: Asphalt Baker, Luteman, Ironer and Asphalt Spreader Boxes (all types); Buggymobile Man; Concrete Core Cutter, Grinder or Sander; Concrete Cutting Torch; Concrete Saw Man, cutting, scoring old or new concrete; Driller, Jack-hammer, 2-1/2 ft. drill steel or longer; Dri Pak-it Machine; Gas, oil and/or Water Pipeline Wrapper--6" Pipe and over by any method; Inside and out; Hydro Seeder and similar types; Impact Wrench, multi-plate; Kettlemen, Potmen and Men applying asphalt, lay-hold, creosote, lime caustic and similar type materials for ("applying" means applying, dipping, brushing or handling of such materials for pipe wrapping and waterproofing); Operators of Pneumatic, gas, electric tools, Vibrating Machines, Pavement Breakers, Air Blasting, Come-alongs, and similar mechanical tools not separately classified herein; Pipelayer's Backup Man, coating, grouting, making of joints, sealing, caulking, dispoing and including rubber gasket joints, pointing and any and all other services; Rock Slinger; Rotary Scarifier or Multiple Head Concrete Chipping Scarifier; Steel Header-board Man and Guideline Setter; Tampers, Barko, Wacker and similar type; Trenching Machine, hand propelled

Group 4: Cribber, Shorer, Lagging, Sheeting and Trench Bracing, hand-guided Lagging Hammer; Head Rock Slinger; Laser Beam; Oversize Concrete Vibrator Operator, 70 lbs. and over; Pipelayer, including water, sewage, solid, gas or air; Prefabricated Manhole Installer; Sandblaster (Nozzleman), water blasting; Welding in connection with Laborers' work

Group 5: Blasters Powderman--all work of loading holes, placing and blasting of all powder and explosives of whatever type, regardless of method used for such loading and placing; Driller: All power drills, excluding Jack-hammer, whether core, diamond, wagon, track, multiple unit, and any and all types of mechanical drills

- Group 3:
- Group 4:
- Group 5:
- Group 6:
- Group 7:
- Group 8:
- Group 9:

POWER EQUIPMENT OPERATORS

Group 1: Brakeman; Compressor (less than 600 C.R.M.); Engineer; Oiler; Generator; Heavy Duty Repairman; Helper; Pump; Signalman; Switchman

Group 2: Compressor (600 C.R.M. or larger); Concrete Mixer, skip type, Conveyor; Fireman; Hydraulic Pump; Oiler Crusher (asphalt or concrete plant); Plant Operator; Generator, Pump or Compressor; Rotary Drill Helper (oilfield); Skiploader - wheel type up to 3/4 yd. w/o attachments; Solid Field Technician; Tar Pot Fireman; Temporary Heating Plant; Trenching Machine Oiler; Truck Crane Oiler

Group 3: A-Frame or Winch Trucks; Elevator Operator (inalls); Equipment Greaser (rack); Ford Ferguson (with dragtype attachments); Helicopter Radioman (ground); Power Concrete Curing Machine; Power Concrete Saw; Power driver Jumbo Tora Setter; Rosa Carrier (job site); Stationary Pipe Wrapping and Cleaning Machine

Group 4: Asphalt Plant Fireman; Boring Machine; Boxman or Mixerman (asphalt or concrete); Chip Spreading Machine; Concrete Pump (small portable); Bridge type Unloader and Turntable; Blinkey Locomotive or Motorman (up to and including 10 tons); Equipment Greaser (greaser truck); Helicopter Hoist; Highline Cableway Signalman; Hydra-hammer-aero Stomper; Power Sweeper; Roller (compacting); Screed (asphalt or concrete); Trenching Machine (up to 6 ft.)

Group 5: Asphalt Plant Engineer; Backhoe (up to and including 3/4 yd.); Batch Plant; Bit Sharpener; Concrete Joint Machine (conal and similar type); Concrete Planer; Deck Engine; Derrick-man (oilfield type); Drilling Machine Operator (including water wells); Forklift (under 5-ton capacity); Hydrographic Seeder Machine (straw, pulp or seed); Machine Tool Operator; Maginnis Internal Pull Slab Vibrator; Mechanical Finisher (concrete-Clay, concrete or asphalt); Mechanical Finisher (concrete-Clay, Johnson, Bidwell or similar); Pavement Breaker (truck mounted); Road Oil Mixing Machine; Roller (asphalt or finish); Rubber-tired Earth Moving Equipment (single engine, up to and including 25 yds. struck); Self-propelled Tar Pipelining Machine; Slip Form Pump (power-driven hydraulic lifting device for concrete forms); Skiploader (Crawler and wheel type over 3/4 yd. and up to and including 1 1/4 yds.); Stinger Crane (Austin-Western or similar type); Tractor-bulldozer, Rammer Scraper (single engine, up to 100 h.p., flywheel and similar types, up to and including D-5 and similar types); Tugger Hoist 1 drum; Tunnel Locomotive (over 10 and up to and including 30 tons); Welder-general

POWER EQUIPMENT OPERATORS (Cont'd)

Group 6: Asphalt or Concrete Spreading (tamping or finishing); Asphalt Paving Machine (Barber Greene or similar type); Bridge Crane Operator; Cast-in-place Pipe Laying Machine; Combination Mixer and Compressor (gunite work); Compactor, self-propelled; Concrete Mixer - paving; Concrete Pump (truck mounted); Crane Operator up to and including 25 ton capacity (Long-boom pay applicable); Crushing Plant; Drill Doctor; Elevating Grader; Forklift (over 5 tons); Grade Checker; Grade-all; Grouting Machine; Heading Shield; Heavy Duty Repairman; Hoist Operator (Chicago Boom and similar type); Kolan Belt Loader and similar type; Larousseau Blob Compactor or similar type; Lift Mobile; Lift Slab Machine (Vegboro and similar types); Loader (Athey, Euclid, Sierra and similar type); Material Hoist; Mucking Machine (1/4 yd. rubber tired, rail or track type); Pneumatic Concrete Pacing Machine (Hackley-Presswell or similar type); Pneumatic Heading Shield (tunnel); Pumpcrete Gun; Rotary Drill (excluding catson type); Rubber-tired Earth Moving Equipment (single engine-cu. yds. struck); Rubber-tired Earth Moving Equipment (multiple cu. yds. struck); Rubber-tired Earth Moving Equipment (multiple engine, up to and including 25 yds. struck); Rubber-tired Scraper (self-loading-paddle wheel type-John Deere, 1040 and similar single unit); Skiploader (crawler and wheel type-over 1 1/4 yds., up to and including 6 1/4 yds.); Surface Heaters and Planer; Trenching Machine (over 6 ft. depth capacity); Tower Crane; Tractor Compressor Drill Combination; Tractor (any type larger than D-5-100 flywheel h.p. and over, or similar) Bull-doser, Tamper, Scraper and Push Tractor single engine); Tractor (boom attachments); Traveling Pipe Wrapping, Cleaning and Bending Machine; Tunnel Locomotive (over 30 tons); Shovel, Backhoe, Dragline, Climahall (over 3/4 yd. and up to 5 cu. yds. m.r.c.) (Long boom pay applicable); Self-propelled Curb and Gutter Machine

V 4 2 1 0 9 1 2 7 7 UMI

POWER EQUIPMENT OPERATORS (Cont'd)

Group 7: Crane, over 25 ton up to and including 100 tons m.r.c. (long boom pay applicable); Derrick Barge (long boom pay applicable); Dual Drum Mixer; Heavy Duty Repairman-welder Combination; Hoist, Stiff-legs, Guy Derrick or similar type, up to and including 100 tons (long boom pay applicable); Monorail Locomotive (diesel), gas or electric; Motor Patrol-blade Operator (single engine); Multiple Engine Tractor (Euclid and similar type, except quad 9 Cat); Rubber-tired Earth Moving Equipment (single engine, over 50 yds. struck); Rubber-tired Earth Moving Equipment (multiple engine, Euclid, Caterpillar and similar) (over 25 yds. and up to 50 cu. yds. struck); Shovel, Backhoe, Dragline, Clamshell (over 5 cu. yds. m.r.c.); (Long boom pay applicable); Tower Crane Repairman; Tractor Loader (crawler and wheel type over 64 yds.); Welder-certified; Woods Mixer and similar Pugmill Equipment

Group 8: Auto Grader; Automatic Slip Form; Crane-over 100 tons (long boom pay applicable); Hoist-stiff Legs, Guy Derrick or similar types (capable of hoisting 100 tons or more) (long boom pay applicable); Mass Excavator - less than 750 cu. yds.; Mechanical Finishing Machine; Mobile Form Traveler; Motor Patrol, multi-engine; Pipe Mobile Machine; Rubber-tired earth moving equipment (multiple engine, Euclid, Caterpillar and similar type over 50 cu. yds. struck); Rubber tired self-loading Scraper (paddle wheel-auger type self-loading-2 or more units); Rubber-tired Scraper - pushing one another w/o Push Cat. Push-pull (50¢ per hour additional to base rate); Tandem Equipment (2 units only); Tandem Tractor (quad 9 or similar type); Tunnel Mole Boring Machine

Group 9: Canal Trimmer; Canal Trimmer; Helicopter Pilot; Highline Cableway; Remote Controlled Earth Moving Equipment (\$1.00 p/h additional to base rate); Wheel Excavator (over 750 cu. yds.)

TRUCK DRIVERS

Group 1: Warehouseman and Teamster

Group 2: Driver or vehicle or combinations of vehicles of 2 axles (including all vehicles less than six ton); Traffic Control Pilot Car, excluding moving heavy equipment permit load

Group 3: Truck mounted Power Broom

Group 4: Drivers of vehicles or combination of vehicles of 3 axles

Group 5: Bootman; Cement Distributor; Fuel Truck; Road Oil Spreader Truck; Water Truck, 2 axle

Group 6: Dump, of less than 16 yards

Group 7: Transit-mix, under 3 yards; Dumpcrete, less than 64 yards

Group 8: Truck Repairman Helper

Group 9: Water Truck, 3 or more axles

Group 10: 18 and similar type truck when performing within the Teamsters' jurisdiction; Pipeline and utility working truck including Winch, but limited to truck applicable to Pipeline and utility work, where a composite crew is used; Slurry Drives; Truck Greaser and fireman (50¢ per hour additional for fireman)

Group 11: Transit-mix, 3 yards or more; Dumpcrete, 64 yards and over

Group 12: Driver of vehicle or combination of vehicles of 4 or more axles

Group 13: Dump, 16 yards but less than 25 yards

Group 14: A-Frame or Swedish Crane, or similar type of equipment driver; Fork Lift Drivers; Ross Carrier, highway

Group 15: All-off-highway Equipment within Teamsters jurisdiction (off highway combination of vehicles or equipment with multiple power sources, \$1.00 per hour additional); Dump, 25 yards or more; Truck Repairman

Group 16: Truck Repairman Welder

SUPERSEDES DECISION

STATE: California  
 COUNTY: San Diego  
 DATE: Date of Publication  
 DATE: May 20, 1977, in 42 FR 16122.  
 Supersedes Decision No. CA77-5043 dated May 20, 1977, in 42 FR 16122.  
 DESCRIPTION OF WORK: Building Construction (does not include single family homes and garden type apartments up to and including 4 stories), heavy and highway construction and dredging.

POWER EQUIPMENT OPERATORS

Group 1: Brakeman; Compressor (less than 600 C.R.M.); Engineer Oiler; Generator; Heavy Duty Repairman; Helper; Pump; Signalman; Switchman

Group 2: Compressor (600 C.P.M. or larger); Concrete Mixer, skip type, conveyor; Fireman; Hydrostatic Pump; Oiler Crusher (asphalt or concrete plant); Plant Operator; Generator, Pump or Compressor; Rotary Drill Helper (oilfield); Skiploader - wheel type up to 3/4 yd. w/o attachments; Soils Field Technician; Tar Pot Fireman; Temporary Heating Plant; Trenching Machine Oiler; Truck Crane Oiler

Group 3: A-Frame or Winch Truck; Elevator Operator (inside); Equipment Greaser (track); Ford Ferguson (with dragtype attachments); Helicopter Radioman (ground); Power Concrete Curing Machine; Power Concrete Saw; Power driver Jumbo Form Setter; Ross Carrier (job site); Stationary Pipe Wrapping and Cleaning Machine

Group 4: Asphalt Plant Fireman; Boring Machine; Boxman or Mixerman (asphalt or concrete); Chip Spreading Machine; Concrete Pump (small portable); Bridge type Unloader and Turntable; Dinky Locomotive or Motorcar (up to and including 10 tons); Equipment Greaser (greaser truck); Helicopter Hoist; Highline Cableway Signalman; Hydra-hammer-aero.Stomper; Power Sweeper; Roller (compacting); Screed (asphalt or concrete); Trenching Machine (up to 6 ft.)

Group 5: Asphalt Plant Engineer; Backhoe (up to and including 3/4 yd.); Batch Plant; Bit Sharpener; Concrete Joint Machine (canal and similar type); Concrete Planer; Deck Engine; Derrickman (oilfield type); Drilling Machine Operator (including water wells); Forklift (under 5-ton capacity); Hydrographic Seeder Machine (straw, pulp or seed); Machine Tool Operator; Maginlis Internal Pull Slab Vibrator; Mechanical Finisher (concrete-Clary, Johnson, Bidwell or similar); Pavement Breaker (truck mounted); Road Oil Mixing Machine; Roller (asphalt or finish); Rubber-tired Earth Moving Equipment (single engine, up to and including 25 yds. struck); Self-propelled tar Pipelining Machine; Slip Form Pump (power-driven hydraulic lifting device for concrete forms); Skiploader (Crawler and wheel type over 3/4 yd. and up to and including 14 yds.); Stinger Crane (Austin-Western or similar type); Tractor-bulldozer, Tamper Scraper (single engine, up to 100 h.p., flywheel and similar types, up to and including D-5 and similar types); Tugger Hoist 1 drum; Tunnel Locomotive (over 10 and up to and including 30 tons); Welder-general

POWER EQUIPMENT OPERATORS (Cont'd)

Group 6: Asphalt or Concrete Spreading (tamping or finishing); Asphalt Paving Machine (Barber Greene or similar type); Bridges Crane Operator; Cast-In-place Pipe Laying Machine; Combination Mixer and Compactor (gunite work); Compactor, self-propelled; Concrete Mixer - paving; Concrete Pump (truck mounted); Crane Operator up to and including 25 ton capacity; (Long-boom pay applicable); Crushing Plant; Drill Doctor; Elevating Grader; Forklift (over 5 tons); Grade Checker; Grade-all; Grouting Machine; Heading Shield; Heavy Duty Repairman; Hoist Operator (Chicago Boom and similar type); Kolman Belt Loader and similar type; Letourneau Blob Compactor or similar type; Lift Mobile; Lift Slab Machine (Vagborg and similar types); Loader (Athey, Euclid, Sierra and similar type); Material Hoist; Mucking Machine (1/4 yd. rubber tired, rail or track type); Pneumatic Concrete Placing Machine (Hackley-Presswell or similar type); Pneumatic Heading Shield (tunnel); Pumpcrete Gun; Rotary Drill (excluding caisson type); Rubber-tired Earth Moving Equipment (single engine-caterpillar); Euclid, Athey Wagon, and up to and including 50 cu. yds. struck; Rubber-tired Earth Moving Equipment (multiple engine, up to and including 25 yds. struck); Rubber-tired Scraper (self-loading-paddle wheel type-John Deere, 1040 and similar single unit); Skiploader (crawler and wheel type-over 1 1/2 yds., up to and including 6 1/2 yds.); Surface Heaters and Planer; Trenching Machine (over 6 ft. depth capacity); Tower Crane; Tractor Compressor Drill Combination; Tractor (any type larger than D-5-100 flywheel h.p. and over, or similar); Hull-doser, Tamer, Scraper and Push Tractor single engine; Tractor (boom attachments); Traveling Pipe Wrapping, Cleaning and Bending Machine; Tunnel Locomotive (over 30 tons); Shovel, Backhoe, Dragline, Clamshell (over 3/4 yd. and up to 5 cu. yds. m.f.c.) (long boom pay applicable); Self-propelled Curb and Gutter Machine

POWER EQUIPMENT OPERATORS (Cont'd)

Group 7: Crane, over 25 ton up to and including 100 tons m.f.c. (long boom pay applicable); Derrick Barge (long boom pay applicable); Dual Drum Mixer; Heavy Duty Repairman-welder Combination; Hoist, Stiff-legs, Guy Derrick or similar type, up to and including 100 tons (long boom pay applicable); Monorail Locomotive (diesel), gas or electric; Motor Patrol-blade Operator (single engine); Multiple Engine Tractor (Euclid and similar type, except quad 9 Cat); Rubber-tired Earth Moving Equipment (single engine, over 50 yds. struck); Rubber-tired Earth Moving Equipment (multiple engine, Euclid, Caterpillar and similar) (over 25 yds. and up to 50 cu. yds. struck); Shovel, Backhoe, Dragline, Clamshell (over 5 cu. yds. m.f.c.) (long boom pay applicable); Tower Crane Repairman; Tractor Loader (crawler and wheel type over 6 1/2 yds.); Welder-certified; Woods Mixer and similar Pugmill Equipment

Group 8: Auto Grader; Automatic Slip Form; Crane-over 100 tons (long boom pay applicable); Hoist-stiff Legs, Guy Derrick or similar types (capable of hoisting 100 tons or more) (long boom pay applicable); Mass Excavator - less than 750 cu. yds.; Mechanical Finishing Machine; Mobile Form Traveler; Motor Patrol, multi-engine; Pipe Mobile Machine; Rubber-tired earth moving equipment (multiple engine, Euclid, Caterpillar and similar type over 50 cu. yds. struck); Rubber tired self-loading Scraper (paddle wheel-auger type self-loading-2 or more units); Rubber-tired Scraper - pushing one another w/o Push Cat. Push-pull (50¢ per hour additional to base rate); Tandem Equipment (2 units only); Tandem Tractor (quad 9 or similar type); Tunnel Mole Boring Machine

Group 9: Canal Liner; Canal Trimmer; Helicopter Pilot; Highline Cableway; Remote Controlled Earth Moving Equipment (\$1.00 p/h additional to base rate); Wheel Excavator (over 750 cu. yd.)

Group 5; Asphalt Plant Engineer; Backhoe (up to and including 3/4 yd.); Batch Plant; Bit Sharpener; Concrete Joint Machine (canal and similar type); Concrete Planer; Deck Engine; Derrick-man (oilfield type); Drilling Machine Operator (including water wells); Forklift (under 5-ton capacity); Hydrographic Seeder Machine (straw, pulp or seed); Machine Tool Operator; Maginnis Internal Pull Slab Vibrator; Mechanical Bera, Curb or Gutter (concrete or asphalt); Mechanical Finisher (concrete-clay); Johnson, Bidwell or similar; Pavement Breaker (truck mounted); Road Oil Mixing Machine; Roller (asphalt or finish); Rubber-tired Earth Moving Equipment (single engine, up to and including 25 yds. struct); Self-propelled Tar Pipelining Machine; Slip Form Pump (power-driven hydraulic lifting device for concrete forms); Skiploader (Crawler and wheel type over 3/4 yd. and up to and including 1 1/4 yds.); Stinger Crane (Austin-Western or similar type); Tractor-bulldozer, Tamper Scraper (single engine, up to 100 h.p., flywheel and similar types, up to and including D-5 and similar types); Tugger Hoist 1 drum; Tunnel Locomotive over 10 and up to and including 30 tons); Welder-general

POWER EQUIPMENT OPERATORS (Cont'd)

Group 6; Asphalt or Concrete Spreading (tamping or finishing); Asphalt Paving Machine (Barber Greene or similar type); Bridge Crane Operator; Cast-in-place Pipe Laying Machine; Combination Mixer and Compressor (gunite work); Compactor, self-propelled; Concrete Mixer - paving; Concrete Pump (truck mounted); Crane Operator up to and including 25 ton capacity (Long-boom pay applicable); Crushing Plant; Drill Doctor; Elevating Grader; Forklift (over 5 tons); Grade Checker; Grade-all; Grouting Machine; Heading Shield; Heavy Duty Repairman; Hoist Operator (Chicago Boom and similar type); Kolman Belt Loader and similar type; LeTourneau Blob Compactor or similar types; Lift Mobile; Lift Slab Machine (Vagborg and similar types); Loader (Atthey, Euclid, Sierra and similar type); Material Hoist; Mucking Machine (1/4 yd. rubber tired, rail or track type); Pneumatic Concrete Placing Machine (Hackley-Presswell or similar type); Pneumatic Heading Shield (tunnel); Pumpcrete Gun; Rotary Drill (excluding caisson type); Rubber-tired Earth Moving Equipment (single engine-Caterpillar, Euclid, Atthey Wagon, and similar types with any and all attachments over 25 yds. and up to and including 50 cu. yds. struct); Rubber-tired Earth Moving Equipment (multiple engine, up to and including 25 yds. struct); Rubber-tired Scraper (self-loading-paddle wheel type-John Deere, 1040 and similar single unit); Skiploader (crawler and wheel type-over 1 1/4 yds., up to and including 6 1/4 yds.); Surface Heaters and Planer; Trenching Machine (over 6 ft. depth capacity); Tower Crane; Tractor Compressor Drill Combination; Tractor (any type larger than D-5-100 flywheel h.p. and over, or similar) Bull-dozer, Ramper, Scraper and Push tractor single engine); Tractor (boom attachments); Traveling Pipe Wrapping, Cleaning and Bending Machine; Tunnel Locomotive (over 30 tons); Shovel, Backhoe, Dragline, Clamshell (over 3/4 yd. and up to 5 cu. yds. m.r.c.) (Long Boom pay applicable); Self-propelled Curb and Gutter Machine

NOTICES

POWER EQUIPMENT OPERATORS (Cont'd)

Group 7; Crane, over 25 ton up to and including 100 tons m.r.c. (long boom pay applicable); Derrick Barge (long boom pay applicable); Dual Drum Mixer; Heavy Duty Repairman-welder Combination; Hoist, Stiff-legs, Guy Derrick or similar type, up to and including 100 tons (long boom pay applicable); Monorail Locomotive (diesel), gas or electric); Motor Patrol-blade Operator (single engine); Multiple Engine Tractor (Euclid and similar type, except quad 9 Cat); Rubber-tired Earth Moving Equipment (single engine, over 50 yds. struct); Rubber-tired Earth Moving Equipment (multiple engine, Euclid, Caterpillar and similar) (over 25 yds. and up to 50 cu. yds. struct); Shovel, Backhoe, Dragline, Clamshell (over 5 cu. yds. m.r.c.) (long boom pay applicable); Tower Crane Repairman; Tractor Loader (crawler and wheel type over 6 1/4 yds.); Welder-certified; Woods Mixer and similar Pugmill Equipment

Group 8; Auto Grader; Automatic Slip Form; Crane-over 100 tons (long boom pay applicable); Hoist-stiff Legs, Guy Derrick or similar types (capable of hoisting 100 tons or more) (long boom pay applicable); Mass Excavator - less than 750 cu. yds.; Mechanical Finishing Machine; Mobile Form Traveler; Motor Patrol, multi-engine); Pipe Mobile Machine; Rubber-tired earth moving equipment (multiple engine, Euclid, Caterpillar and similar type over 50 cu. yds. struct); Rubber tired self-loading Scraper (paddle wheel-auger type self-loading-2 or more units); Rubber-tired Scraper - pushing one another w/o Push Cat. Push-pull (50¢ per hour additional to base rate); Tandem Equipment (2 units only); Tandem Tractor (quad 9 or similar type); Tunnel Mole Boring Machine

Group 9; Canal Liner; Canal Trimmer; Helicopter Pilot; Highline Cableway; Remote Controlled Earth Moving Equipment (\$1.00 p/h additional to base rate); Wheel Excavator (over 750 cu. yd.)

DECISION NO. CT77-3132

PAID HOLIDAYS:  
A—New Year's Day; B—Memorial Day; C—Independence Day; D—Labor Day;  
E—Thanksgiving Day; F—Christmas Day;

FOOTNOTES:

- b. 1 paid holiday: Good Friday. Employee must work 3 days during the work week in which the holiday falls, if scheduled, and if scheduled, the working day before and the working day after the holiday.  
c. 4 paid holidays: B, C, D, and Good Friday. Employee must be employed 14 consecutive days immediately prior to the holiday.  
d. 3 paid holidays: C, D, and E  
e. 4 paid holidays: B, C, D, and E  
f. 3 paid holidays: B, C, D, and D  
h. The last 4 regular working hours prior to Christmas Day shall be a paid half day.  
i. 6 paid holidays: A through F  
j. Employer contributes 4% of basic hourly rate for 5 years or more of service or 2% basic hourly rate for 6 months to 5 years of service as vacation pay credit.  
k. 9 paid holidays: A through F, Washington's Birthday, Good Friday, and Columbus Day  
l. 9 paid holidays: A thru F, Washington's Birthday, Good Friday and Columbus Day  
m. The last 4 hours on Christmas Eve is a paid half day if employee has worked 5 consecutive days prior to Christmas Eve  
n. 9 paid holidays: A through F, Washington's Birthday, Good Friday and Christmas Eve provided the employee has worked 45 full days for the employer during the 120 days prior to the holiday and is available for work the day preceding and following the holiday.  
o. 9 paid holidays: A through F, Washington's Birthday, Good Friday and a floating holiday per year provided the employee has been employed for a period of 5 working days prior to the holidays and works the scheduled work days immediately preceding and following the holidays  
p. 2 paid holidays: C and D providing the employee works the day before and the day after the holiday  
q. 4 paid holidays: B, C, D, and E providing the employee works the day before and the day after the holiday  
r. 1 paid holiday: D  
s. Paid holidays: D, and the Friday after Thanksgiving is a paid half day, and December 24, provided it falls on a working day, is a paid half day  
t. 3 paid holidays: C, D, E, and the half day Friday after Thanksgiving  
u. 1 paid holiday: D  
v. 2 paid holidays: B, D & Half day paid holiday the Friday after Thanksgiving and the last working day before Christmas, & Good Friday paid half day.

SPRINKLER FITTERS	5.14	.25				
TILE SETTERS	4.97	.25				
TRUCK DRIVERS:						
Up to 6 tons			.30			
Helpers			.30			
WELDERS - receive rate prescribed for craft performing operation to which welding is incidental.						

FOOTNOTES:  
a - Employer contributes 1/2 of  
basic hourly rate for over 5  
years' service and 2 1/2 of basic  
hourly rate for 6 months to  
5 years service at Vacation  
Pay Credit. Six Paid Holidays  
A thru F  
b - Seven paid holidays - A thru G  
PAID HOLIDAYS:  
A- New Year's Day; B- Memorial  
Day; C- Independence Day; D-  
Labor Day; E- Thanksgiving Day;  
F- Christmas Day; G- Friday  
after Thanksgiving

DECISION NO. IAT7-4223

POWER EQUIPMENT OPERATORS CLASSIFICATION DEFINITIONS

GROUP 1 - Cranes, including those being used as backhoe, dragline, clamshell,  
etc.; tower cranes; truck cranes and cherry pickers 12 1/2 ton & over rated cap-  
acity; derricks; piledrivers and extractors; caisson rigs; side boom and winch  
truck used for erection of structural steel and moving and setting of heavy  
machinery; 3 drum hoists; welders; mechanics; locomotive; dredge (levermen)  
GROUP 2 - 1 and 2 drum hoists; air and electric tuggers (on power plants or  
setting steel and grating); automobiles; plant mixers; farm type tractors  
(with loaders, backhoes, attachments, etc.); scrapers (tournapull, etc.);  
endloaders; dredge (engineer); side boom and winch truck other than Group  
No. 1; motor patrol; bulldozers; push cat; truck cranes and cherry pickers  
(under 12 1/2 tons); concrete mixers (1 yard and over); ditching machine (8"  
and over); fork lifts (on steel erection and machinery moving or hoisting above  
one complete story); concrete pump; dewatering pumps; temporary hoist cage  
operated; second man on locomotive; vibrating concrete spreader (Gomaco,  
C-450 or equal)  
GROUP 3 - Tractors (under 35 HP) with or without attachments; endloaders (under  
35 HP) with or without attachments; air compressors (one or a combination of  
250 cfm or more); pumps 3" or over; welding machine 600 amps or combination  
thereof; conveyors; firemen (boiler); generator (75 KW & over); fork lifts  
(other than above Group No. 2); gunnite machine; self-propelled rollers; stump  
chippers; self-propelled tampers; air and electric tuggers (other than above);  
ditching machine under 8"  
GROUP 4 - Oilers; mechanical heaters; truck crane drivers; permanent elevators

STATE: Ind. COUNTY: Cotto Gord. (City of Marion City)  
DECISION NO.: IAT7-4224 DATE: Date of Publication: 23/03  
SUPERSEDES: Decision No. IAT7-4090, dated May 6, 1977, in re: 23/03  
DESCRIPTION OF WORK: Building Construction (does not include family  
houses and garden type apartments up to and including 4 stories.)

BUILDING, WATER TREATMENT PLANTS  
& SPACE DISPOSAL PLANTS CON-  
STRUCTION

	Basic Hourly Rates	Fringe Benefits Payments			
		H & W	Pensions	Vacation	Education and/or Appr. Tr.
BUILDING, WATER TREATMENT PLANTS & STORAGE DISPOSAL PLANTS CON- STRUCTION					
POWER EQUIPMENT OPERATORS :					
GROUP 1	\$ 9.45	.40	.50		.08
GROUP 2	8.05	.40	.50		.08
GROUP 3	7.00	.40	.50		.08

GROUP 1 - All hoists or steel erecting equipment; Cranes, Shovel, Clanshelli, Drag-  
line, Backhoe, Derricks, Tower Crane, Cable Way, Concrete Spreader (servicing 2  
pavers), Asphalt Spreader, Asphalt Mixer Plant Engineer, Dipper Dredge Operator,  
Dipper Dredge Foreman, Dual Purpose Truck (boom or winch), Leveaux or Engineer  
(Hydraulic dredge), Mechanic, Paving Mixer with tower attached (2 operators re-  
quired), Pile Driver, Hoop Tractor, Stationary, Portable or Floating Mixing Plant,  
Trenching Machine (over 40 HP), Building Hoist (2 drums), Hot Paint Wrapping Machine,  
Cleaning & Trimming Machine, Backfiller (throw bucket), Locomotive Engineer, Qualified  
Welder, Tow or Push Boat, Concrete Paver, Schuman Trav-L-Plant or similar machines,  
CHI Autograder or similar machines, Slip Form Paver, Caisson Augering Machine, Muck-  
ing Machine, Asphalt Heater-Plaster Unit, Hydraulic Cranes, Mine Hoists; Atley, Bar-  
ber-Green, Euclid or Haisco Loader, Asphalt Pug Mill, Fireman & Drier, Concrete Pump,  
Concrete Spreader (servicing 1 paver); Bulldozers, Endloader, Log Chippers or similar  
machines, Elevating Grader, Group Equipment Greaser, LeTourneaupull & similar mach-  
ines, Ditch-10, Hydrate Wrench & similar machines, Motor blade, Power blade, Push Cat,  
Tractor Pulling Elevating Grader or Power Blade, Tractor Operating Scoop or Scraper,  
Tractor with Power Attachments, Roller on Asphalt or Blacktop, Single Drum Hoist,  
Jagter Mix & Place Machine, Pipe Bending Machine, Plexaplane or similar machines,  
Automatic Curbing Machine, Automatic Cement & Gravel Batch Plants (1 stop set-up),  
Seaman Pulv-Mixer or similar machines, Asphalt Self-Propelled Rotary Drill or  
similar machines, Work Boat, Combination Concrete Finishing Machine & Placet, Self-  
Propelled Sheep Foot Roller or Compactor (used in conjunction with a Grading Spread),  
Asphalt Spreader or Compactor (used in conjunction with a Grading Spread),  
lift (over 6000 lbs. cap. or working at heights above 28 ft.), Concrete Conveyors

GROUP 2 - Asphalt Rooster, Fireman & Pump Operator at Asphalt Plant, Mud Jack, Under-  
ground Boring Machine, Concrete Finishing Machine, Form Grader with Roller on Earth-  
Mixer (3 bag to 165), Power Operated Full Float, Tractor without Power Attachments,  
Dope Pot (agitator motor), Dope Chop Machine, Distributor (back end), Straddle  
Carrier, Portable Machine Fireman, Hydro-Blammer, Power Winch on Paving Hoist, Self-  
Propelled Roller or Compactor (other than provided for above), Pump Operator (more  
than 1 well point pump), Portable Crusher operators, Trench Machine (under 40 HP),  
Power Subgrader (on forms) or similar machines, Forklift (6000 lbs. or less cap-  
acity), Gypum Compactor (275 CPM or over), Driver on Truck Crane or similar mach-  
ines; Light Plant, Mixers (1 or 2 bag), Power Batching Machine (Cement Auger or Con-  
veyor), Boiler (Engineer or Fireman), Water Pumps, Mechanical Broome (Cement Auger or Con-  
& Gravel Batch Plants (2 or 3 stop set-up), Self-Propelled Ruffing Machine  
cluding backhoes or endloaders), Self-Propelled Boring Machine

GROUP 3 - Other, Mechanic's Helper, Mechanical Heater (other than steam boiler), Belt  
Machine, Small Outboard Motor Boat, Engine Driven Welding Machine

POWER EQUIPMENT OPERATORS					
GROUP 1	\$ 9.45	.40	.50		.08
GROUP 2	8.05	.40	.50		.08
GROUP 3	7.00	.40	.50		.08

POWER EQUIPMENT OPERATORS CLASSIFICATION DEFINITION

GROUP 1 - All hoists or steel erecting equipment; Crane, Shovel, Gianshell, Dragline, Backhoe, Derrick, Tower Crane, Cable Way, Concrete Spreader (servicing 2 pavers), Asphalt Spreader, Asphalt Mixer Plant Engineer, Dipper Dredge Operator, Jigger Dredge Crane, Dual Purpose Truck (boom or winch), Laverman or Engleman (hydraulic dredge), Mechanic, Paving Mixer with tower attached (2 operators required), Pile Driver, Boom Tractor, Portable or Floating Mixing Plant, Trenching Machine (over 40 HP), Building Hoist (2 drums), Hot Paint Wrapping Machine, Cleaning & Priming Machine, Backfiller (throw bucket), Locomotive Engineer, Qualified Welder, Tow or Push Boat, Concrete Paver, Seaman Trowl-Plant or similar machines, CHI Autograder or similar machines, Slip Form Paver, Caisson Augering Machine, Rucking Machine, Asphalt Heater-Planer Unit, Hydraulic Grader, Mine Hoists; Athey, Barber-Greene, Euclid or Hauler Loader, Asphalt Pug Mill, Fireman and Driver, Concrete Pump, Concrete Spreader (servicing 1 paver), Bulldozer, Endloader, Log Chippers or similar machines, Elevating Grader, Group Equipment Greaser, LeTourneau pull and similar machines, DM-10, Hyater Winch & similar machines, Motor Patrol, Power Blade, Push Cat, Tractor Pulling Elevating Grader or Power Blade, Tractor Operating Scoop or Roller, Jaeger Mix & Place Machine, Pipe Bending Machine, Flexaplane or similar machines, Automatic Curbing Machine, Automatic Cement and Gravel Batch Plants (1 stop set-up), Seaman Pulvi-Mixer or similar machines, Blastholer Self-propelled Rocky Drill or similar machines, Work Boat, Combination Concrete Finishing Machine & Float, Self-propelled Sheepsfoot Roller or Compactor (used in conjunction with Grading Spread), Asphalt Spreader Screen Operator, Apaco Spreader or similar machine, Stusher, Forklift (over 6000 lbs. capacity or working at heights above 26 ft.), Concrete Conveyors

GROUP 2 - Asphalt Booster, Fireman and Pump Operator at Asphalt Plant, Mud Jack, Underground Horing Machine, Concrete Finishing Machine, Form Grader with Roller on Earth, Mixers (3 bag to 162), Power Operated Bull Float, Tractor without Power Attachment, Dope Pot (epitacating Motor), Dope Chop Machine, Distributor (Back end), Straddle Carrier, Portable Machine Fireman, Hydro-Hammer, Power Winch on Paying Work, Self-propelled Roller or Compactor (other than provided for above), Pump Operator (more than 1 wall point pump), Portable Grubber Operator, Trench Machine (under 40 HP), Power Subgrader (on forms) or similar machines, Forklift (6000 lbs. or less capacity), Cypsum Pump, Conveyor over 20 HP, Fuller Kenyon Cement Pump or machines, Light Plant, Mixers (1 or 2 bag), Power Batching Machine (Cement Auger or Conveyor), Roller (Engineer or Fireman), Water Pumps, Mechanical Room, Automatic Cement & Gravel Batch Plants (2 or 3 stop set-up), Small Rubber-tired Tractors (not including dozers or endloaders), Self-propelled curing machine

GROUP 3 - Oiler, Mechanic's Helper, Mechanical Heater (other than steam boiler), Belt Machine, Small Outboard Motor Boat, Engine Driven Welding Machine

SUPPLEMENTAL DECISION

## POWER EQUIPMENT OPERATORS:

	Basic Hourly Rates	Fringe Benefits Payments			Education and/or Appr. Tr.
		H & W	Pensions	Vacation	
Group 1	9.56				
Group 2	9.435	.50	.50		.05
Group 3	8.59	.50	.50		.05
Group 4	8.265	.50	.50		.05

## CLASSIFICATION DEFINITIONS

## POWER EQUIPMENT OPERATORS

Group 1 - Cranes, including those being used as backhoe, dragline, clamshell, etc.; tower cranes and cherry pickers over 15 ton rated capacity; derrick, pile-drivers and extractors; calisson tigs; side boom and winch truck used for erection of structural steel and moving and setting of heavy machinery; 3 drum hoist; welders; mechanics; locomotive; dredge (levetmen)

Group 2 - 1 and 2 drum hoists; air and electric tuggers (on power plants or setting steel or grating); econobiles; plant mixers; farm type tractors (with loaders, backhoes, attachments, etc.); scrapers (tounepull, etc.); endloaders; dredge (engineer); side boom and winch truck other than Group No. 1; motor patrol; bulldozers; push cat; truck cranes and cherry pickers (15 tons and under); concrete mixers (1 yard and over); ditching machine (8' and over); fork lifts (on steel erection and machinery moving or hoisting above one complete story); concrete pump; dewatering pump; temporary hoist cage operated; second man on locomotive

Group 3 - Tractors (under 35 HP) with or without attachments; endloaders (under 35 HP) with or without attachments; air compressors (over 125 CFM); Pumps 3" or over; welding machines 600 amps or combination thereof; conveyors; firemen (boiler); generator (75 K.W. and over); fork lifts (other than above Group No. 2); gunnite machine; self-propelled rollers; stump chippers; self propelled tampers; air and electric tuggers (other than above); ditching machine under 8"

Group 4 - Oilers; mechanical heaters; truck crane drivers; permanent elevators

## SUPERSEDES DECISION

STATE: Iowa

COUNTY: Scott

DECISION NO.: IA77-4232

DATE: Date of Publication

Supersedes Decision No. IA76-4172, dated October 15, 1976 in LI F1 15802

DESCRIPTION OF WORK: Building Const. including construction of sheltered enclosures with walk-in access for the purpose of housing persons, machinery, equipment or supplies; all construction of such structures; the installation of utilities and equipment both above & below ground level; all excavation & foundations; site preparation & incidental paving & utilities. (exclude single family homes and garden type apartments up to and including 4 stories)

WEIDERS: receive rate prescribed for craft performing operation to which welding is incidental.

## FOOTNOTE:

a-Employer contributes 1/4 of basic hourly rate for over 5 years service and 2/4 of basic hourly rate for 6 months to 5 years service as Vacation Pay Credit. Also 6 paid holidays - New Years Day, Memorial Day, Independence Day, Labor Day, Thanksgiving Day, Christmas Day

DECISION NO. IA77-4232

LABORERS CLASSIFICATION DEFINITIONS

GROUP 1 - Carpenter tenders, common laborers, mason tenders

GROUP 2 - Concrete saw, pipesetters, plumber laborer, power tools (barco-vibrator-motor mixers-dynamite handiers-burner on dismantling work to be junked), prime movers, sand point.

GROUP 3 - Caissons after 6' depth, dynamite men, tunnel miners

POWER EQUIPMENT OPERATORS CLASSIFICATION DEFINITIONS

GROUP 1 - Hoists or steel erecting equip.; crane, shovel, clamshell, dragline, backhoe, derrick, tower crane, cableway, concrete spreader, asphalt spreader, asphalt mix plant, dipper dredge, dipper dredge crane, dual purpose truck (boom or winch), leverman or Eng. (hydraulic dredge), mechanic, paving mixer w/tower att., pile driver, boom tractor, mixing plane, trenching mach. over 10 H.P., bulldozing hoist (2 drums), hot paint wrapping mach., cleaning & priming mach., backfiller (throw bucket), locomotive, welder, tow or push boat, concrete paver, seaman travel-plant or similar mach., CHI autograder, slip form paver, calisson augering mach., asphalt header-planer unit, hydraulic crane, mine hoists, loader (athey, barter-green, euclid or hais), asphalt pug-mill, fireman, drier, concrete pump, bulldozer, end-loader, log chippers or similar mach., elevating grader, group equip., grader, L-tournepull & similar mach., DM-10, Hyster winch & similar mach., motor patrol, power blade, push cat, tractor pulling elevating grader or power blade, tractor operating scoop or grader, tractor w/power att., roller on asphalt or black top, 1 drum hoist, Jager mix & place mach., pipe bending mach., flexplane or similar mach., auto. curbing mach., auto. cement & gravel batch plant (1 stop set-up), seaman pulvi-mixer or similar mach., blastholer, self-prop rotary drill or similar mach. work boat, comb. conc.rete finishing mach & float, self-prop. sheep foot roller (used in con). w/a grading spread, asphalt spreader screed, Anasco spreader or similar mach., slusher, forklift (over 6000 lbs. cap. or above 28'), concrete conveyors.

GROUP 2 - Asphalt rooster, fireman & pump at asphalt plant, mud jack, underground boring mach., concrete finishing mach., form grader w/roller on earth, mixers 93 bag to 16F), Power op bull float, tractor w/o power att., dope pot agitating motor, dope chop mach., distributor (back end), straddle carrier, portable mach. fireman, hydro-hammer, power winch on paving work, self-prop roller or compactor (other than above), pump op. more than 1 well point pump, portable crusher, trench mach. under 10 H.P., power subgrader on forms, forklifts 6000 lbs or less cap., gypsum pump, conveyor over 20 HP, Fuller Kenyon cement pump or similar mach., Air compressor 275 cfm or over, truck crane or similar mach., light plant, mixers 1-2 bags, power batching mach. (cement, auger or conveyor), boiler eng. or fireman, water pump, mech. broom, auto. cement 7 travel batch plant 2-3 stop set-up, small rubber tired tractor, self-propelled curing machine.

GROUP 3 - Oiler, mechanic helper, mechanical heater other than steam boiler, belt machine, small outboard motor boat, engine driven welding machine.

TRUCK DRIVERS CLASSIFICATION DEFINITIONS

GROUP 1 - 4 wheel trucks, dumptrucks, scooptobles 5 c.y. & under or under 7 1/2 T., mixer trucks 3 c.y. & under, air compressors & welding mach., batch trucks 2-34 catches or less, driver helpers, mechanics helpers, Greasers, dumpsters, pallet type fork lift, pilot truck. GROUP 2 - 4 wheel trucks over 5 c.y. or 7 1/2 T. 6-wheel trucks - Kohring or similar dumpsters. Track trucks - euclids - tournapulls - hugbottom dumps - tournatrails - tournatrollers or similar equip. when used for trans., under 9 c.y. or 13 1/2 T., tandems & semi-trailer service trucks, mixer trucks over c.y. \$ including 6 1/2 c.y. or 13 1/2 T., fork lift, 4-wheel A-frame trucks used for trans., 4-wheel winch trucks, pavement breakers, batch trucks over 2-4 3/4 batches GROUP 3 - heavy equip. over 9 c.y. or 13 1/2 T. trucks licensed for 50,000 lbs. to & incl. 10 c.y. or 24 T. - track trucks - semitrailer water trucks - euclids - hug-bottom dumps - tournatrails - tournatrollers - tractor trailers - tandem A-frames - tandem winch trucks - hydro lift trucks or similar equip. used for trans., mixers over 6 1/2 c.y., batch trucks over 4-3 1/2 batches, single axle lowboy trailers, 6-wheel pole trailers, 2 man oil distributors. GROUP 4 - heavy equipment over 9 c.y. or 24 T. such as Kohring dumpsters - track trucks - euclids - hug-bottom dumps - tournapulls - tournatrollers or similar equip. used for trans., 1 man oil distributors, pole trailers over 6 wheels, water pulls, lowboy trailers, tandem axle or more no we ght limitation, diesel & heavy equipment mechanics

POWER EQUIPMENT OPERATORS CLASSIFICATION DEFINITIONS FOR ZONE 1

GROUP 1 - All hoists or steel erecting equipment; Crane, Shovel, Clamshell, Dredge line, Backhoe, Derrick, Tower Crane, Cableway, Concrete Spreader (servicing 2 pavers), Asphalt Spreader, Asphalt Mixer Plant Engineer, Dipper Dredge Operator, Dipper Dredge Crane-man, Dual Purpose Truck (boom or winch), Leverman or Engineer (hydraulic dredge), Mechanic, Paving Mixer with tower attached (2 operators required), Pile Driver, Boom Tractor, Stationary, Portable or Floating Mixing Plant, Trenching Machine (over 40 HP), Building Hoist (2 drums), Hot Paint Wrapping Machine, Cleaning & Trimming Machine, Backfiller (throw bucket), Locomotive Engineer, Qualified Welder, Tow or Push Boat, Concrete Paver, Seaman Truss-L-Plant or similar machines, CMI Autograder or similar machines, Slip Form Paver, Calson Augering Machine, Asphalt Heater-Planer Unit, Hydraulic Crane, Mine Hoist; Athey, Barber-Greene, Euclid or Hais Loader, Asphalt Pug Mill, Fireman and Driver, Concrete Pump, Concrete Spreader (servicing 1 Paver), Bulldozer, Endloader, Log Chippers or similar machines, Elevating Grader, Group Equipment Greaser, Latourneapull & similar machines, DH-10, Hvacr Vnch & similar machines, Motor Patrol, Power Blade, Push Gat, Tractor Pulling Elevating Grader or Power Blade, Tractor Operating Scoop or Scraper, Tractor with Power Attachments, Roller on Asphalt or Blacktop, Single Drum Molt, Jaeger Mix & Place Machine, Pipe Bending Machine, Flexaplane or similar machines, Automatic Drilling Machine, Automatic Cement & Gravel Batch Plants (1 scoop set-up), Seaman Pulvi-Mixer or similar machines, Blasthole Self-propelled Rotary Drill or similar machines, Work Boat, Combination Concrete Finishing Machine & Float, Self-propelled Sheep Foot Roller or Compactor (used on conjunction with a Grading Spread), Asphalt Spreader Screed Operator, Apaco Spreader or similar machines, Slusher, Forklift (over 6000 lbs. cap. or working at heights above 28 ft.), Concrete Conveyors

GROUP 2 - Asphalt Rooster, Fireman & Pump Operator at Asphalt Plant, Mud Jack, Underground Boring Machine, Concrete Finishing Machine, Form Grader with Roller on Earth, Mixers (3 bag to 16E), Power Operated Bull Float, Tractor without Power Attachments, Dope Pot agitator motor, Dope Chop Machine, Distributor (back end), Straddle Carrier, Portable Machine Fireman, Hydro-Banner, Power Winch on Paving Work, Self-propelled Roller or Compactor (other than provided for above), Pump Operator (more than 1 well point pump), Portable Greaser Operator, Trench Machine (under 40 HP), Power Subgrader (on forms) or similar machines, Forklift (6000 lbs. or less cap.), Gypsum Pump, Conveyor over 20 HP, Fuller Canyon Cement Pump or similar machines; Air Compressor (275 cfm or over), Driver on Truck Crane or similar machines, Light Plant, Mixers (1 or 2 bag), Power Latching Machine (Cement Auger or Conveyor), Boiler (Engineer or Fireman), Hacer Pump, Mechanical Broom, Automatic Cement and Gravel Batch Plants (2 or 3 scoop set-up), Small Rubber-tired Tractors (not including backhoes or end loaders), Self-propelled curing machine

GROUP 3 - Oiler, Mechanic's Helper, Mechanical Heater (other than steam boiler), Self Machine, Small Outboard Motor Boat, Engine Driven Welding Machine

Basic Hourly Rates	Fringe Benefits Payments				Education and/or Appr. Tr.
	H & W	Pensions	Vacation		

POWER EQUIPMENT OPERATORS CLASSIFICATION DEFINITIONS FOR ZONES 5, 6, 7, 8, and 9

GROUP I - Power Shovel, Crane, Backhoe and Dragline; Dredge Engineer, Dredge Leverman; Hoisting Engineer (Steel Erection); Motor Patrol (Finish); Piledriver Machine; Master Mechanic; Sideboom Tractor; Horizontal Boring Machine

GROUP II - Central Mix Plant; Paver or Self-propelled Spreader; Tow or Push Boat; C.M.I. Paver; C.M.I. Subgrader (or equivalent); Asphalt Plant; Scraper (over 12 c.y.); Bulldozer (Finish); Push Gat; Churn or Rotary Drill; Trenching Machine (Cleveland 80 or similar capacity); Asphalt Laydown; Asphalt Screed; Asphalt Heater-Planer; Concrete Pump; Self-propelled Curb Machine

GROUP III - Motor Patrol (Rough); Front End Loader (3 c.y. or over); Scraper (12 c.y. & under); Bulldozer (Rough); Asphalt Roller; Mechanics-Welders; Group Equipment Greaser; Concrete Curb Breaking Machine; Concrete Widening Machine; Paving Breaker; Barber-Greene, Hais Loader or similar machine; Crawler Tractor Pulling Ripper, Disc, Sheepfoot or Flat Roller; Self-propelled Sheepfoot Roller; Self-propelled Roller, Distributor; Screening and Washing Plant; Self-propelled Vibrating Compactor; Trenching Machine (other than above); Steel Paving Machine; Conveyor; Finishing Machine (on Concrete); Flexplane; Bull Float; Form Grader

GROUP IV - Boiler, Mechanical Broom; Oiler or Mechanics Helper or Group Greaser Helper; Farm Type Tractor (pulling disc, harrow or roller); Welding Machine; Pump Operator (other than dredge); Broom and Winch Truck; Compressor; Tank Car Heater (combination boiler and booster); Pumps on Well Points and Deep Wells for Dewatering; Safety Boat; Batch Plant-dry; Spreader Attachments; Utility Tractor With Attachments

DEFINITIONS OF ZONES

Zone 1- City of Waterloo and abutting municipalities; City of Mason City; Polk County; City of Dubuque and abutting municipalities; City of Iowa City and abutting municipalities; Linn County; Pottawattamie County; City of Ames and abutting municipalities; and the City of Fort Dodge

Zone 2- Remainder of Black Hawk County excluding the city of Waterloo and abutting municipalities

Zone 3- City of Clinton and abutting municipalities; City of Burlington and abutting municipalities and the Burlington Ordinance Plant

Zone 4- Scott County

Zone 5- Des Moines, Louisa, and Muscatine Counties (Excluding the City of Burlington and abutting municipalities and the Burlington Ordinance Plant)

Basic Hourly Rates	Fringe Benefits Payments				Education and/or Appr. Tr.
	H & W	Pensions	Vacation		

Zone 6- Buena Vista, Cherokee, Clay, Dickinson, Emmet, Humboldt, Kosuth, Lyon, O'Brien, Osceola, Palo Alto, Plymouth, Pocahontas, and Sioux Counties

PAID HOLIDAYS: A-New Year's Day; B-Memorial Day; C-Independence Day; O-Labor Day; E-Thanksgiving Day; & F-Christmas Day

FOOTNOTES:

67. Includes pension
68. Paid holidays: A through F
69. Employer contributes 4% of regular hourly rate to vacation pay credit for employee who has worked in business more than 5 years, and 2% for employee who has worked in business less than 5 years.
70. When an employee has been employed by an employer for 6 continuous months, the employer will contribute \$5.00 per week toward his hospital/medical premiums if the employee does not have a pre-established hospital/medical plan. If an employee has met the 6 month qualification and is off work for any reason for over 30 continuous calendar days, the employer will not make the above \$5.00 weekly contribution to the employee until the employee returns to work on a regular basis.
71. 6 paid holidays: A through F, provided such employees work the last scheduled day prior to and the next scheduled work day after the holiday unless permission for not working on such days is granted by the employer.
72. 2 paid holidays: C & D
73. 3% of gross earnings to SASMI
74. 6 paid holidays: A through F, providing employee works either the 5 days preceding or the 5 days following the holiday
75. 1. per week per employee
76. Each employee who has been in the employ of the same employer for 1 year & has accumulated 1000 hours of service shall receive 1 week's vacation with pay of 40 hours at straight time; each employee who has been in the employ of the same employer for 10 years or more & has accumulated 1000 hours of service shall receive 3 weeks' vacation with pay of 120 hours at straight time hourly rate.
77. One week's paid vacation after one year's employment; two weeks' paid vacation after three years' employment; three weeks' paid vacation after ten years' employment.
78. One week's paid vacation after three years' employment; two weeks' paid vacation after ten years' employment; & three weeks' paid vacation after fifteen years' employment
